(1723–1792), to proselytize among others such as the Montauk of Long Island (Conkey et al. 1978:181, 185; Frazier 1992). Moravian missionaries also worked among the Mahican of Dutchess County, New York, (Brasser 1978:208) and accompanied them as they moved with the Delaware south and west through Pennsylvania and Ohio during the French and Indian War (Brasser 1978:208). The Narragansett adopted Christianity thanks in larger part to “New Light” minister Joseph Park in the 1730s (Simmons 1983; Simmons and Simmons 1982). Missionaries, including the Jesuit Pierre Biard and his Native converts, found themselves enmeshed in colonial conflicts in the region, pitting the French and English on the Maine (Snow 1980), Massachusetts, and New Hampshire frontiers in the early 1600s and playing pivotal roles in the most famous of all Native rebellions of that era, King Philip’s War, now often called Metacom’s Rebellion (Cogley 2009; Drake 1997, 1999).

The variety of Native responses generated by the impositions of colonial rule (Calloway 1997b) and often forced religious conversion are also recognizable in excavations of Indigenous sites from the late seventeenth and eighteenth centuries (Salisbury 1992). At the mid-seventeenth-century “praying town” of Natick in eastern Massachusetts, grave goods were included in some inhumations, suggesting the survival of Native beliefs about the afterworld (Bigelow 1830; Brenner 1980). In contrast, at the Native cemetery linked to a small Quaker settlement in Dartmouth, Massachusetts, less than 70 miles away, individuals were interred with great simplicity, in keeping with the teachings of that faith (Hodge 2005).

In English-, Dutch-, and Moravian-influenced communities in Connecticut, New York, and Pennsylvania, not only did Algonquians and Iroquoians establish different versions of Christian settlements, but the residents of these settlements maintained ties with one another and with colonial officials (Meuwese 2011; Preston 2008; Richter 1992b). Information derived from translated German records of Moravian missionaries concerning the Wampano (Wyachtonok) division of Mahican has greatly added to scholars’ knowledge of that group and the activities of Protestant and Moravian missionaries (Dally-Starna and Starna 2011; Starna 2013). New data has emerged on missionary activities among the Iroquoian and Great Lakes tribes (Pflug 1992; Schwartz 2008), a short-lived Jesuit outpost targeting the Piscataway in Maryland (Mackie 2006), and the sixteenth-century Spanish mission at Ajacan in eastern Virginia (Brinkhouse 2015).

Natives in the Colonial Economy

Scholars have also learned more about the involvement of Indigenous peoples in the colonial economies and warfare of the English and French. As early as the seventeenth century, Native mariners provided knowledge and crews for the nascent European whaling industry and related trades (Cuffee 1839; Innes 1983; Nicholas 2002; Shoemaker 2015; Strong 1989, 1996; Vickers 1981) (fig. 5). Many Native people also became (or were forced to become) indentured servants, day workers, or itinerant laborers, establishing a pattern that persisted into the nineteenth century (McMullen 1991; McMullen and Handsman 1987; Phillips 1998; Silverman 2001). Many Native men also enlisted as soldiers or served as mercenaries and scouts in the colonial period and after (Carrol 2012; Naumec 2008).

Nineteenth- and Twentieth-Century History

Research since the 1980s has shed perhaps the most light on the late nineteenth- and twentieth-century history of Native communities across the Northeast—communities that survived and later underwent a significant revival, but whose story was little known (Calloway 1997a). Although the original *Northeast* volume (Trigger 1978a) included sections in each tribal chapter regarding this period, the flood of information uncovered since 1980 has raised new questions about cultural continuities and “reinvention,” identity politics, and sovereignty (Gallivan et al. 2011; McMullen 1994, 1996). Inevitably, modern and historic racial consciousness and discrimination and issues of intermarriage among Native Americans, Anglo-Americans, and enslaved and freed African Americans were part of this body of work and remained painful subjects in Native communities (Herndon 1999; Mandell 2010; Simpson 2007).

The biographical approach, an old anthropological practice, remains a fruitful path for capturing the most recent Native history in the region. In addition to the seminal volume *Northeastern Indian Lives, 1632–*

1816 (Grumet 1996), scholars have explored how the better-documented biographies of individual Native people illustrate larger trends in Native experience (Hauptman 1989, 2006b; Koppedrayner 1993; Philbrick 1998). Examples are the biography of an Abenaki healer, Molly Ockett (b. ?, d. 1816), in the disputed territories of northern New Hampshire and southern Maine (B. McBride and Prins 1996), and Wampanoag basket maker Charlotte Mitchell (b. 1848, d. 1930), who linked historic Wampanoag communities to early modern Native advocacy (Simmons 2002).

Language and Literacy Studies

Building on earlier work, linguists have turned their attention to more specialized studies, such as dialectical analyses of northeastern Algonquian languages (Costa 2003, 2007; Goddard 2016; Rudes 1997), reconstructions of certain languages such as Quiripi (Wampano) and Powhatan (Rudes 1997, 2014), pidgin languages in the Northeast (Goddard 1978d, 1997), language contact (Bakker and Papen 2008), and the likelihood of multilingualism (Fiedel 1987, 1999). Beginning with the first contacts in the late 1400s, Native peoples and European explorers and settlers formed new linguistic communities, and new attention has been paid to the role of translators and other Native “cultural brokers” in enabling colonial settlement in the region (Hagedorn 1988, 1995; Richter 1988; Vaughan 2002). Similarly, the work of missionaries who aimed to convert Native speakers to Christianity resulted in a large number of translations of religious works into various northeastern languages, like John Eliot’s and Job Nesutan’s translation of the Old and New Testaments into what was then

called Natick or Massachusetts, now more frequently referred to as Wampanoag (Eliot 1663, 1685).

Multilingual encounters and communities went largely undocumented in the seventeenth century, although a number of early vocabularies and word lists collected by explorers, settlers, and missionaries suggest that new loan words became common in otherwise grammatically traditional languages (Gray 2014). Basque words appeared in Montagnais (Baker 1989), while the Delaware languages (Munsee and Unami) contained words from Dutch (Goddard 1974, 1978b). Similarly, words of Native origin became common in many European languages, particularly among the maritime communities where this kind of knowledge was likely widely shared (Greenblatt 2007).

Protestant missionaries in southern New England, particularly John Eliot (b. 1604, d. 1690), were perhaps the most well-known advocates for Indigenous literacy, arguing that personal access to scripture was essential to sincere conversion (Eliot 1666). Early translations were supplemented by a significant body of documents written by Native speakers themselves (Michelson 1921). Scholars agree that literate Indigenous speakers, who were often bilingual, wielded significant political and social power in Native communities and often acted as liaisons between their own communities and colonial overseers (Bragdon 2015; Gray and Fiering 2000; Salomon and Hyland 2010).

Eighteenth- and nineteenth-century Native authors have received new attention from literary scholars, who place their work in the larger social and economic context (Bross and Wyss 2008). These early writings were among the first sparks of the Native revitalization movements of the nineteenth and early twentieth centuries (Tiro 1996) (fig. 6). The well-known “Elegy

Image provided by the Beinecke Rare Book and Manuscript Library, Yale University.

Fig. 6. Cover of the hymnal *Indian Melodies* by Thomas Commuck, a Narragansett Indian, 1845.

to King Philip” (1836) by William Apes (Pequot, b. 1798, d. 1839) was a published sermon related to Mashpee Wampanoag resistance to the so-called enfranchisement movement that resulted in the loss of much of the communally held Indian land in southern New England (Plane and Button 1993).

Regional Overviews: New England and the Far Northeast

Although little material evidence for coastal village-settlements described and depicted in early historical records (Champlain 1613) has been excavated to date (Leveillie et al. 2006), it appears likely that in southern New England and the mid-Atlantic, some coastal societies had been evolving toward chiefly level organization for several centuries before the arrival of Europeans (Bragdon 1996b) (fig. 7). The natural abun-

dance of wetland-dominated landscapes in coastal areas of southern New England (Bernstein 1992; Chilton 1999, 2002) made sedentism less necessary and offered limited regional mobility as an explanation for the rise of sachems as precontact managers and diplomats (Chilton 2005; Herbster and Chilton 2002).

New place-making theory (Rubertone 2009) provides insights into the ways in which sites, settlements, and even burial grounds used only seasonally could have served as centers and possibly ceremonial hubs for social groups (McBride 1994b). Another concomitant of chiefly practice—feasting, or the periodic redistribution of foods and wealth objects by leaders to their followers (Hayden 2014)—might have left only scant traces. Yet ethnohistorical records leave no doubt that such rituals were significant (Simmons 1981, 1986). Archaeologists questioning both the environmental and external stimulus models of social complexity have suggested that control of symbolic capital might be more relevant

Map produced by Daniel G. Cole, National Museum of Natural History, using data provided by Ives Goddard in 2019.

in understanding the rise of social complexity in the region and elsewhere (Sassaman 2004).

Further to the Northeast, in the New England interior and in the Maritimes, archaeologists are challenged by the apparent mobility and fluidity of social groupings along the coast of Maine and their relations to Native peoples and communities occupying interior regions. Earlier formulations that linked nascent tribal groupings in the region to dominant river drainages (Snow 1980) are now supplemented by extensive research suggesting that ethnicity during the later historic period was more fluid than had earlier been understood (Baker 2004; Bourque 1989). A great deal of research on treaties and treaty negotiations between leaders and the colonial governments in northern New England and southern New Brunswick and Quebec has helped clarify some of these tribal groupings and relations (Baker 1989; Leavenworth 1999).

The historical sources present an unarguable case for widespread disruptions in Indigenous communities linked to introduced diseases, dislocation, and conflict within and among Native peoples on the Atlantic Coast from the fifteenth century onward as a result of the arrival and settlement of Europeans (Grandjean 2011a, 2011b; see also Conkey et al. 1978; Salwen 1978). However, this ultimately monolineal and materialist perspective, with its focus on technological change, still leaves much about the colonial era and its cultural dynamics unexplained (Thomas 1984). As a result, more recent work has focused on survival, continuity, mimesis, and creative transformations of Native objects, traditions, social and political structures, and ritual practices from the sixteenth to the eighteenth centuries (Doughton 1997; Lamb-Richmond 1994; Plane 1996, 2000).

Persistent Native Communities along the Atlantic Coast

Although most scholarly attention has been traditionally focused on the complex colonial and international politics of the Atlantic region, including the role of Native peoples in various colonial conflicts, the slave trade, and the deer skin trade (Brasser 1978; Conkey et al. 1978; Jacobs 1988; Jennings 1988; Jones 1988; Leach 1988; Washburn 1988a; see “Southeast,” this vol.) (fig. 8), less attention has been paid to the Native communities that persisted in place from the colonial era until the present. Although visited by anthropologist Frank Speck in the 1920s (Speck 1925) and later scholars in the 1940s (Mook 1943; Stern 1952), little is known about the social and political practices of Powhatan descendants and the descendants of tribes

not affiliated with the Powhatan, such as the Chickahominy and the Monacan.

It is obvious that these Native Virginians forged a separate way in the oppressive and sometimes violent era of the Civil War, Reconstruction, and the establishment of the racially motivated “massive resistance” movement of the early twentieth century (Mays 2008). Through archaeology, written sources, and oral history, Ashley Atkins Spivey, a member of the Pamunkey tribe of Virginia, has documented the continuities of Pamunkey subsistence practices, tribal political structure, and pottery-making tradition into the present (Atkins 2010; Atkins Spivey 2017). This work was assisted in part by the growth of the tourist industry in the region, support for Native arts programs, continuity in matrilineal oral history, and the handing down of pottery-making techniques from mother to daughter for many generations. The Pamunkey tribe of Virginia was finally granted federal recognition in 2015.

The Monacan tribe of Natural Bridge, Virginia, is working with anthropologist Jeffrey Hantman to uncover its deeper history, inspired by a report first published in Thomas Jefferson’s *Notes on Virginia* (1785) that parties of likely Siouan-speaking Native peoples visited some of the mound sites dotting the western Virginia Piedmont. Hantman and his Native colleagues have identified a pattern of such visits occurring in much of the Native Southeast for several centuries after European colonization, speaking to the processes of landscape commemoration and the maintenance of Native identity, even among displaced Native groups (Hantman 1990).

Anthropologists and historians continue to work with the Lumbee people of North Carolina, a complex community ancestrally connected to both Indigenous and African American populations (Blu 1996, 2001; Dial and Eliades 1996; Sider 1994, 2003). Among the Lumbee, scholars have discovered deep and widespread emotional and social ties to the region in which they live that define and explain their Native American heritage (Lowery 2010, 2018).

The ancestors of the historic Tuscarora, Nottoway, and Meherrin (Kauwets’a:ka) peoples of Virginia and North Carolina (Boyce 1978:282) congregated in territories that were not yet settled by colonists attracted to new opportunities in the Virginia and North Carolina colonies (Rountree 1990). The Nottoway (the Surry band and the Cheroenhaka (Nottoway) Indian tribe of Virginia) appear to have pursued a strategy of non-confrontation yet managed to maintain a matrilineally organized system of land tenure and inheritance until well into the nineteenth century (Woodard 2016). The Meherrin, likely another Iroquoian-speaking group, lived in similarly obscure isolation that served as an

Map produced by Daniel G. Cole, National Museum of Natural History, using data provided by Ives Goddard in 2019.

Fig. 8. Map of the early-contact Native American societies in the mid-Atlantic region.

effective survival tool in an increasingly biracially divided society (Dawdy 1995). Unlike the Pamunkey, the Lumbee, the Nottoway, and the Meherrin, as well as several other small tribes in Virginia, North Carolina, and Maryland, have thus far been unsuccessful in their pursuit of federal recognition, though they have long been recognized as tribes by their home states.

Iroquoia

Since the publication of the *Northeast* volume in the *Handbook* series (Trigger 1978a), research concerning the Iroquois has focused on several topics, including examination of their former cultural practices through ethnohistorical and archaeological records and recent political and social activism among Iroquoian speakers and descendant communities. There is also an extensive body of new scholarship on the origins,

homelands, and migrations of what became the Five/Six Nations, as well as on the history of the League of the Iroquois and its interactions with Europeans and the governments of the United States and Canada (see “Additional Readings,” this chapter).

In spite of the extensive past research on Iroquois cultural practices—from the early work by Lewis Henry Morgan (b. 1818, d. 1881) and J.N.B. Hewitt (b. 1859, d. 1937) to the career-long investigations by mid-twentieth-century scholars such as William Fenton, Elisabeth Tooker, Bruce Trigger, and others—there is still much to learn about Iroquois ethnohistory and ethnography. This is evidenced by the ongoing research on gender ideology, personhood, and ancient and early modern witchcraft (Harring 1992; Wonderley 2012). The ancient northeastern complex of “warfare, captivity, torture and cannibalism” (Fenton 1978:315–316) is far better known today, owing to both documentary and archaeological research (Abler 1980, 1988;

Richter 1983). The Iroquoian kinship system and post-marital residence patterns continue to challenge modern scholars (Kronenfeld 2001) and are also relevant to recent archaeological studies of the protohistoric period (Birch 2008; Dannin 1982; Hart 2001).

Several later studies have looked at the role of alcohol among the Iroquois and other northeastern peoples and its likely role in traditional ritual (Conrad 1999). The role of sorcery in the colonial-era Iroquoian communities where Catholic missionaries had made inroads has been explored (Blanchard 1982a, 1982b), as has traditional Iroquois warfare of the early contact period (Carpenter 2001). Scholarly debates concerning place making and personhood have also been applied to Iroquoian archaeology (Creese 2012, 2013b), while the excavation of longhouses, the classic Iroquois house form (Fenton 1978:303), still has much to teach us about Iroquoian place making and spatial orientations (Kapches 1990, 1993).

Ideas of personhood and gender have been investigated using both archaeological and ethnohistorical sources, and this research has been applied to topics ranging from mat making (Leeson 2009) to task allocation (Sydoriak 2010) and women's roles, a long-standing topic in Iroquoian studies. A search for greater cultural meaning in archaeological materials has led archaeologists to consider the symbolic and metaphorical aspects of material remains of both Native and European origin, particularly in mortuary ritual. Topics have included color symbolism and the incorporation of glass beads and other objects into Iroquoian practice (Hamell 1987), as well as the presence of trade goods on sites that are demonstrably outside the range of early European settlement in the 1500s and 1600s (Howey 2011, 2012).

The Iroquois played important roles as warriors on the colonial frontier and in the American Civil War, when men from Six Nations communities served in the Army, principally on the Union side. These soldiers performed numerous tasks for the Union and Confederate armies, including dangerous scouting missions (Larry Hauptman, personal communication, 2014).

Of continuing interest is the study of the long-standing relationship between the Iroquois and anthropological scholarship, beginning with Lewis Henry Morgan's seminal research on the Iroquois in the mid-nineteenth century (Bieder 1980; Campisi 1982; Cooper 1998; Hauptman 2012; Tooker 1978).

Iroquoian communities have also been at the forefront of Native activism in the Northeast, as noted in several chapters in the *Northeast* volume (Trigger 1978a). Federal recognition, environmental activism, and issues of sovereignty have united many Six Nations descendants for decades (Hauptman and Campisi

1988; Landsman 1988, Landsman and Ciborski 1992; Simpson 2014). They have successfully repatriated a number of wampum belts, which were used in traditional diplomatic exchanges and as part of longhouse ceremonies (Fenton 1989; Tooker 1998; Sullivan 1992). Native scholars are collaborating with linguists and education specialists on language revitalization programs, continuing the innovative work on Mohawk reported on in the 1978 volume.

Great Lakes and Riverine Region

Contemporary Issues in the Great Lakes

Since the publication of the *Northeast* volume (Trigger 1978a), Native activism and the evolution of federal policy in Canada and the United States have transformed the political, legal, and cultural landscape for Indigenous communities in the area. The tribes have successfully litigated their treaty rights, especially in Michigan (Cleland 1992, 2014; Doherty 1990; Fletcher 2012), Wisconsin (Nesper 2002, 2012; Satz 1991; Whaley and Bressette 1993), and Minnesota (Cleland 2014; McLurken 2000), giving tribal members access to resources throughout the lands they ceded in the nineteenth century (figs. 9, 10).

The Great Lakes Indian Fish and Wildlife Commission (GLIFWC), an Ojibwe intertribal natural resource management agency, established in 1984, integrates traditional ecological and Western scientific knowledge (Kimmerer 2013). Importantly, the GLIFWC tribes signed the Anishinaabe Akii Protocol in 1998, an accord with the Ojibwe communities in

Fig. 10. The Lac Courte Oreilles Band of Lake Superior Chippewa established a Harvest Education Camp on lands for which the Chippewa have hunting, fishing, and gathering rights that were threatened by iron mining. Thousands visited the camp between April 2013 and June 2015.

Ontario that allows generally for technical knowledge to move north and traditional ecological knowledge to moves south, in a rearticulation of Native nationhood that recalls the dynamics of the regional Indigenous polity in the early historic era (Witgen 2012).

Another change in U.S. federal Indian policy was the development of new criteria for federal recognition of tribes. This shift led to the recognition of two Indigenous communities in the state of Michigan, the Match-e-be-nash-she-wish Band and the Pokagon Band of Potawatomi Indians (Low 2016).

For many tribes in the region, the passage of the Indian Gaming Regulatory Act in 1988 (Cattellino 2008b) has led to an economic and cultural renaissance. All 11 recognized tribes in Wisconsin have gaming compacts with the state. Collectively, the tribes own more than 20 separate sites including casino/hotel/conference center complexes. The tribes employ thousands of people, most of whom are not Native, and transfer tens of millions of dollars to the states in exchange for a shared monopoly on casino gaming. The 12 federally recognized tribes in the state of Michigan operate 17 casinos. Eight tribes in Minnesota employ more than 20,000 people in their 17 gaming facilities.

With this unprecedented flow of revenue from gaming, many tribal governments have expanded and

can now address poverty and supply public services. The income from per capita dividends—which varies widely from several hundred dollars a year to tens of thousands of dollars—is associated with declines in poverty, unemployment, obesity rates, truancy, smoking, and alcohol consumption rates (Akee et al. 2015:196–198). The effects of this change for the tribes in both the United States and Canada have been documented on tribal websites, in tribal newspapers, and sporadically in academic and legal publication, like those on the Meskwaki of Iowa (Foley 1995) and the Oneida in Wisconsin (Hoeft 2014). In addition, several tribes that have benefited from gaming have created tribal museums (Lonetree 2012; Sleeper-Smith 2009b).

Language and Literacy Studies

Indigenous language revitalization programs often associated with tribal schools have also proliferated, including for Potawatomi (Macaulay 2014; Wetzel 2015), Menominee (Macaulay 2009, 2012), Oneida (Abbot et al. 1996), and Ojibwe (Nichols and Nyholm 1995, for the Mille Lacs band in Minnesota). Valentine's (2001) grammar of Odawa and Eastern Ojibwe is regarded as the most comprehensive study

of Ojibwe language undertaken and is being used in second-language acquisition programs throughout the region, especially in Canada. Costa (2003) has reconstructed the Miami-Illinois language spoken south of Lake Michigan, working with tribal member Daryl Baldwin, director of the Myaamia Center, in a cooperative effort with Miami University of Ohio to revitalize the language.

Tribal Institutional Developments

Most of the tribes in the region have established tribal historic preservation offices that deal with NAGPRA and related issues (see “Cultural Heritage Laws and Their Impact,” this vol.). The Potawatomi, the most affluent of the tribes in Wisconsin, have created a common reburial site used by tribes throughout the region.

State committees and commissions on Indian affairs have emerged throughout the Great Lakes region, in Indiana, Michigan, Minnesota, New York, and Wisconsin. In Wisconsin, a State of the Tribes address has been given by 1 of the 11 tribal chairs to a joint session of the legislature each spring since 2005; it provides an accounting of the ways in which tribes and states have come to be involved with each other.

Tribal governments also sponsor community websites that serve as clearinghouses for official information, tribal calendars, job announcements, tribal newsletters, and contact information for social,

legal, and medical services (Cuillier and Ross 2007) (figs. 11, 12). The Lac Courte Oreilles Ojibwe community of Wisconsin hosts both a National Public Radio station and *News from Indian Country*, a national Indian newspaper.

Another aspect of tribal institutional development is the emergence of tribal community colleges in the region (Warner and Gipp 2009), such as the Bay Mills Community College (1981), Lac Courte Oreilles Community College (1982), Fond du Lac Tribal and Community College (1987), Leech Lake Tribal College (1990), the College of the Menominee Nation (1993), White Earth Tribal and Community College (1997), Saginaw Chippewa Tribal College (1998), Keweenaw Bay Ojibwe Community College (2009), and others. Each seeks to reproduce, to a different degree, aspects of local Indigenous culture and society.

Urban Indians

The *Northeast* volume (Trigger 1978a) did not address urban Indian communities in either the United States or Canada (see Weibel-Orlando 2008). Since that time, the field has grown through several major publications on urban Indians—both general overviews (Jackson 2001; Straus and Arndt 1998) and studies of particular urban Indian communities, like Chicago, the “Great Indian Metropolis” (LaGrand 2002; LaPier and Beck 2015; Laukaitis 2015; Low 2016). This new scholarship has revealed how urban areas in the Great Lakes region were effectively annexed by reservation communities and contributed to their vitality in the second half of the twentieth century and beyond.

Photograph by Tina Bushong.

Fig. 11. The Forest County Potawatomi established their court in 1994. It hears cases regarding small claims, child protection, child support, guardianship, wage garnishments, and employment, reflecting the tribal institutional development brought about by gaming. Note the local symbols of Indigenous sovereignty on the back wall of the courtroom: a painting depicting eagles in a natural setting, a wooden icon of Potawatomi as “keepers of the fire,” and an eagle staff.

Photograph by Shiela Reaves.

Fig. 12. The Ho-Chunk Judiciary was established in 1995 and is organized as a trial court, supreme court, and traditional court—the latter dealing with matters of traditional law—led by 12 elders representing the Ho-Chunk clans.

The publication of ethnohistorical accounts of tribal groups and tribal-settler interactions stimulated by the Indian Claims Commission (1946–1978; see Royster 2008) continues to revise scholars' understanding of the degree to which Indian peoples have endured as well as shaped the interaction between themselves and settlers. The studies of the Potawatomi, covering three centuries (Clifton 1998), and of the Chippewa (Hickerson 1988; Bohaker 2006, 2020) were exemplary. More recent tribal histories by both Indigenous and non-Indigenous scholars have proliferated, reflecting the complexities of the colonial encounter and often reversing the presumptive power relations between the metropole and hinterland.

White's (1991) *The Middle Ground: Indians, Empires and Republics in the Great Lakes Region, 1650–1815* marked a watershed in this genre and was later followed by equally compelling and aspiring summaries (Bellfy 2011; McDonnell 2015; Witgen 2012). Many of the later ethnohistorical reappraisals focused on the Ojibwe, Chippewa, or Anishinaabe peoples—the largest group of Indigenous people in the Great Lakes region (Chute 1998; Doerfler 2015; Kugel 1998; Meyer 1994; Miller 2010)—greatly expanding knowledge of how Indigenous communities endured during the nineteenth and twentieth centuries through colonization, settlement, land dispossession, and struggle with belonging and citizenship in the course of their history.

Another local group, the Ho-Chunk Nation (formerly the Wisconsin Winnebago tribe; Lurie 1978), received extensive treatment in works about the first contact between Indigenous Great Lakes people and the French (Lurie and Jung 2009) and about the relationships among the Ho-Chunk, early photographers H.H. Bennett and Charles Van Schaick, tourists, and settlers in the evolving political economy of central Wisconsin in the late nineteenth and early twentieth centuries (Hoelscher 2008; Jones et al. 2011). These latter works can be compared with a similar study of photography of and by Ojibwe people in Minnesota (White 2008). The new thinking on the Ho-Chunk was expanded thanks to the study of the political and cultural significance of Ho-Chunk powwows and the ways in which the community has endured and imagined itself over the course of the past century as it sought to engage and manage economic, political, cultural, and social forces emanating from the dominant society (Arndt 2016).

The Menominee Indians of Wisconsin have been given less attention by ethnographers and historians since restoration to tribal status in 1973 (Beck 2002,

2005). The exceptions are several studies of their forest industry and of their ability to reproduce many traditional aspects of their society and culture while engaging with the market economy and becoming a lumbering people (Davis 2000; Hosmer 1999).

The Stockbridge Munsee Mohican, adjacent to the Menominee, are also experiencing a renaissance, as noted (Oberly 2005). The nearby Brothertown Indians, not yet federally recognized, are the subject of Cipolla's (2013) synthesis of historical archaeology and ethnohistory, and Birmingham's (2015) monograph on the multiethnic off-reservation community of Skunk Hill also calls attention to the capacity of Indigenous peoples to creatively manage an Indigenous modernity beyond the reach of the federal government (Birmingham 2015; Cipolla 2013).

Since Campisi's essay on the Oneida in the *North-east* volume (Campisi 1978), the tribe, with more than 17,000 members, has become the largest in the state of Wisconsin. It has reacquired more than 23,000 acres within the borders of its reservation, and it employs more than 3,000 people. Like a number of other tribes in the region, it has a cross-deputized police force, a court system, a school system, health clinics, social service programs, and tribal businesses. As a symbol of its engagement with the regional society, culture, and economy, the east gate of the Green Bay Packers' Lambeau Field is now called the "Oneida Nation Gate," sponsored by the tribe since 2003. The Oneida tribe has sponsored an annual food sovereignty conference since 2013. Historians have continued to interpret the Oneida past (Campisi and Hauptman 1988; Hauptman and McLester 1999; Hoeft 2014; H.S. Lewis 2005).

Drawing effectively on postcolonial theory, Buss's (2011) monograph examined the ways in which Indians were removed from the northern Indiana landscape and from the consciousness of settlers in the first half of the nineteenth century, through both physical removal and erasure from public narratives. Historian Sleeper-Smith (2001) described the same region under the French regime to reveal the important role played by Indigenous women, kinship, and mixed-bloods in the fur trade (see also Murphy 2000, 2014; Peterson and Brown 1984). Another collection further extended this line of research to show how Indian people had played a far more important role in the fur trade than previously thought (Sleeper-Smith 2009a).

Gregory Dowd was also a leader in this phase of new ethnohistorical scholarship (Dowd 1992), which detailed the nature of intertribal relations and the importance of religion and prophecy in the refiguring of Indigenous polities in the region (Dowd 2004; Witgen 2012). In his 2004 book, he homes in on the Pontiac rebellion and extends the approach taken in the earlier

work, revising our understanding of the significance of religious motives in shaping Indigenous military action. This work is complemented by the recent re-examination of the entire Old Northwest as a multicultural world being reshaped by the aspirations of the settler republic and continental empire (Saler 2015). Other studies of the complicated relations among the Midwestern tribes at the time of the Black Hawk War are also relevant (J. Hall 2009; S. Warren 2014), as are two seminal historical works on the Chippewa of Lake Superior and on early reservation life in the Great Lakes region (Danziger 1990, 2009).

Two historical books were produced in collaboration with members of the Bay Mills Ojibwe community in Michigan and the Red Cliff Ojibwe community in northern Wisconsin (Cleland 2000; Paap 2013), complimented by a study of the treaties that remain important at several Ojibwe communities in Wisconsin and Minnesota (Norrgard 2014). The account of the conflict over the exercise of off-reservation fishing rights that took place in the 1980s revealed how the contemporary Lac du Flambeau community in Wisconsin (Lac du Flambeau Band of Lake Superior Chippewa) redefined itself in the context of political action (Nesper 2002). The same community is also featured in a collection of oral histories drawn from the memories of local elders in the 1990s (Tornes 2004).

The Odawa (Ottawa) communities in Michigan have also experienced a revitalization (Pflug 1998). Complementing, updating, and shifting the focus on Michigan Odawa and Ojibwe communities is Fletcher's (2012) legal history of the Grand Traverse Band of Ottawa and Chippewa Indians. Fletcher has also developed *Turtle Talk* (<https://turtletalk.wordpress.com/>), a blog hosted by the Indigenous Law and Policy Center at the

Michigan State University College of Law, which collates legal materials about tribal matters from around the country. This blog, in conjunction with the Newberry Library's website *Indians of the Midwest* (<http://publications.newberry.org/indiansofthemidwest>)—a multiyear project directed by ethnohistorians Brian Hosmer and Loretta Fowler—gives users a contemporary portrait of vibrant Indigenous communities in the Great Lakes region. The latter project follows the Newberry Library's earlier support of the *Atlas of Great Lakes Indian History* (Tanner 1987), a useful tool for anyone interested in the region. Readers particularly interested in the Indigenous nations of Wisconsin can also find other excellent recent overviews (Loew 2013, 2014).

Finally, several publications followed the ethnographic work conducted in Iowa among the Meskwaki (Fox) and Sauk (Sac) people during the twentieth century by anthropologists Sol Tax (Daubenmier 2008) and Fred McTaggart (1984; see Edmunds and Peyser 1993; Foley 1995; Goddard 1992, 2006).

Religiosity and Spirituality

Several recent publications have addressed how Native American communities have assimilated Christianity over the course of the past century and a half (Devens 1992; Leavelle 2012; McNally 2000, 2009) (fig. 13).

Tribal religions, once thought to be moribund, have been “recollected” (Low 2016) (fig. 14) in several tribal histories done by a cohort of indigenous Great Lakes scholars that has arisen since the 1980s. Lac Courte Oreilles Ojibwe Benton-Banai produced *The Mishomis Book*, ostensibly a children's book, which can be found

Photograph by Larry Nesper.

Fig. 13. Kinship transcends religious differences as the proximate Christian graves and traditional spirit house reveal at the Bad River Band of Lake Superior Chippewa reservation cemetery.

Fig. 14. License plates are ordinary symbols of sovereignty. *Midewin* refers to the Ojibwe Medicine Lodge, indicating that the owner is an initiated member of this religious society.

in many Ojibwe homes in northern Wisconsin. It played an important role in revitalizing traditional religious practices in the western Great Lakes region (Benton-Banai 1988). *The History of the Ojibway People* (W. Warren 1885/2009) by the nineteenth-century Ojibwe mixed-blood William Warren (b. 1825, d. 1853) was republished with extensive commentary by Schenck, who has also produced full-length extensively annotated volumes on Warren (Schenck 2007) and Edmund Ely (Schenck 2012), a mid-nineteenth-century missionary to the Ojibwe. A sympathetic new historiographical

study of the Ojibwe Midewiwin religion (Angel 2002) is a notable addition, as is *An Archaeology of the Soul: Native American Belief and Ritual* (Hall 1997), which includes several essays on Great Lakes tribes. Ethnomusicologist Thomas Vennum has written a valuable study of the Drum Dance, a late nineteenth-century religious revitalization movement (Vennum 1982), as well a detailed survey of wild rice cultivation (Vennum 1988), the promised “food that grows on the water,” which reportedly motivated the Ojibwe migration from the east (Benton-Banai 1988).

Indigenous Intellectual Production

Basil Johnston (b. 1929, d. 2015), a Canadian Ojibwe of the Cape Croker First Nation and a member of the Ethnology Department at the Royal Ontario Museum, wrote extensively on Ojibwe language, culture, and history (Johnston 1976, 1987, 1988, 1995), offering an Indigenous perspective. The Minnesota Ojibwe community has also produced other authors, like brothers Anton Treuer (A. Treuer 2011, 2012) and David Treuer (D. Treuer 2012), Leech Lake Ojibwes who are both prominent Indigenous intellectuals with impressive publication records. They explore contemporary issues in their communities with implications for Indian people across the region, if not the continent (fig. 15). Other Native writers, like legal and political philosopher John Borrows (2002, 2016), a member of

Fig. 15. Commemorating the one hundredth anniversary of the fourth meeting of the Society of American Indians, which took place on the campus of the University of Wisconsin-Madison in 1914, the Nelson Institute sponsored a Native Nations summit in 2015 that brought tribal leaders from all 12 indigenous communities in Wisconsin to campus for the first time in a century.

the Nawash First Nation in Ontario, offer sophisticated new models of the possibilities for relations between Indigenous polities and large nation-states.

Conclusion

As a region of great cultural diversity, the Northeast includes Native societies of remarkable complexity and artistic accomplishment, from the Mississippian and Ohioan people of 100–1400 A.D. to independent and mobile societies adapted to both the coast and the interior, to historical groups with ingenious and sustainable subsistence practices that have modern significance. Northeastern peoples have survived centuries of disruption, dislocation, and population loss, the details of which are now much better known than in the 1970s, when the *Northeast* volume of the *Handbook* was published.

New approaches introduced since its publication in 1978 include innovative and technology-assisted archaeology, new involvement of Native peoples in scholarship and representation, initiatives that encourage and fund Native-run research, new emphasis on Native resistance and creative responses to colonization, postcolonial and Indigenous scholarship, and repatriation. Ongoing and future research might also include a focus on inter- and intracontinental Native networks, erasing the lines between “precontact” and “historic” Native archaeology and “decolonizing” scholarship and the public-academic sphere. Studies published since 1980 have greatly complicated scholars’ understanding of the Northeast societies, adding to theoretical debates about materiality, gender, landscape, and memory (Crosby 1993).

New research on Native networks will likely further explore interregional and wider networks among members of ancient and recent Native societies—specifically, the links that connected Native peoples of the Northeast with other regions and contributed to technical innovation, resource exchange, genetic heritage, and the spread of ideas. Earlier studies in ethnohistory have tended to underemphasize continued tribal interactions of this kind, although substantial evidence now points to wider links. Rethinking the idea of “contact” itself includes focusing on Native initiatives in exploration, trade expansion, and intertribal alliance.

Just as older concepts of the isolation of individual tribal communities in the past have given way to new understandings of connectivity, older historical timelines are being reconsidered. Recent interest in what might be called the “deep history” of Native American societies emphasizes continuities between “precontact” communities and those of the colonial and

postcolonial period. Under this new approach, the Mississippian and Ohioan societies, once treated almost exclusively as belonging to the precontact past, are now understood to have fifteenth-century and later manifestations in the Northeast, much as the ancient Indigenous ideas of personhood, cosmologies, and ontologies have extended into recent or current Native societies.

Perhaps the most powerful change relates to the “decolonization” of Native history and anthropology. In response to legitimate concerns about the rigidity of past anthropological constructs and of postulated trajectories of precontact “otherness” and postcontact acculturation and disappearance, a number of changes are visible in today’s scholarship about the Northeast. These include a better integration of Native community interests in all scholarly studies, inclusion of Native professional and community scholars in the teaching of Indigenous history and ethnography, and greater awareness of the public impact of scholarly production on Indigenous communities. These new directions and further expansion of topics of mutual interest to scholars, both Native and non-Native, help increase the ethnographic and archaeological potential of contemporary research in the Northeast region.

Additional Readings

Owing to space limitations, this chapter omits many important articles and books written about the Native peoples of the Northeast since 1978. Notable among fine book-length ethnographies and collections are Grumet (1996) and Oland et al. (2012), especially on collaborative research and decolonization, as well as Sider (2003). Pauketat (2004) is the best summary of recent archaeological records on Mississippian societies.

Several sources are available on regional topics not covered in this chapter. On the complicated history of the mid-Atlantic coastal region, new writings on the Delaware, besides Goddard’s *Handbook* chapter (Goddard 1978b), include Barr (2006), Grimes (2013), Grumet (1980), Lappas (2010), and Schutt (2007). Sources on the Susquehannock or “Conestoga” people, besides the original chapter by Jennings (1978), include Lauria (2012) and Sempowski (1994); for the so-called Marginal Groups (see Berry 1978) on the Pennsylvania frontier, see Richter (1990).

The archaeology of Maryland and Virginia and historical developments among its Native people are well known in outline (Custer 1986, 1996; Fausz 1988; Wall and Lapham 2003) and have been substantially expanded to cover the contact era (Gallivan

2016; King 2012; King et al. 2014; Rountree 1989, 1990; Rountree and Turner 2002; Veit and Bello 2001; Williamson 2008). Specifically on the Jamestown and the Roanoke colonies, see new data in Emery (2015), Helm (2015), and Kupperman (2007). More sinister aspects of the colonial project in the mid-Atlantic region were the Native involvement in the slave trade (Haefeli 2002; Haefeli and Sweeney 1995; Rushforth 2003; Starna and Watkins 1991; Ward 2001) and the insatiable appetite among Native leaders for guns and other European goods (Custer 1994).

For the Iroquoia region, the origins, homelands, and early migrations of the ancestors of the future Confederacy remain popular topics (Abel 2002; Martin 2008; Warrick 2000; Wonderley 2005). The Iroquoian pre- and protohistory has been explored by Hart and Brumbach (2003) and Hart and Engelbrecht (2012). On the early boundaries between Algonquian and Iroquoian speakers, see Chafe and Foster (1981), Guindon (2009), and Mithun (1985). For possible causes of migration, including possible population decline during the Early Woodland period, see Birch (2012), Engelbrecht (1987), and Fiedel (2001). Prime sources on the early populations of certain Iroquois nations include Jones (2010a, 2010b, 2010c), Martin (2008), and Stewart and Cowie (2007). Other scholars used documentary sources to pinpoint the origins of the League (Kuhn and Sempowski 2001; Starna 2008). The role of the League of the Iroquois in the colonial setting has been explored in scores of post-1980 studies (Aquila 1984; Brandao and Starna 1996; Campisi and Starna 1995; Foster et al. 1984; Gehring and Starna 2012; Lehman 1990; Pomedli 1995; Rich-

ter 1992b; Robie 1982). On the specific role of the league in colonial conflicts in North America, see Hallock (2003), Parmenter (1997, 2003, 2007), and Richter (1998). On the Iroquois history in the nineteenth century, see Taylor (2002). The model some scholars believe had been provided by the league in the conception and writing of the U.S. Constitution testifies to the enduring importance of the Iroquois confederacy to American history in general (Grinde 1995; Jacobs 1991; Levy 1996; Tooker 1988).

Readers particularly interested in recent works authored by Indigenous scholars in the Great Lakes region are encouraged to see *Centering Anishinaabeg Studies: Understanding the World through Stories* (Doerfler et al. 2013), *Ojibwe Narratives of Charles and Charlotte Kawbawgam and Jacques LePique, 1893–1895* (Kawbawgam and LePique 1994), the extensive writings of Anton Treuer (e.g., 2011, 2012, 2020) and David Treuer (e.g., 2012, 2019), as well as the legal scholarship of John Borrows (e.g., 2016, 2019).

Acknowledgments

KB would like to thank Marley Brown III and several colleagues who contributed to this review, particularly Martin Gallivan, Laurence Hauptman, Audrey Horning, and Ramona Peters, as well as Jessica Bittner, a PhD candidate at the College of William and Mary, for her help with the bibliography. Both authors are grateful to two chapter reviewers and the volume editors, Sergei Kan and Igor Krupnik, for their many helpful comments on earlier versions of the chapter.

Section Introduction

IGOR KRUPNIK

The organizers of the *Handbook of North American Indians (HNAI)* had intended to cover its history and early development as part of its introductory volume 1 (Sturtevant 1971f :6–7; see “Introduction: A Gateway to the *Handbook* Series,” this vol.). A May 1972 draft outline for that volume included an “Editor’s Introduction” of 2,500 words to be written by the series’ general editor, William C. Sturtevant, which would address, besides the description of the “previous Handbooks,” the “history, organization, and purposes of this one” (Sturtevant 1972b, 1972c). The editor meant for the account of the *Handbook* origin to be brief, of no more than a few pages.

There is no record that such an introduction was ever written; instead, beginning in 1978, all of the published volumes in the *Handbook* series contained a standard one-paragraph statement in their preface:

Preliminary discussions on the feasibility of the *Handbook* and alternatives for producing it began in 1965 in what

was then the Smithsonian’s Office of Anthropology. In the early years, the content and production of all volumes of the *Handbook* were planned as indicated in the detailed history of the whole *Handbook* given in Volume 1 (Sturtevant and Heizer 1978:xiii).

The same statement appeared even in volume 2, published in 2008, a year after Sturtevant’s passing (Bailey 2008a:xi). By that time, it was obvious that there were no plans to write this “detailed history” of the *Handbook*; it was even unclear whether the series’ introductory volume 1 would ever be produced. Nonetheless, when planning for volume 1 began anew in 2013–2014, its editors agreed on the need to chronicle the origin and the full history of the *Handbook* project, albeit almost 50 years after it was started. The five chapters below that cover the history of the *HNAI* project finally fulfill the pledge given by the general editor and the *Handbook* team that is reiterated in each volume of the series.

The Beginnings, 1965–1971

ADRIANNA LINK AND IGOR KRUPNIK

The early years of the *Handbook of North American Indians* (HNAI) initiative can be appropriately told as an effort to plan and publish a new multivolume encyclopedic series pertaining to North American Indian societies and histories. At the same time, the *Handbook* endeavor offered a venue to the Smithsonian and those involved with the series production to address many intellectual and sociopolitical issues of the period. The planning for the *Handbook* coincided with the radical cultural and societal transformations of the 1960s and 1970s, a moment in history that affected the future of American anthropology, the Smithsonian, and American society, in general. These transformations included—but were not limited to—the conflicts facing anthropology as a discipline, especially with regard to its views on the status of Native Americans/First Nations, the colonial legacy of North American history and its treatment of Indigenous groups and cultures, and the pursuit of social justice and political rights on a global scale. Planning for the *Handbook* series thus could not have come at a more challenging time. It involved many well-known players, including Smithsonian curators and administrators, Native American/First Nations intellectual and political leaders, and renowned anthropologists and historians of the era.

The following overview of the early history of the *Handbook*, written more than 50 years after the genesis of the series, offers a more nuanced account than the one originally planned for the introductory volume in 1972 (see “Introduction: A Gateway to the *Handbook* Series,” this vol.). It examines the development of the HNAI project through three intersecting contextual frameworks: institutional, disciplinary, and individual. The *Handbook* saga actually takes its roots with the ascendance of S. Dillon Ripley to the position of Secretary of the Smithsonian Institution in 1964 because of his critical role in inspiring and supporting the series, as well as securing funds for its production (see “Appendix 1,” this vol.). That “beginnings” phase concluded in 1971, by which time the series had a detailed outline, an editorial board, and firm plans for each of its individual volume. It would nonetheless take another seven years for the first *Handbook* volumes to be printed in 1978.

Ripley and Tax Come to the Smithsonian, 1964–1965

In 1964, the Smithsonian Board of Regents elected Sidney Dillon Ripley (b. 1913, d. 2001) as the Smithsonian’s eighth Secretary (fig. 1). At 51 years old, Ripley came to the Smithsonian following a prominent career at Yale University, where he served as a professor in the Department of Biology and as the director of the Peabody Museum of Natural History (Challinor 2003; Stone 2017). Despite being trained as an ornithologist at a time when biology had begun to move away from museum-oriented taxonomic studies in favor of research done in the laboratory or in the field, Ripley remained a strong advocate of the importance of museums as sites for developing new scientific theories (Appel 2000; Ripley 1965a). He considered natural history museums particularly essential for promoting innovations in environmental conservation and argued that the Smithsonian, as one of the premier museum complexes in the world, had a unique responsibility to prioritize the role of ecology within its research, exhibits, and public programs.

Yet upon his arrival in 1964, Ripley found the Smithsonian Institution to be largely dormant, a “sleeping beauty” that needed to be reawakened in order to achieve its fullest potential (Ripley 1984). One way he aimed to reenergize the institution was through the creation of several new cross-disciplinary offices—namely the Smithsonian Office of Anthropology (1965), the Office of Ecology (1965), the Office of Systematics (1965), and the Office of Oceanography and Limnology (1966)—that would facilitate more collaborative research. In his view, interdisciplinary collaboration was crucial for integrating perspectives from the social sciences into environmental conservation efforts (Ripley 1966b). This thinking underscored his decision to create a unified Office of Anthropology in February 1965 (Annual Report 1965:13, 39–40; Anonymous 1983:87, 94; Smithsonian Office of Anthropology 1968:6), which effectively merged the previously independent Bureau of American Ethnology (BAE) with the Department of Anthropology of the United States National Museum (renamed the National

Smithsonian Archives (2001-985).

Fig. 1. S. Dillon Ripley (b. 1913, d. 2001), eighth Secretary of the Smithsonian Institution.

Museum of Natural History in 1967). Through this action, Ripley aimed to broaden the Smithsonian anthropological endeavors and to promote cooperation with researchers working across different departments (Ripley 1964; Smithsonian Institution 1967a:39).

In another effort to rejuvenate the Smithsonian Institution, in September 1965 Ripley organized a three-day celebration honoring the two hundredth birthday of its founder, James Smithson (b. 1765, d. 1829). Attended by hundreds of scholars, government officials, and members of the public, the celebration featured several public events (fig. 2), such as the formal academic procession that introduced the sun in splendor as the institution's new official seal and showcased the institution's long history of contributing to science and culture (Dillon 2015). It also included a lecture series on the merits and potential of engaging museums in research, given by leading figures in the scholarly fields represented at the Smithsonian (Oehser 1966). Among the speakers was the renowned French anthropologist Claude Lévi-Strauss (b. 1908, d. 2009). He lauded the BAE's past contribution to documenting the languages and customs of Native Americans. Comparing the need for increased anthropological fieldwork to the discovery of an unknown planet, Lévi-Strauss

Smithsonian Archives (82-3265000004).

Fig. 2. To commemorate the two hundredth anniversary of the birth of James Smithson, founding donor of the Smithsonian Institution, a three-day celebration was held in 1965 on September 16, 17, and 18. The event included an academic procession. A portion of the Smithsonian Institution Building is visible in the background. (SIA, Record Unit 95, Box 59, Folder 5)

urged his audience to again take up the task of preserving records of the world's diverse cultures in order to confront the perceived loss of knowledge caused by the rapid technological, economic, and political transformations of the postwar period, before it was too late (Lévi-Strauss 1966:127).

Inspired by this speech and its convergence with his ideas about the utility of anthropological knowledge for worldwide conservation efforts, Ripley approached the American Anthropological Association (AAA) in November 1965 to offer the Smithsonian as an institutional base for international anthropological fieldwork. Eager to support what he called an "urgent horizons in anthropology program for a fuller record of man," he argued that the institution possessed the right balance of resources, departmental flexibility, and political neutrality needed to undertake such a project (American Anthropological Association 1966:760). This action effectively marked the beginning of the Smithsonian's "urgent anthropology" program, which, in keeping with Lévi-Strauss's call-to-arms, committed itself to documenting the languages, behaviors, and physical characteristics of the world's "changing cultures" (AAA 1966; Link 2016; Ripley 1966a).

Since Ripley was not an anthropologist, he sought an expert who could help him develop urgent anthropology at the Smithsonian and would soothe the internal tensions created by the merger of the Department of Anthropology and the former BAE. For this task, he approached University of Chicago anthropologist Sol Tax (b. 1907, d. 1995) (fig. 3) to serve as his special advisor on anthropology. By that time, Tax had emerged as one of anthropology's leading voices and organizers, thanks to his involvement with the Wenner-Gren Foundation for Anthropological Research and his position as founding editor of its internationally distributed journal, *Current Anthropology* (Stapp 2012; Stocking 2000; Wax 2008).

Beyond his organizational activities, Tax was perhaps best-known for his method and philosophy of "action anthropology" (Ablon 1979; Lurie 1961b; Tax 1952, 1964, 1975). It was a product of several decades of fieldwork and collaboration with the Meskwaki community (formerly called Sac and Fox Indians) living in Tama, Iowa, including the 1948 so-called Fox Project, which began as a fieldwork exercise for a group of graduate students from the University of Chicago. Tax's vision of action anthropology relied on open communication and collaboration between anthropologists and the group under study to employ in-depth knowledge about the community in order to help it address its social, political, and economic needs (Daubenmier 2008; Tax 1975). This emphasis on open communication became a central governing principle

National Anthropological Archives, Smithsonian Institution.

Fig. 3. Sol Tax, special advisor to Secretary Ripley and the head of the Smithsonian Office of Anthropology and, later, of the Smithsonian Center for the Study of Man (CSM, Box 141).

for nearly all of Tax's activities, both in his political activism alongside Native Americans and in his organization of a broader community of scholars.

Tax, like Ripley, also championed the integration of biological and anthropological perspectives, as evidenced by his organization of the 1959 Darwin Centennial Celebration at the University of Chicago (Smocovitis 1999; Tax 1960). Thus in Ripley's estimation, Tax possessed the right combination of leadership, organizational, and intellectual prowess to rejuvenate Smithsonian anthropology through programs that could "affect the whole discipline, both nationally and internationally" (Ripley 1965b). Likewise, Tax's access to a world constituency of social scientists through the list of subscribers to *Current Anthropology* made him an ideal person to spearhead global change within the field.

While Tax ultimately declined Ripley's invitation to head the newly consolidated Smithsonian Office of Anthropology (SOA), he did agree to serve as his special advisor on anthropology and set to work revamping its programs beginning in January 1966. To this end, Tax submitted a proposal to Ripley requesting Smithsonian funds to establish four major programs to advance the human sciences. These were (1) a study

of rapidly changing cultures across the globe (what became known as Smithsonian urgent anthropology), (2) a program on North American Indians, (3) a paleo-anthropology program focused on excavating the remains of fossil hominids, and (4) an archaeological survey of South America (Tax 1966). This list represented a mixture of research projects already underway at the Smithsonian and some more broadly conceived programs intended to serve the needs of anthropology as a whole. Although Tax supported the development of all four programs, his proposal to actively engage in the studies of the world's "changing cultures" most closely reflected his investment in cultivating a global community of anthropologists (Stocking 2000). It also represented a natural extension of his method of action anthropology, as the new program would necessarily rely on creating partnerships between anthropologists and societies seen as undergoing change (Link 2016). Thus, Tax's focus at the Smithsonian turned almost entirely to developing a program in "urgent anthropology" on a global scale, leaving the future of the other three programs largely at the discretion of his Smithsonian colleagues.

Birth of the *HNAI* Project, 1965–1966

The first documented summary of the *Handbook*'s advent appeared in 1967 in a memo written by general editor, William Sturtevant (Sturtevant 1967e). Following a laudatory description of the original BAE *Handbook* (Hodge 1907–1910) and with references to the subsequent *Handbook of South American Indians* (Steward 1946–1959) and the *Handbook of Middle American Indians* (Wauchope 1964–1976), Sturtevant detailed the events surrounding the birth of the new series as follows:

The suggestion that we issue a new *Handbook of North American Indians* was made by J[ohn].C. Ewers and W[aldo].R. Wedel in December 1965, in response to a call for project ideas issued to the SOA staff by Prof. Sol Tax in his new role of catalyst and adviser. The first result of the ensuing discussion was that Clifford Evans volunteered to prepare and mail a questionnaire on the desirability and possible format of such a handbook, and to analyze the replies. He quickly prepared a draft questionnaire and mailing list, incorporated some suggestions from SOA North Americanists, and mailed the questionnaire to about 450 anthropologists, historians, and other potential users and contributors. His report on the 250 or so replies received [by May 31, 1966] indicated great enthusiasm among respondents and gave indications of the most usable general format (e.g., a topical rather than alphabetical arrangement of articles as preferred by most).

At this point Evans relinquished direct involvement in the project. . . . The only volunteer for the job of editor

was Sturtevant; his offer was accepted by the staff, and he has been conducting the planning since about May 1966 (Sturtevant 1967e:2–3).

While Sturtevant's 1967 account seems to put the key elements of the series origins in order, the actual circumstances underlying the project's beginnings were more complex. The first documented reference to a new *Handbook* actually appeared in a memo dated December 28, 1965, written by ethnologist John C. Ewers (b. 1909, d. 1997), North American curator and Plains ethnologist (fig. 4), in response to a query sent by Sol Tax to all SOA anthropologists following his appointment as their (informal) head and Ripley's lead advisor. Although mostly an outline of Ewers' personal research interests, the memo also mentioned prospective ventures of broad interest to the entire SOA staff—including "a revision of the BAE Bulletin 30, *Handbook of American Indians North of Mexico*." After praising the original BAE *Handbook* and listing some of its shortcomings, Ewers expressed his interest in such a project but cautioned that the extent of the undertaking would require a "full-time editor, with full-time assistants" (Ewers 1965:3–4).

A few days later, Ewers wrote to archaeologist Richard Woodbury (b. 1917, d. 2007), then the head of the Department of Anthropology at the U.S. National Museum and asked him to distribute copies of his earlier memo to Tax to the rest of the SOA staff (Ewers 1966a). In this second memo, Ewers expanded on his reasons for a revised *Handbook*, stressing its significance for keeping the Smithsonian at the forefront of Native American scholarship:

If we don't do these things [update the *Handbook*], others will. . . . Historians, anthropologists, writers, editors and Indian buffs will welcome the day when it is announced that the SI is going to revise the *Handbook* in a scholarly fashion. They will know then that the SI is serious in its intentions to carry on its great tradition in American Indian research (Ewers 1966a:1).

Ewers's idea to revise the old BAE *Handbook* was instantly popular among his colleagues. Archaeologist Waldo R. Wedel (b. 1908, d. 1996) expressed enthusiasm about the idea in his own memo to Tax, in which he praised the first BAE *Handbook* and stated that no single Smithsonian publication in anthropology had been "more widely used by anthropologists, historians, historical writers, university press editors, and others whose researches and writings bring them into contact with Indian tribes and . . . Indian activities of various sorts." Yet, echoing Ewers' cautionary words about the scope of the project, Wedel commented that producing a revised *Handbook* "would certainly run into

Smithsonian Archives (top row: 92-1794, OPA-1184-18, SIA-2002-1278; bottom row: n.n., 2001-7260, SIA2013-04196).

a very large operation culminating in a multi-volume work . . . (and) would require a skilled and highly competent editor, plus substantial financing and co-operation of many experts and specialists both inside and outside the Smithsonian.” Putting such production logistics aside, he, nonetheless, assured Tax that “with something like this available, the Smithsonian’s image would be greatly improved” (Wedel 1966:1–2).

Tax, however, appeared less enthusiastic about the idea of launching a revision of the BAE *Handbook* among the slew of his newly proposed projects. At a follow-up meeting with the SOA staff held in late January 1966, he listed the *Handbook* as a second-tier item in his plans for the SOA’s future, placing it below other activities he hoped would make the Smith-

sonian “the center of Anthropology nationally and in the World Anthropology” (SOA 1966a:2). He instead outlined his own proposal for a special North American Indian program for the SOA with two possible research directions. The first would “collate already available material in order to have a revised Handbook of North American Indians,” while the second would take the form of a “Myrdal-type study of the Indian in American Society.” This second idea referenced Gunnar Myrdal’s influential publication, *An American Dilemma: The Negro Problem and Modern Democracy* (Myrdal 1944). The latter had relied primarily on contemporary demographic and sociological data, along with social theory, to understand the matrix of American society in the early 1940s. Because of its

sociological angle, Myrdal's text employed very different research methods than the more standard ethnographic accounts that had composed the original BAE *Handbook* (see "Antecedents of the Smithsonian *Handbook* Project," this vol.). While Tax voiced a preference for a Myrdal-like model as a structure for the future "handbook"—no doubt influenced by his close associations with the sociologists at the University of Chicago—the Smithsonian anthropologists unanimously favored the old BAE encyclopedic/descriptive template, with which they were closely familiar. It had been a prominent part of their institutional legacy (at least for the North Americanist faction); it also reflected the methodological preferences of most museum anthropologists working in the mid-twentieth century. This point of tension quickly came to a head. In a subsequent memo written to Woodbury, Ewers stressed Tax's unwillingness to accept criticism and charged his Smithsonian colleagues "to stand up and be counted on this issue, especially if it should mean a choice between this [a sociologically oriented approach] and a revision of the [BAE] *Handbook*" (Ewers 1966b).

Yet, during the early months of 1966, Tax's interest in developing a Smithsonian program on North American Indians was largely overshadowed by his involvement with planning a conference called Changing Cultures, cosponsored by the Smithsonian and the Wenner-Gren Foundation. This three-day gathering centered on the development of the Smithsonian urgent anthropology program and saw the arrival of some 50 participants, including many anthropological luminaries, such as Claude Lévi-Strauss, Margaret Mead, Fredrik Barth, and George P. Murdock, among others (Sturtevant 1967g).

Despite the presence of such renowned scholars, most members of the SOA viewed the event as a mere distraction from their museum responsibilities, with the exception of William Sturtevant, who embraced the possibilities for international collaboration offered by the conference and played an integral role in its organization. Whereas Sturtevant turned his attention to assisting Tax with conference logistics, the rest of the Smithsonian Americanist anthropologists continued their discussion of potential proposals for a new *Handbook*. Again, Ewers volunteered an early outline for the project, noting that the first step would be to identify an editor who could take on the project for about ten years, someone, in his description, who would be "a good GS-17 [senior scientist, the highest federal level]," ideally someone in his middle 50s, who would regard this as a super-challenge (Ewers 1966b).

Other SOA members, including archaeologist Henry B. Collins (b. 1899, d. 1987), Wedel, Wood-

bury, and, again, Ewers shared their views on the future *Handbook* in personal memos sent to Clifford Evans (b. 1920, d. 1981), curator of South American archaeology (fig. 4). Evans had emerged as the leader of this small group in the spring of 1966 and volunteered to compile various responses and proposals to chart a common course of action. His enthusiasm for the venture was evidently fueled by the recent launch of the *Handbook of Middle American Indians* series and the release of its first volume (Evans 1966a; Wauchope 1964–1976; West 1964; see "Antecedents of the Smithsonian *Handbook* Project," this vol.). In Collins' memo, he relayed to Evans that the revised *Handbook* should "follow the alphabetical—dictionary, encyclopaedia, gazetteer—form of Bulletin 30 [the original BAE *Handbook*]" as the most useful arrangement and stressed that having separate, topical volumes would be distracting, and perhaps not really necessary (Collins 1966). Woodbury, on the other hand, proposed an organizational structure of 12 thematic volumes arranged alphabetically "with some long articles and very many short ones" (Woodbury 1966). His list of prospective volumes included:

- (1) Geography, Culture and Natural Areas, Linguistics, the History of the Study of the American Indian; (2) Physical Anthropology, including Racial History, Population, Health, and Disease; (3) History of Indian-White Contact [continuing through the modern period]; (4–7) [no titles]; (8) Southeast; (9) Arctic; (10) Archaeology of the Western United States and the Arctic; (11) Archaeology of the Eastern United States; and (12) Synthesis and Cultural Inventory.

Upon his return to the discussion following the urgent anthropology conference, Sturtevant emphasized the need for special volumes on Native American ethnology, physical anthropology and demography, archaeology, and linguistics (Sturtevant 1966c).

In response to the suggestions submitted by his SOA colleagues, Evans compiled a seven-page questionnaire and circulated it to 450 Americanist scholars in April 1966. In the attached cover letter, he declared that the anthropologists of the Smithsonian Institution believe that "the time is opportune to plan a new *Handbook of North American Indians* [and] . . . the Smithsonian Institution administration has expressed sufficient interest for the staff to consider seriously what type of handbook would be most useful" (Evans 1966b:1). He also asked respondents to indicate whether the future *Handbook* should be framed in an encyclopedic style, from A through Z, "using as many volumes as necessary," or arranged by volumes, according to geographic or culture areas. He explicitly named some possible areas for coverage, including the Arctic, Northwest Coast, Great Basin–Plateau,

West Coast and Desert, Southwest, Southeast, Northeast, and Plains (Evans 1966b:4). In doing so, Evans's detailed questionnaire helped introduce plans for the Smithsonian *Handbook* to the broad anthropological community with three underlying messages. First, the publication would be a *new* handbook, not a revision or an update of the 1907–1910 BAE set. Second, it would be a multivolume series. Finally, the Smithsonian administration would likely fund and publish it. Perhaps most importantly, by circulating their plans within the broader scholarly community, the Smithsonian curators effectively claimed the *Handbook* as a primary new undertaking of the SOA and not as its secondary project as had been proposed by Tax.

By mid-May 1966, more than 200 Americanists replied to Evans' questionnaire. Their responses were mixed, with no clear majority favoring either the encyclopedic or thematic organization for the new series (Ewers 1966c). Ultimately, however, this survey would have little impact on the *Handbook's* future structure. This is because two days before the questionnaire's deadline, sixteen SOA staff members (including Tax) unanimously nominated Sturtevant, then not yet 40 years of age (fig. 5) to the position of the series general editor (see "William Curtis Sturtevant, General Editor," this vol.). Though Evans still submitted an update on the responses from the questionnaire to his colleagues, Sturtevant's nomination to the helm

of the *Handbook* made these opinions moot, since Sturtevant strongly advocated for the thematic organization of the series (Sturtevant 1966d). Consequently, many of the senior Smithsonian curators who had initially favored the shorter alphabetic and encyclopedic format for the *Handbook* opted to leave the project and its planning to Sturtevant's discretion.

In addition to Sturtevant's appointment as general editor, another development took place in 1966 that would have a substantial impact on the *Handbook's* production. Upon Tax's suggestion, the Smithsonian hired Samuel L. Stanley (b. 1923, d. 2011) (fig. 6), a former PhD student of Tax's at the University of Chicago (with his PhD thesis on historical changes in the Tlingit social structure in southeast Alaska; Anonymous 2011c; Stanley 1958; Stanley et al. 1959), to help oversee the activities of the SOA. While initially perceived by SOA staff as another attempt by Tax to prioritize plans for world anthropology over other Smithsonian projects, Stanley's hire actually contributed much-needed groundwork for the new *Handbook*. With the help of numerous summer interns and SOA fellows, Stanley initiated the indexing of all 12,800 entries from the old BAE *Handbook* volumes onto catalog cards, which could later be sorted by topic and/or tribal name (J. Scherer, personal communication, December 11, 2017; Sturtevant 1967e:4).

In September 1966, Sturtevant drafted a public announcement outlining the Smithsonian's plan for a

National Anthropological Archives, Smithsonian Institution.

circa 1966.

“thoroughly revised and updated edition of the *Handbook of American Indians North of Mexico*” to be published by Smithsonian Institution Press (Sturtevant 1966e). It specified that the proposed *Handbook* would include 15 or more volumes overseen by an editorial board consisting of SOA staff with strong research interests in North American Indians (specifically listed were Collins, Ewers, Stanley, Stewart, Sturtevant, Tax, Wedel, and Woodbury) and with Sturtevant as general editor. By the time the editorial committee met in October 1966, Sturtevant’s outline for the new *Handbook* had grown to include 17 volumes (Sturtevant 1966g) (table 1). This structure would provide the blueprint for all further outlines for the *Handbook* series up until the start of its active planning in 1971–1972 and the subsequent production in 1978 (see “The *Handbook*: A Retrospective,” this vol.).

The outline also introduced the new title for the series, *Handbook of North American Indians*, and indicated some new themes that would be treated therein. These included: the reciprocity of cultural exchange between Indigenous and Western cultures, Native Americans’ contribution to American life in art and economy, and the history of “the contribution to knowledge” resulting from North American Indian studies (Sturtevant 1966g). Thus, from the beginning,

Table 1. Tentative Contents for New N.A. Indian Handbook, Prepared by William C. Sturtevant (possibly with Samuel Stanley’s assistance)

Volume 1: Origins (Land, People, and Cultures, mostly from an archaeological perspective)
Volume 2: General History (including the contact era, history of Indian administration, pan-Indianism and Indian rights associations, i.e., contemporary movements)
Volumes 3–12: Regional volumes by culture areas (to be arranged along a standard template; nine areas were named: Eskimo (Arctic), Subarctic, Northwest Coast, California, Southwest (almost certainly two volumes), Basin-Plateau, Plains, Northeast, Southeast)
Volume 13: Artistic Creativity of North American Indians (including dance, music, literature, and craftwork)
Volume 14: Comparative Ethnology (including social organization, culture change, and modern communities, 1940–1970)
Volume 15: Linguistics (including sociolinguistics and ethnolinguistics)
Volume 16: Biographical Dictionary
Volume 17: General Analytical Index

SOURCE: Sturtevant 1966e; Stanley 1966.

the *Handbook* planners tried to balance the basic encyclopedic approach aimed at general readers with more modern and overtly sympathetic perspectives on the role of Native Americans in the formation of the broader American society.

News that the SOA would undertake a revised multivolume edition of the *Handbook of North American Indians* was quickly circulated at the meetings of major anthropological societies, including the American Anthropological Association on November 17, 1966 (Sturtevant 1966e), and through notifications mailed to about 1,000 specialists on Native North Americans previously identified by Stanley. With these public announcements, the vision of a multivolume encyclopedic series in the footsteps of the BAE venerable Americanist tradition had put to rest any possibility of Tax’s proposal for a Myrdal-like sociological survey of contemporary Native Americans.

Native American Activism and Transformations in American Anthropology, 1965–1968

The launch of the *Handbook* series did not happen in a vacuum but proceeded within the broader social context of the 1960s, a time of dramatic transformations in

the American public mind affected by the Civil Rights Movement, the Vietnam War protests, cultural radicalization, and other events of the time. Several developments also took place in areas directly related to the *Handbook's* area of focus, namely the rise of American Indian political activism, the institutional growth of North American anthropology, and an internal crisis within anthropology that reached its peak in the aftermath of Vietnam (see Bunzl 2005; Darnell 2002; H. Lewis 2009, 2014; Link 2016; Trencher 2000). Of these transformations, the rise of Native American political activism presented a watershed to Americanist studies in the 1960s. Its notable hallmarks included the American Indian Chicago Conference of 1961, the establishment of the National Indian Youth Council (1961), the struggle for Native American fishing rights (1964–1968), land claims and the fight against tribal termination policy, the birth of the American Indian Movement (AIM) in 1968, “Red Power” activism, and the occupation of Alcatraz (1969–1971). These events in turn occupied myriad professional books and papers, many of which were later reviewed in the *Handbook* series (e.g., Borrows 2008; Burch 1985; Deloria 2008; Hertzberg 1988; Imai 2008; Lurie 1988; G. Roth 2008b).

Discussions about the *Handbook* beginnings, therefore, could not ignore developments in Native American activism and anthropologists' responses to it. Prior to Tax's 1965 arrival, Smithsonian anthropologists interested in North American Indian societies engaged mostly in the classic Smithsonian mission of the “increase and diffusion of knowledge,” meaning the pursuit of traditional academic and museum research in Native American ethnology, as well as in early history and origins. Tax's emergence as Ripley's advisor on anthropology and intellectual driver of SOA helped alter this formally detached stance, as his close ties to Native American communities and his own political activism bled into his approach to Smithsonian anthropology (J. Smith 2010; Stocking 2000). Tax had acted as key organizer of the American Indian Chicago Conference in 1961 that brought together 760 Native American activists from 90 tribes and tribal groups across the United States and Canada (Ablon 1979; Lurie 1961b; Stanley 1996). The conference resulted in a “Declaration of Indian Purpose,” a statement of concerns and recommendations with an emphasis on tribal sovereignty and preserving American Indian and Alaska Native identity that was later delivered to President John F. Kennedy. It was a catalyst for Native American consciousness and marked the first attempt to stake a unified Native American position against the U.S. federal policies towards Indigenous Americans. Many proposals debated at the

conference were implemented in the 1960s with tribal specific policies included in the Great Society programs (Fixico 2013b; Hauptman and Campisi 1988; Hertzberg 1988; Josephy et al. 1999; Lurie 1988; McKenzie-Jones 2014; Stapp 2012).

Tax, along with Stanley, thus helped introduce a radically different approach to “American Indian studies” to Smithsonian anthropology, one that sought to mobilize anthropological materials and expertise for congressional committees on topics including American Indian policies, education, and economic development (Tax 1962, 1968a; Tax and Stanley 1960). These pursuits often brought them into direct involvement with Native political actions; Tax and Stanley (as well as Sturtevant) were members of the academic “support committee” for the Native American activists occupying Alcatraz in 1969–1971, in which Tax took a leading role. He even made a visit to the island, albeit as a private citizen and not as an official representative of the Smithsonian (Talbot 1997:109–110; Tax 1970:2; see also Deloria 2008; Johnson 1996; Smith and Warrior 1997).

Another milestone event with a strong impact on the *Handbook* was the publication of Vine Deloria, Jr.'s *Custer Died for Your Sins: An Indian Manifesto*, especially its chapter on “Anthropologists and Other Friends” (Deloria 1969a, 1969b; see “Codes of Ethics,” this vol.). Deloria reproached anthropologists for their lack of ethics and for the long tradition of paternalism toward American Indians (Bailey n.d.; Biolsi and Zimmerman 1997a; DeMallie 2006; Martínez 2019; Stull 1999). His scathing criticism triggered heated debates and influenced dramatic changes in how academic scholars viewed their work about, with, and on behalf of Native American communities. In May 1971, the American Anthropological Association adopted its first professional code of ethics, “Principles of Professional Responsibility,” which asserted anthropologists' paramount obligation to those they study (AAA 1971; see “Codes of Ethics,” this vol.).

At the *Handbook* level, the increased importance of Native American activism for and within anthropology prompted the decision to include a new volume in the series entitled *Indians in Contemporary Society* (vol. 2). It also invigorated the search for Native American contributors and editors who could bring Native perspectives to *Handbook* topics. Deloria himself would eventually become the editor for that volume, following the passing of its originally assigned editor, D'Arcy McNickle (Bailey 2008a; see “The *Handbook*: A Retrospective,” this vol.).

Besides increased social activism, the 1960s also witnessed an unparalleled institutional growth in American anthropology fueled by the overall expansion

in higher education and scientific research following World War II and, particularly, in response to the launch of the Soviet satellite Sputnik in October 1957. Between 1958 and 1970, U.S. national spending on research and development almost doubled, growing from \$50.5 to \$90.5 billion, whereas the annual number of doctorates awarded in all disciplines rose almost fourfold (from 8,611 in 1957 to 33,755 in 1973; Thurgood et al. 2006:7). Anthropologists played only a small role in this process, yet the field benefited from the “high-tide” environment for research and higher education.

The body of tenured faculty in North American anthropology graduate departments surged to more than 4,200 in 1975/1976 from less than 800 in 1963/1964 (Anonymous 1963–1964; Krupnik 2016; Vorwerk 1975; Woodbury 1969). Between 1960 and 1976, the number of PhD degrees in anthropology awarded annually by all North American universities increased fivefold; as a result, the number of attendees and sessions at anthropological meetings, especially the AAA, skyrocketed (H. Lewis 2009:205). Similar (albeit smaller) growth also occurred in Canada, where the ranks of anthropology faculty swelled from a “handful” in 1950 to more than 120 in 1970 (Graburn 2006:244). Notably, between 1960 and 1975, Canadian universities and museums launched a dozen new serial publications in anthropology and northern development, many in response to First Nations’ land claims and to an increased demand for data on social and economic issues.

The growth in North American anthropology enabled increased specialization within the discipline. New professional groups and their associated meetings and publications proliferated. Such groups included (but were not limited to) the Northeastern Anthropological Society (established in 1961), the Southern Anthropological Society (1965), the Canadian Archaeological Association (1968), the Algonquian Conferences (1968), the Northern Athapaskan Conferences (1971), and the Hunter-Gatherers conferences (1966). Thus, by the close of the 1960s, the planners of the Smithsonian *Handbook* had at their disposal a pool of hundreds if not thousands of prospective authors located across the United States and Canada and connected through professional scholarly networks, who could contribute their knowledge and expertise to the series.

Whereas North American anthropology continued to grow in size and specialization, a sense of unease also settled into the discipline. Beginning in the early 1960s, the field experienced a series of political, ethical, and intellectual crises. At the core of these conflicts was the involvement of anthropologists in activities abroad, many sponsored by funding from the U.S. government intelligence or international

development programs (Cooper and Packard 1997; D. Price 2008, 2016; Trencher 2000). In 1965, it was revealed that some anthropologists had been involved with planning for Project Camelot, an American counterinsurgency effort funded by the U.S. Department of Defense that sought to apply social scientific data toward monitoring social movements and communist activities in Latin America (Horowitz 1967; Solovey 2001). This discovery escalated tensions fueled by other political and military conflicts of the period, especially the U.S. involvement in the Vietnam War. These conflicts inspired the AAA to organize a review committee on the problems of research and ethics in anthropology and to pass an official resolution condemning warfare and other acts harmful to human beings (AAA 1966). It also inspired younger scholars in the field to launch a series of scathing critiques of the discipline’s involvement in colonial and postcolonial projects, and the eventual coinage of anthropology’s moniker as the “handmaiden of colonialism” (Gough 1968; Lewis 1973; H. Lewis 2009, 2014; Stauder 1972). By the late 1960s and early 1970s, influential books, including Dell Hymes’s *Reinventing Anthropology* (Hymes 1972) and Talal Asad’s *Anthropology and the Colonial Encounter* (Asad 1973), as well as scores of journal articles, called for a reassessment of anthropology’s obligations to its subjects of study, marking the beginning of what is now referred to as the discipline’s “reflexive turn” (Bunzl 2005).

Institutional Obstacles in the *Handbook* Planning, 1967–1969

Amid these disciplinary transformations and debates, the *Handbook* planners presented an upbeat assessment of their progress in the Smithsonian’s 1966 Annual Report (Sturtevant 1967a, 1967e). In reality, little had happened in the next two years, between 1967 and early 1969 (Sturtevant 1968d). Part of the delay had to do with Sturtevant’s absence from the Smithsonian while abroad on sabbatical in Europe and Asia (see “William Curtis Sturtevant, General Editor” this vol.). In his absence, the *Handbook* continued mostly under Stanley, who focused on various technical tasks, such as reworking files according to subject areas and developing a future list of prospective articles and an outline of volume contents (Stanley 1967; Sturtevant 1967e:4–5; Sturtevant 1969c:2–3).

Another significant cause for the delay in the *Handbook*’s production was a lack of funding. In 1967, the SOA’s overall budget had been cut by almost \$100,000 owing to the redistribution of government funds to support the war in Vietnam; no funding

was allocated for *Handbook* activities. The *Handbook* team desperately needed a show of Smithsonian commitment, especially in the form of a stable budget and salaried positions. This commitment came in 1968 only, when Ripley agreed to add the *Handbook* as a discrete line item to the Smithsonian annual appropriation request for fiscal year 1969. In his request to the U.S. Senate Committee on Appropriations, Ripley called the *Handbook* a “collaborative effort between universities, museums, and Government agencies” and elaborated that “over the next 10 years these other organizations will contribute about 420 man-years of time and effort on the revision of the handbook, worth in this sense about \$3.5 million” (U.S. Department of the Interior 1968:2136). He also claimed that the Smithsonian would contribute about \$700,000 during this 10-year period and asked the Senate committee for a very modest investment to finance one technician position to work on the *Handbook* and for \$26,000 to advance the project. Even such a modest request was ultimately denied.

Another minor but not insignificant factor in slowing *Handbook* progress was the persistent tension among SOA staff following the 1965 merger of the BAE and the Department of Anthropology and Tax’s subsequent appointment as Ripley’s advisor on anthropology (Merrill 2002a:22–24). Tax’s ambitious vision to reorient the Smithsonian as a center for world anthropology received strong resistance from many SOA members who worried about the impact of his international programs on their curatorial and research operations. In October 1967, Richard Woodbury, the retiring Anthropology chair, warned his successor, ethnologist Saul Riesenber (b. 1911, d. 1994), that the department needed to be “more realistic in recognizing the effect that these things [i.e., urgent anthropology] are having and will have in the future on our own individual research activities. Old-fashioned as it may seem, we may find that we can’t have it both ways” (Woodbury 1967).

Recognizing these tensions, Tax appealed to Ripley to reallocate the remaining SOA funds for fiscal year 1968 toward the development of new archives, catalogs, and programs where the results of international anthropological research could be consolidated and applied to future projects (Tax 1967a, 1967b). Additionally, he proposed the creation of a separate unit at the Smithsonian that would prioritize the collaborative interdisciplinary initiatives he and Ripley had envisioned in 1965. He called it the Center for the Study of Man (CSM) and recommended that it be put directly under Ripley’s supervision, where it could maintain an independent budget that would not interfere with the museum functions of the SOA (Tax 1967b; Link 2018).

At Tax’s suggestion and based on the recommendation of an external review committee composed of archaeologist and future Smithsonian secretary Robert McCormick Adams (b. 1926, d. 2018), ethnologist Ward Goodenough (b. 1919, d. 2013), linguist Floyd Lounsbury (b. 1914, d. 1998), and primatologist Sherwood Washburn (b. 1911, d. 2000), in July 1968, Ripley redivided the SOA into the Department of Anthropology at the National Museum of Natural History and the CSM. Ripley established the CSM as a separate bureau (though physically housed at the Museum of Natural History) comparable in rank to the other Smithsonian units administratively placed under the Office of the Secretary. He appointed Tax as the CSM’s acting director and assigned Sam Stanley as program coordinator (Tax 1968b).

In keeping with Ripley’s interests in bridging Smithsonian anthropology with environmental conservation efforts, the new center’s activities were intended to “serve the needs of SI staff and scholars from outside whose interests lie in anthropology, archaeology, human ecology, and other fields concerned with appraising man’s interrelationship with his physical, biological, and cultural environment” (SOA 1968:1). Tax suggested several provisional programs for the center, including the development of a new Museum of Man (Walker 2013), an anthropological film and manuscript archive (the future Human Studies Film Archives and National Anthropological Archives), and the creation of a worldwide anthropological exchange program (Tax 1968c; Link 2016). The SOA, in the meantime, remained a unit within the Museum of Natural History and soon regained its old name, the Department of Anthropology, at which point the short-lived SOA title quietly dropped off (Cowan 1969:66). Although the primary focus of the CSM was on international issues and projects, it also included an American Indian Program, consisting of two rather disjointed parts: the *HNAI* project led by Sturtevant and an amalgamation of other activities supervised by Stanley that focused on contemporary Native American issues (SOA n.d.; Tax 1970). The *Handbook*, as a result, came to be administratively tied to the CSM’s budget, where it remained for almost eight years from July 1968 until early 1976, when the center was closed (Link 2021).

Yet, despite the inclusion of American Indian programming, the orientation of the CSM remained deliberately international. Of the CSM’s initial 18 members, 5 were from institutions outside of the United States (Claude Lévi-Strauss, Surajit C. Sinha, Mysore Narasimhachar Srinivas, Chie Nakane, and Fredrik Barth), and 4 were from American universities (Dell Hymes, Douglas Schwartz, George Stocking, and Sherwood Washburn) (fig. 7). Representatives from the SOA’s

Fig. 7. Meeting of the Center for the Study of Man (CSM) staff and board, May 19, 1970. left to right, William C. Sturtevant, Robert M. Laughlin (both Department of Anthropology, NMNH); Sol Tax, University of Chicago, special advisor and acting director; Sam Stanley, CSM; Mysore N. Srinivas, University of Delhi, India; Douglas W. Schwartz, director of the School for American Research, Santa Fe, New Mexico; T. Dale Stewart, Department of Anthropology, NMNH; Fredrik Barth, University of Bergen, Norway; Wilcomb E. Washburn, Department of American Studies, Smithsonian Institution; Laila Shukry El Hamamsy, American University in Cairo, Egypt; George W. Stocking, Jr., University of Chicago, Illinois; Surajit C. Sinha, Anthropological Survey of India, Calcutta; Gordon D. Gibson, Henry B. Collins (both Department of Anthropology, NMNH). (NAA, CSM Box 141)

staff included Sturtevant, Collins, Ewers, Stewart, and Wedel (all of whom were North Americanists), African ethnologist Gordon Gibson (who was put in charge of developing the ethnographic film program), and Meso-american ethnologist Robert Laughlin, responsible for compiling an up-to-date bibliography of anthropological publications (Tax 1968b; 1969:315–316). Another Smithsonian person assigned to the center was historian Wilcomb Washburn (b. 1925, d. 1997) from the Museum of History and Technology, who later served as the editor of volume 4 of the *Handbook* (Washburn 1988a). The CSM's focus on global issues and networks further increased in the early 1970s with Tax's election as president of the International Congress of Anthropological and Ethnological Sciences (ICAES, September 3–10, 1968). For the next five years, and especially from 1970 to 1973, his attention was directed toward planning ICAES events, which further distanced him from the *Handbook's* operations.

In spring 1969, Ripley again turned to Congress to obtain supplementary funding for CSM operations. Somewhat surprisingly, he highlighted the production of the *Handbook*, calling it “the definitive work in the field of North American Indian cultures . . . (to

be supported by) over 2000 experts in various aspects of Indian culture who are willing to contribute their time toward the revision of this Handbook” (U.S. Department of the Interior 1969:808). This time, he requested \$20,000 from Congress to fund the hiring of an additional staff member who could help with the project. Although Congress granted his request, these funds ultimately went toward hiring Priscilla Reining, who was instead assigned to work as the urgent anthropology program coordinator under Stanley with no immediate benefit to the *Handbook* project.

The following spring, Ripley's persistent fundraising efforts finally resulted in a major breakthrough for the *Handbook's* production. He requested an additional \$45,000 from Congress in 1970 to hire an editor, a research assistant, and a clerk-typist for the *Handbook*, as well as funding for several short-term contracts. Once again, he emphasized the *Handbook's* intellectual value, assuring Congress that “the revised Handbook will become the standard reference work on all aspects of North American Indian history and cultures for students, teachers, authors, researchers, and administrators, both Indian and non-Indian.” He also stressed that while the *Handbook* was now at a

511

point where production could begin, that any further delays would lead to “the disillusionment of the academic community whose support as contributors and advisors is essential” (U.S. Department of the Interior 1971:3496). This time, his persistence paid off.

***Handbook* Planning Starts in Earnest, 1970–1971**

In the summer of 1970, the Smithsonian received funding support for three new positions to begin working on the *Handbook*. It resulted in the hiring of Carol H. Blew, who served as editorial assistant from 1970 to 1972, and Marianna Koskouras, who acted as the *Handbook* secretary from 1970 to 1973 (Sturtevant 1970d:3). In October 1970, Joanna Cohan Scherer joined the *Handbook* office as illustration researcher (see “Production of the *Handbook*, 1970–2008,” this vol.). These individuals composed the original *Handbook* “army of three” before more people joined the team in 1971–1972. Their addition to the *Handbook* project augmented the earlier efforts made by Stanley and Sturtevant and finally allowed production of the *Handbook* to begin in earnest.

Building on this momentum, on March 23, 1970, a week after the Senate approved the *Handbook*’s funding, Sturtevant presented a detailed blueprint for the *Handbook* series production in a memo addressed to Sidney Galler, Smithsonian Under Secretary for Science (Sturtevant 1970b:1–3). In the memo, he laid out the following operating procedures: (1) prepare a general outline (table of contents) for the series, (2) solicit editors for individual volumes, (3) convene a general planning session of volume editors and other experts in late spring of 1970, (4) organize planning meetings for individual volumes to identify chapters and chapter authors, and (5) send invitations to authors no later than September 1, 1970. In Sturtevant’s mind, “with the usual lags” this timeframe would allow publication to be well underway by 1976 (Sturtevant 1970b:3). His proposed schedule worked nearly flawlessly, as the process of recruiting *Handbook* editors and contributors, planning for the volumes, and soliciting chapters initially all happened on track to meet the estimated 1976 deadline (see “The *Handbook*: A Retrospective,” this vol.). Only at the end did Sturtevant’s plan falter, as the first volumes would not be published until two years later in 1978 (see “Production of the *Handbook*, 1970–2008,” this vol.).

Sturtevant’s estimated 1976 deadline for the *Handbook* completion, however, proved quite significant for the project’s eventual success, as it coincided with the major government effort in planning for the bi-

centennial of the American Revolution (1776–1976). In 1966, the U.S. Congress established the American Revolution Bicentennial Commission. Four years later, the Smithsonian received \$400,000 from the Commission to develop related programming and activities in Washington, D.C. (Walker 2013:153–195). These programs included two major exhibits—*The American Experience*, which eventually evolved into 23 exhibitions and public projects across the institution, and *A Nation of Nations* (1976–1991), at the Museum of History and Technology (renamed the National Museum of American History in 1980). Another proposed Smithsonian contribution to the bicentennial was a Bicentennial Park constructed along the Potomac River (U.S. Department of the Interior 1971:853–854). Ripley’s office also decided to tie the *Handbook*’s production to the Smithsonian’s publicity aims for the American bicentennial, since the *Handbook*’s subject matter addressed a lesser known yet significant chapter in America’s history (Stanley 1970c).

With Ripley’s endorsement and initial funding secured, Sturtevant and Stanley worked throughout 1970 and 1971 to finalize the cost estimates for publishing the *Handbook* with the Smithsonian Institution Press. They pitched a series of “20 volumes of average 500 printed pages, presumably well illustrated with photographs and diagrams in black and white,” at an initial quote of half a million dollars from the press (Richter 1970:1). By 1971, the estimated size of each *Handbook* volume increased to 750 pages, including 500 pages of text and 250 pages of references, illustrations, index, and other matter. In a letter to SI Press director Gordon Hubel, Stanley reiterated Sturtevant’s production schedule for the *Handbook*, assuring the press that the manuscripts would be due to the editorial office by June 1972, to the printers by May 1974, and that all 20 volumes would be published by June 25, 1976—just in time for the bicentennial’s Fourth of July celebrations. Reflecting his commitment to Native American activism, Stanley also indicated that at least five hundred 20-volume sets of the *Handbook* would be delivered free “to Indian tribes, Indian schools, Indian Studies programs and various Indian organizations” (Stanley 1971b:2).

Noting these increased estimates, in September 1972, the Smithsonian made a special request for an additional \$180,000 to cover the *Handbook*’s printing costs for fiscal year 1974 as part of its \$2 million “Bicentennial Appropriation” (Smithsonian Institution 1972a). Ripley continued to request funds for the *Handbook* as part of the Smithsonian bicentennial expenditures until he secured enough money, a total of \$930,000, to ensure the series’ publication in 1978 (Jameson 1976:1; Sturtevant and Heizer 1978: xv).

Sturtevant spent most of the year 1971 painstakingly building the *Handbook* production infrastructure that he outlined in his memo to Galler in March 1970, namely in appointing volume editors, establishing the series editorial board, and in organizing numerous planning meetings for the series and its individual volumes (see “The *Handbook*: A Retrospective,” this vol.). By the end of 1971, all conditions seemed ripe for the *Handbook* to race from the editors’ desks to the printers’ presses in time for the bicentennial celebration and in accordance with Sturtevant’s original production schedule. Hardly anyone anticipated the challenges that the 20-volume series would soon face, when the first drafts of chapters commissioned for several volumes began pouring in in the winter of 1972 (see “Production of the *Handbook*, 1970–2008,” this vol.).

Conclusion

Fifty years later, the planning phase for the Smithsonian *Handbook of North American Indians* appears mostly as a success story. It took less than six years from the time John Ewers first penned the idea for a new handbook in December 1965 for the HNAI team to develop a full outline for the series, appoint its general editor and individual volume editors, and establish an editorial board and planning teams for almost all of its prospective volumes. By 1972, the Handbook office had its first active staff, secure funding for production, and the first solicited chapters already had begun to arrive.

The trials and successes of these early planning years could be assessed differently within various

disciplinary, institutional, and individual contexts. At a disciplinary level, the *Handbook* was born in an era of radical transformations that affected American society and, inevitably, anthropology’s identity as the field dedicated to understanding social and culture processes. Naturally, the *Handbook* planning reflected many of these changes. Perhaps the strongest indicator was the *Handbook*’s development from a series focused primarily on history, archaeology, and classical anthropological themes relating to Native Americans in the mid-1960s to one that would consciously and deliberately address contemporary matters in almost every volume. This transformation culminated in assigning a special volume *Indians in Contemporary Society* in 1970 that was eventually published in 2008 as HNAI volume 2 (Bailey 2008a; see “The *Handbook*: A Retrospective,” this vol.).

Within the shifting ideological and activist environment of the late-1960s, Smithsonian anthropologists could not look back to the “salvage anthropology” paradigm that had motivated the production of the *Handbook*’s esteemed precursor, the encyclopaedic BAE *Handbook* at the turn of the twentieth century (Hinsley 1981; Hodge 1907–1910). Rather, the HNAI planners were acutely aware of the need to produce an authoritative *modern* sourcebook on Native American communities useful to students, the general public, agency workers, and Native Americans themselves. They actively sought out and listened to prominent Native intellectuals of the period, including Vine Deloria, Jr., D’Arcy McNickle, and Alfonso Ortiz, in order to address and incorporate contemporary Native American issues and perspectives in the new series (fig. 8).

At the institutional level, the *Handbook* was but one of many developments that Ripley initiated as

Fig. 8. Sol Tax (left) and D’Arcy McNickle (Confederated Salish and Kootenai Tribes of the Flathead Reservation) at the seventeenth annual convention of the National Congress of American Indians, November 15, 1960 (NAA, HNAI Series 1, Box 84).

Smithsonian secretary in the 1960s and 1970s. Some of his visions for the institution were hugely successful, like the annual Smithsonian Folklife Festival (see Walker 2013) and the Smithsonian bicentennial activities. Others, however, largely fizzled, including the Smithsonian program in urgent anthropology (Link 2016). In the context of Ripley's overall legacy at the Smithsonian, the *HNAI* series remains one of his greatest lasting achievements. It helped turn the nation's attention to Smithsonian scholarship and reinforced the institution's prime role in facilitating the production and diffusion of knowledge on Native American societies, both historically and in the present (fig. 9). Moreover, it solidified the Smithsonian as a premier site for researchers interested in North American topics. From the 1970s through the 2000s, more than a thousand specialists in North American ethnology, archaeology, history, and linguistics would contribute to the *HNAI* series volumes under the careful guidance of its Smithsonian-based general editor and the *Handbook* production office (see "The *Handbook*: A Retrospective," this vol.).

In contrast to Ripley's institutional developments, Tax's ambitious agenda to turn the Smithsonian into

the center for world anthropology received mostly mixed results. The *Handbook* was a small element of Tax's global vision for the Smithsonian, one he never fully embraced and from which he distanced himself at an early stage. Yet the *Handbook*'s success can also be read in part as an outcome of Tax's inability to "globalize" Smithsonian, anthropology, even though some legacies of his engagement with the Institution, such as the National Anthropological Archives (NAA) and Human Studies Film Archives, thrive to these days. The eventual failure of his urgent anthropology agenda underscored the Smithsonian's historical attachment to the Americanist tradition and to the BAE scholarly legacy (see "Antecedents of the Smithsonian *Handbook* Project," this vol.).

Thus, at the individual level, several personalities undoubtedly contributed to the *Handbook*'s early success—namely, the confluence of Ripley's fundraising prowess, Tax's ambition and involvement with Native American activism, and Sturtevant's organizational forethought (fig. 10). When some of these elements began to wane, the *HNAI* series sputtered. Successive cohorts of Smithsonian administrators had neither Ripley's vision nor Tax's energy to bring the *Handbook*

to conclusion, and its continued production remained due to the dedication of Sturtevant and his editorial team until the ill-fated closure of the *Handbook* office in 2007.

Additional Readings

There is ample literature covering the life and scholarly and public career of S. Dillon Ripley, the eighth Secretary of the Smithsonian Institution, including several popular books (Coniff 2016; Dillon 2015; Stone 2017), numerous articles and obituaries (Beehler et al. 2002; Challinor 2003). On Ripley's role in organizing the bicentennial of James Smithson in 1965 see Oehser (1966). Link (2016, 2018) remains the most thorough study of the formative impact of Ripley's tenure on the development of the Smithsonian Institution's various science and public programs in anthropology, including the Center for the Study of Man (though with a limited focus on the *Handbook* project). For more details on Ripley's role in the development of the Smithsonian bicentennial-related program and specifically on the Folklife Festivals, see Cadaval et al. (2016) and Walker (2011), and for additional discussion of the never-built Museum of Man, see Walker (2013). For recent work on Smithsonian anthropology in the 1960s and 1970s, see Turner (2020) and Wintle (2016).

The life and professional work of Sol Tax has been also covered in numerous publications (e.g., Ablon 1979; Belshaw 2009; Hinshaw 1979; Lindee and Radin 2016; G. Smith 2010; J. Smith 2015; Stanley 1996, 2012; Stapp 2012, several individual entries; Stocking 2000), though with limited or little focus on his Smithsonian connections. Again, Link (2016, 2018, and 2021) remains the primary source on Tax's collaboration with the Smithsonian Institution and his many impacts.

There are few sources on the early history of the *Handbook* venture (e.g., Merrill 2002a; Sturtevant 1971f, 1981), besides scores of short summaries in the annual *Smithsonian Year* books for individual years (Cowan 1969; Tax 1969; etc.) and mostly anonymous entries in professional newsletters that were commonly written by Sturtevant (e.g., Anonymous 1971). The bulk of the information relevant to the history of the *Handbook* is preserved in the monumental documentary collection "Papers of the Handbook of North American Indians, circa 1966–2008" at the NAA (see https://www.si.edu/object/siris_arc_292686, active December 29, 2020), as well as in the personal papers of William C. Sturtevant and records of the Department of Anthropology at NAA. Additional substantial files related to the *Handbook*, SOA, CSM, and some key individual players—Ripley, Tax, Stanley, Washburn, etc.—are held at the Smithsonian Archives (e.g., <https://siarchives.si.edu/history/s-dillon-ripley>, active December 29, 2020). Several valuable documents, mostly copies of letters and memos, written and exchanged by Tax with his Smithsonian partners in 1965–1976 are preserved in Sol Tax's personal papers at the Hanna Holborn Gray Special Collections Research Center, University of Chicago.

Acknowledgments

The authors are grateful to Joanna Cohan Scherer and Janet Danek for their assistance in securing many documents critical to this summary of the early *Handbook* history, and to Ives Goddard, Curtis Hinsley, Ira Jacknis, Herbert Lewis, William Merrill, Joanna Scherer, and Michael Silverstein for their many helpful insights and comments on this chapter.

William Curtis Sturtevant, General Editor

WILLIAM L. MERRILL

William Sturtevant served as general editor of the *Handbook of North American Indians* for four decades, from 1966 until his death in 2007. During his tenure, he directed the planning of the entire encyclopedic work and provided both intellectual and editorial guidance in the completion of 15 of the 20 volumes envisioned for it. Fourteen of these volumes were published during his lifetime, between 1978 and 2006, while the fifteenth (Bailey 2008a) appeared a year after his passing.

Sturtevant (fig. 1) was in many ways the ideal person to direct this monumental undertaking. By 1966, he was already recognized as one of the leading North Americanists of his generation, and through his regular participation in scholarly conferences and the activities of professional organizations, as well as his research in museums, archives, and libraries in the United States, Canada, and Europe, he had established an extensive personal network of colleagues with whom he could consult in planning the new *Handbook*. Although most of his early research focused on the Native Americans of eastern North America, his

expertise encompassed the ethnology, culture history, and linguistics of Indigenous peoples throughout the Americas, and his competency in Spanish, French, and German afforded him access to most of the relevant published and unpublished sources.

Sturtevant's view of the anthropological enterprise as a whole also influenced his vision for the *Handbook*. He was firmly committed to the four-field approach in anthropology, which held that a comprehensive understanding of humanity required the perspectives of archaeology, ethnology, linguistics, and physical anthropology. From the outset of the *Handbook* planning, Sturtevant regarded the collaboration of specialists in all four subfields, as well as in history, art history, geography, paleoecology, and many other disciplines, as crucial to its success.

This essay provides an overview of Sturtevant's service as the general editor of the *Handbook* series within the framework of his development as a North Americanist and his research and other activities during his career as an anthropologist and museum curator. Additional biographical information on Sturtevant may be found elsewhere (Jackson 2007; Merrill 2002a; and Shapiro 2002).

The Early Years, 1926–1955

Sturtevant was born on July 16, 1926, at his mother's family home in Morristown, New Jersey. His mother, Phoebe Curtis Reed, attended Mount Holyoke College (BA in art, 1916) and completed a course in scientific design at the New York School of Applied Design for Women in 1917. In 1919, she began working as a scientific illustrator in the research laboratory of Thomas Hunt Morgan, professor of experimental zoology at Columbia University in New York. There, she met Sturtevant's father, Alfred Henry Sturtevant II, a member of Morgan's research team since 1910, and the two were married in 1922 (Mount Holyoke College, n.d; E.B. Lewis 1998:4–5). In 1928, Morgan accepted an invitation from the California Institute of Technology in Pasadena to create a new Division of Biology and invited Alfred Sturtevant to join him

there as a professor of genetics (A.H. Sturtevant 1959, 2001; E.B. Lewis 1995, 1998:5, 199; Shapiro 2002:4).

William Sturtevant, the eldest of three children in the family, completed his primary and secondary education in Pasadena and, in the spring of 1944, entered the University of California, Berkeley ("Cal"). He chose to major in anthropology, a subject that, together with the Indigenous cultures and societies of the New World, had fascinated him since early childhood (Merrill 2002a:11; Shapiro 2002:7–8). In the summer of 1944, he pursued these interests by taking courses on Mexican archaeology and South American ethnology in Mexico City at Mexico's National University. While there, he turned 18 and registered for the military draft at the U.S. Embassy, but he contracted hepatitis and was unable to return to classes in the fall or to begin military service. In March 1945, he was drafted into the U.S. Navy and served in the hospital corps, first in Calexico, California, and then in Guam. He was discharged from the Navy in September 1946 and returned to Cal soon afterward.

During his undergraduate years, he complemented coursework in anthropology by participating in 1947 in the University of New Mexico's archaeological field school at Chaco Canyon, New Mexico. This fieldwork afforded him an opportunity to visit Navajo and Rio Grande Pueblo communities. He also devoted considerable time to studying linguistics and foreign languages, including Chinese and Spanish as a freshman and French and German in the summer of 1949. Sturtevant graduated from Cal in 1949, receiving a bachelor's degree with highest honors in anthropology.

In the fall of 1949, Sturtevant began studies in Yale University's graduate program in anthropology. Upon the advice of Irving Rouse, a Yale professor who specialized in Caribbean and Florida archaeology, he decided to conduct his doctoral research among the Seminole of south Florida. He first visited Seminole communities in the summer of 1950 and concluded that he would conduct ethnographic and linguistic research there, focusing on the Mikasuki (Miccosukee) Seminole on the Dania (now Hollywood) and Big Cypress Reservations. He continued his fieldwork in the summer of 1951 and from the spring of 1952 to early 1953, collaborating most closely with Josie Billie, a Mikasuki ritual specialist from the Big Cypress Reservation (Sturtevant 1960b) (fig. 2).

Sturtevant devoted the remainder of 1953 and much of 1954 to writing his doctoral thesis, "The Mikasuki Seminole: Medical Beliefs and Practices," which he defended in 1955. In addition to providing a detailed ethnography of Mikasuki medicine, he compiled extensive information on Mikasuki ethnobotany and contextualized the results of his work within a broad framework, with comparative data on other Indigenous societies in the Southeast and elsewhere in North America. During the same period, he produced several papers on Seminole history and culture (Sturtevant 1953, 1954, 1955, 1956a, 1956b, 1956c), as well as an article on the Seneca of the Allegany Reservation in western New York State, which he coauthored with fellow graduate student Harold Conklin and was based on research they had conducted in 1951 (Conklin and Sturtevant 1953). In 1954, he was hired on a two-year contract as an assistant curator of anthropology in the

(W.C. Sturtevant Papers, Boxes 484 and 485)

Yale Peabody Museum of Natural History and as an instructor in Yale's Department of Anthropology.

The Bureau of American Ethnology, 1956–1965

Because Yale decided not to renew his contract, Sturtevant applied for permanent employment elsewhere and was offered and accepted a position as an ethnologist at the Smithsonian's Bureau of American Ethnology (BAE) starting in March 1956 (Stirling 1957:22). He was excited by the prospect of working at the BAE because of its long tradition of research on the Indigenous peoples of the New World and its extensive archival and library collections on the subject (Hinsley 1994; Sturtevant 1968c; see "Antecedents of the Smithsonian *Handbook Project*," this vol.). The BAE resources were complemented by those of the Department of Anthropology, the division of the U.S. National Museum responsible for the Smithsonian ethnographic, archaeological, and physical anthropology collections from around the world.

While completing his undergraduate and graduate studies, Sturtevant had developed a perspective on anthropology that guided his research and other professional activities over the course of his career. A fundamental element of this perspective was his view that cultures and societies are historical formations that must be understood both as the product of the complex interaction through time of diverse factors, from socioeconomic and political to environmental, and as components of more encompassing regional and supraregional sociocultural systems. This perspective required combining the largely synchronic data collected through ethnographic research with the diachronic data generated by historical and archaeological research. In this synthesis, the ethnographic data contributed to the interpretation of the historical and archaeological record while the historical and archaeological data provided insights into the antecedents and evolution of the cultural and social phenomena documented ethnographically.

Sturtevant applied this perspective in his research first by focusing on the cultural history of the Indigenous cultures and societies of eastern North America. After joining the BAE, he completed studies of the interaction among Indigenous societies of the Southeast and the Antilles and an overview of the history and intercultural dynamics of Spanish–Indian relations in the region (Sturtevant 1960c, 1962b). He also began incorporating into his analyses cultural data from historical drawings, paintings, engravings, and photographs of North American Indigenous people produced between

the sixteenth and nineteenth centuries (Sturtevant 1962a, 1964a, 1965a, 1965b) (fig. 3). He considered such illustrations and items of material culture in museum collections of great value for the investigation of the cultural history of Native North America because they included data on cultural practices that had disappeared and were not reported in the written record (Sturtevant 1965a:272, 1967d:1–5, 1973c).

Although Sturtevant's specialty was the cultural history of eastern North America, his interests encompassed all of Native North America. He devoted considerable time to expanding his knowledge of Indigenous cultures and societies across the continent by exploring the existing literature and by keeping up to date on new studies. He maintained extensive bibliographic files on a wide variety of topics, some of which he compiled into bibliographies that were made available for general distribution in the form of *Smithsonian Information Leaflets*. Between 1957 and 1962, he prepared bibliographies on American Indian basketry, clothing, languages and language families, medicine and health, songs and dances, and wars and warfare, as well as on maps related to American Indians and the contemporary situation of Indians across the United States and Canada (Merrill 2002b:37–39).

National Anthropological Archives, Smithsonian Institution.

Fig. 3. William Sturtevant studying George Catlin's American Indian paintings at the Smithsonian American Art Museum. (W.C. Sturtevant Papers, Box 485)

In addition to contributing to a better understanding of the Indigenous cultures and societies of North America, Sturtevant was committed to furthering the development of anthropology as an intellectual endeavor and scholarly discipline. He produced a brief but comprehensive overview of the field for nonspecialists and wrote two influential essays on the theory and methodology of ethnographic research and the relationship between anthropology and history (Sturtevant 1957, 1964d, 1966a; Merrill 2002a:17–18). In these essays, he emphasized the importance of incorporating the perspectives on their histories and cultures of the members of the societies at the focus of anthropological investigations. Although he advocated this position for theoretical rather than political reasons, it was consistent with his view that anthropologists should support the efforts of Indigenous communities to resist the detrimental impact of domination by the larger societies of which they formed a part (Merrill 2002a:17–18).

Because the BAE's research staff had no curatorial or teaching responsibilities, its members were able to spend considerable amounts of time conducting fieldwork, an opportunity of which Sturtevant took full advantage (Merrill 2002a:17–22; see also Collins 1965; Roberts 1959, 1960, 1961, 1962, 1963, 1964; Stirling 1957, 1958). Between 1956 and 1962, he conducted fieldwork among the Seminole in south Florida (fig. 2, right), the Seneca in western New York (fig. 2, left), and the Seneca-Cayuga in northeastern Oklahoma, and he interviewed the last known speaker of the Catawba language in South Carolina. He also briefly visited several other Indian communities, including the Delaware in Oklahoma, the Choctaw in Mississippi, and the Eastern Cherokee in North Carolina. He complemented his ethnographic and linguistic research with extensive work on cultural history and material culture collections in museums, archives, and libraries in the United States, Canada, and Europe.

Sturtevant was also involved in a number of professional organizations, including the American Anthropological Association, the American Indian Ethnohistoric Conference (after 1966, the American Society for Ethnohistory), the Anthropological Society of Washington, the Central States Anthropological Society, the Conference on Iroquois Research, the Florida Anthropological Society, the International Congress of Anthropological and Ethnological Sciences, the International Congress of Americanists, the Society for American Archaeology, and the Southern Historical Association. The recognition, early in his career, of Sturtevant as a major North Americanist scholar, as well as a congenial colleague, was based to a considerable degree on his regular and enthusiastic partici-

pation in these organizations' conferences and other activities.

In 1963, Sturtevant received a grant from the National Science Foundation to conduct a research project on traditional clothing in Burma (Myanmar). He chose Burma for this study primarily because his wife, Theda Maw, was Burmese and had not visited her family since 1955. The Sturtevant family, which now included three children, spent a full year in Burma, from the fall of 1963 to the fall of 1964 (Merrill 2002a:21; Stewart 1965:40). During his fieldwork, Sturtevant was informed that plans were underway to merge the BAE and the Department of Anthropology of the U.S. National Museum (the future National Museum of Natural History) initiated by S. Dillon Ripley, the new secretary of the Smithsonian (see "The Beginnings, 1965–1971," this vol.). Sturtevant attempted through correspondence to convince Ripley that the BAE should remain independent with an expanded global focus but to no avail (Merrill 2002b; Sturtevant 1964b, 1964c; Ripley 1965c:13).

The Smithsonian Office of Anthropology, 1965–1968

At time of its official merger with the BAE in 1965, the Department of Anthropology was organized into three curatorial and research divisions: archaeology, ethnology, and physical anthropology. When the combined Smithsonian Office of Anthropology (SOA) was created (see "The Beginnings, 1965–1971," this vol.), the physical anthropology division was retained while the archaeology and ethnology divisions merged into a combined division of cultural anthropology (Smithsonian Institution 1965:431–432). It was subsequently subdivided into three divisions: North America, South America, and Old World (Smithsonian Institution 1966:398–399, 1967b:502). Sturtevant formed part of the staff of SOA's cultural anthropology and North American divisions, and he became the sole curator of the North American ethnology collections. John C. Ewers, the other SOA North American ethnologist, was designated as a senior scientist in 1965 (Cowan 1966:78; Ewers 1955b, 1956, 1959; Fenton 1982:15; Walker 2008, 2013:57–59) and was relieved of most curatorial duties, though Sturtevant frequently consulted with him on the Plains collections, Ewers' principal area of expertise.

Despite Sturtevant's opposition to the merger, he enthusiastically embraced his new curatorial role. He had long regarded museums and their collections as fundamental to the anthropological enterprise. Soon after the merger, he prepared a definitive "Guide to

Field Collecting of Ethnographic Specimens” and an essay on the potential contributions of museum collections to anthropological research (Sturtevant 1967d, 1969b; cf. Sturtevant 1966b). He also served on the American Anthropological Association’s Committee on Anthropological Research in Museums, which became, in 1974, the Council for Museum Anthropology (Freed et al. 1977).

Sturtevant’s Selection as General Editor of the *Handbook*

Sturtevant took an active part in the early discussions about the format and structure of the proposed *Handbook of North American Indians* that SOA staff held in January–April 1966 (see “The Beginnings, 1965–1971,” this vol.). He also was involved in developing program activities for the SOA. These included co-organizing with Sol Tax a joint Smithsonian–Wenner-Gren conference on Changing Cultures (April 1966), which aimed to develop a global program in “urgent anthropology” (Sturtevant 1967g).

The planning of the *Handbook* entered a new stage when, in a meeting held in May 1966, the SOA research staff unanimously approved the nomination of Sturtevant as its general editor (SOA 1966c:6; see “The Beginnings, 1965–1971,” this vol.). Sturtevant accepted the appointment without hesitation. He was convinced that a comprehensive, scholarly overview of Native Americans accessible to a broad audience was sorely needed, especially given the major advances in knowledge and changes in Native societies that had taken place since the publication of the original BAE *Handbook of American Indians North of Mexico* (Hodge 1907–1910). He was also concerned that his inclination to focus his research on disparate and often highly specific topics would preclude his ever producing a major synthesis of North American ethnology. Organizing the new *Handbook* would offer an opportunity to make a major contribution to the field while significantly enhancing an understanding of Native North America (Merrill 2002a:22; Sturtevant 1967e:1).

At the time of his appointment as general editor, the SOA research staff included five other North Americanists: ethnologist John C. Ewers; physical anthropologist T. Dale Stewart; and archaeologists Henry B. Collins, Waldo R. Wedel, and Richard B. Woodbury. All were highly regarded scholars, but their interests and expertise were more regionally focused than those of Sturtevant (cf. W.W. Fitzhugh 2016b:168; Gradwohl 1996; Ortner 1998; Siebelt 1998; Smithsonian Institution 1966:398; Thompson et al. 2010). They

in age from 49 to 67, significantly older than Sturtevant, who was 39 years old at the time. None of them was interested in taking on the general editorship of the *Handbook*, but all were willing to collaborate with Sturtevant in developing the project.

Two weeks after being named the *Handbook*’s general editor, Sturtevant traveled to New Orleans to meet with Robert Wauchope, general editor of the *Handbook of Middle American Indians*, a similar cultural encyclopedia then being produced at Tulane University and slated for publication by the University of Texas Press (Sturtevant 1966d). He next visited with Gordon Willey, professor of archaeology at Harvard University, who was editor of two volumes in the *Handbook of Middle American Indians* series and had served as assistant editor of the earlier *Handbook of South American Indians*, published by the BAE in the 1940s and 1950s (Sabloff 2004:406; Steward 1946–1959; Willey 1966a, 1966b). The purpose of these meetings was “to learn of some of the mistakes as well as discoveries in the editorial and planning practices of previous handbooks” (Sturtevant 1967e:4).

It is most likely that Sturtevant developed a general concept of the series during the summer and fall of 1966 based on consultation with the other SOA North Americanists and a review of the 240 responses to a questionnaire on the *Handbook* distributed by Clifford Evans (1966b) that Sturtevant characterized as providing “many excellent suggestions as to its format and content” (Sturtevant 1966g, 1967e:2; see “The Beginnings, 1965–1971,” this vol.). He was also finalizing maps of the “Early Indian Tribes, Culture Areas, and Linguistic Stocks” of the United States, which were published in 1967 (Sturtevant 1967c). The culture areas he defined in these maps correspond in most respects to those adopted for use in the *Handbook* volumes.

The planning of the *Handbook* accelerated in the fall of 1966, following the hiring of Samuel L. Stanley, an associate professor of anthropology at California State College, Los Angeles, and former PhD student of Sol Tax at the University of Chicago, to serve as project coordinator of the new SOA initiatives (Cowan 1967:78; see “The Beginnings, 1965–1971,” this vol.). When Stanley joined the SOA staff, his principal responsibility was to assist Sturtevant in planning the *Handbook*. The two also shared an interest in the status of contemporary Indian communities across North America (Stanley 1958; Stanley et al. 1959), and they soon coauthored a study of these communities in the eastern United States (Sturtevant and Stanley 1968).

Sturtevant and Stanley devoted the fall of 1966 and the first half of 1967 to completing a variety of tasks directed toward producing an initial outline of the *Handbook*’s coverage and organization, identifying

approximately 1,000 active North Americanist scholars who could potentially contribute to the series and estimating the personnel and funding required to move forward (Sturtevant 1967a, 1967e). Because the new *Handbook* was intended to replace the BAE *Handbook* of 1907–1910, an analysis of the earlier *Handbook* was a high priority. SOA clerical staff and assistants under Stanley's supervision created a file on index cards of the reportedly 12,800 entries of the original *Handbook* and categorized them by subject matter.

An announcement of the *Handbook* project was prepared by November 1966, mailed to specialists, and distributed at the meetings of seven anthropological societies. It provided a brief overview of the project, introduced the editorial board and the series editor, and invited respondents to offer comments, indicate their willingness to participate, and suggest other potential contributors (Sturtevant 1966e; see "The Beginnings, 1965–1971," this vol.).

While the planning of the *Handbook* was underway, Sturtevant received a Fulbright Scholar award and spent a year, from July 1967 through July 1968, in England as a lecturer at the University of Oxford's Institute of Social Anthropology (now the Institute of Social and Cultural Anthropology). After his appointment in Oxford, he traveled to Germany to attend the International Congress of Americanists and then to Kashmir to collect data on artificial island agriculture; he continued on to Japan to present a paper at the Eighth International Congress of Anthropological and Ethnological Sciences in Tokyo and Kyoto in September 1968 (Cowan 1969:72; Sturtevant 1970a). During this congress, he participated in a meeting of the Working Group on Urgent Anthropology, chaired by Tax (Reining 1969).

During Sturtevant's absence, the *Handbook* project was transferred from SOA to the newly created unit, the Center for the Study of Man (CSM), established as a separate bureau by Smithsonian secretary S. Dillon Ripley in 1968, with Sol Tax as its acting director and Sam Stanley as its program coordinator (Smithsonian Institution 1969a, 1969b:693; Tax 1968b, 1969:313; see "The Beginnings, 1965–1971," this vol.). Stanley now devoted much of his time to building programs and infrastructure for the new center, and his participation in the day-to-day activities for the *Handbook* ceased almost entirely. While Sturtevant continued to direct the *Handbook* project, he was also involved in planning the future of the CSM as a member of its advisory board.

Planning the *Handbook*, 1968–1971

Between the fall of 1968 and the spring of 1970, Sturtevant focused on working out the conceptual outline

for the *Handbook* and expanding the directory of North Americanist scholars; by March 1969, it included around 2,000 specialists (Anonymous 1969; Sturtevant 1969c; U.S. Congress 1969:808–809). In consultation with the members of the *Handbook* editorial board and following the example of the *Handbook of Middle American Indians* (Wauchope 1964–1976), he decided to seek editors for individual series volumes to coordinate the detailed planning of their contents and the collection of the future chapter manuscripts.

Implementation of this strategy got underway in 1970, when the U.S. Congress approved funding for the *Handbook* project to become available in the summer of 1970 (Sturtevant 1971f:5). Sturtevant had originally submitted a request for \$120,000 and seven positions to staff the *Handbook*'s editorial office, but this request had been reduced in the budget planning process to \$45,000 and three positions (see "The Beginnings, 1965–1971," this vol.; U.S. Congress 1970:3496). Sturtevant described it as "barely adequate to begin work" (Sturtevant 1970d:3), but it was sufficient to begin organizing planning meetings for the individual volumes and the entire series.

A week after the Congress approved the *Handbook* funding in March 1970, Sturtevant presented a detailed blueprint for its production to Sidney R. Galler, Smithsonian assistant secretary for science (Sturtevant 1970b:1–3). He outlined the following steps: prepare detailed outlines for the series, solicit editors for individual volumes, convene a general planning session of volume editors and other specialists in the late spring or early summer of 1970, organize planning meetings for individual volumes to identify chapters and chapter authors, and send invitations to authors by September 1, 1970.

The first reference to individual volume editors appeared in the same memo, which alluded to the need to select volume editors "in consultation with a volume planning committee, called together by the volume editor." Sturtevant listed six people as prospective volume editors (besides himself): historian Wilcomb Washburn (for *General History*), ethnologists Alfonso Ortiz (*Southwest*) and John Ewers (*Plains* and *Biographical Dictionary*), archaeologists Bruce Trigger (*Northeast*) and Charles Fairbanks (*Southeast*), and linguist Ives Goddard (*Languages*). Of these, Washburn, Ortiz, Trigger, and Goddard agreed to undertake the task, and all led their respective volumes to completion.

The *Handbook* Editorial Conference, the first of the meetings to address practical issues related to producing the *Handbook*, was held at the Smithsonian in June 1970. The participants, including Sturtevant, Tax, Ewers, Stanley, Woodbury, and a few prospective volume editors, discussed a variety of topics, ranging

from the intended audience for the *Handbook* and the role of volume editors to the contents of individual volumes and various facets of the editorial and publishing process (Anonymous 1970). The group reviewed the outlines for all planned volumes, which at that point totaled 16. It also discussed payments to future authors (\$0.02 per word) and volume editors (\$4,500), division of labor, printing, and the size and format of the volumes.

The participants also invested substantial time in identifying additional volume editors. During the summer of 1970, Sturtevant approached several of the candidates, and David Damas (*Arctic*, vol. 5), June Helm (*Subarctic*, vol. 6), and Deward Walker (*Plateau*, vol. 12) agreed to serve (Stanley 1970a:1). Sturtevant assumed responsibility as the editor of two volumes, *Introduction* (vol. 1) and *Southeast* (vol. 14). The conclusions reached at the first planning conference were for the most part tentative, but they provided a foundation for moving forward with detailed planning that took place in a series of follow-up meetings between the fall of 1970 and early summer of 1971 (see "The *Handbook*: A Retrospective," this vol.).

In anticipation of these meetings, a General Advisory Board for the *Handbook* was created, comprising five major figures in North Americanist studies: Fred Eggan (b. 1906, d. 1991), a social anthropologist at the University of Chicago; Mary R. Haas (b. 1910, d. 1996), a linguist at the University of California, Berkeley; D'Arcy McNickle (b. 1904, d. 1977), an anthropologist and historian emeritus at the University of Saskatchewan, Regina, and one of the founders of the National Congress of American Indians in 1944; T. Dale Stewart (b. 1901, d. 1997), a physical anthropologist in the Smithsonian's Department of Anthropology; and Gordon R. Willey (b. 1913, d. 2002), an archaeologist at Harvard University. Sturtevant (1970d) noted that the board represented "a good diversity of specialties" and included one woman (Haas) and one Native scholar (McNickle).

As a group, the board (also referred to as the General Advisory Panel; Sturtevant 1970d:1), brought to the *Handbook* planning process expertise in most of the disciplinary and many of the subdisciplinary perspectives, as well as a comprehensive knowledge of the state of North Americanist scholarship at the time. In addition, McNickle, a member of the Salish-Kootenai tribe, was among the earliest activists in the American Indian rights movement of the 1960s (Niermann 2006; Parker 1992). He was well informed on contemporary Native American issues and provided connections to Native American civil rights activists and cultural leaders. Stewart and Willey had ex-

perience with other multivolume endeavors, as both served as volume editors for the *Handbook of Middle American Indians* and contributed to the *Handbook of South American Indians* (Marcus and Spores 1978:86; Sabloff 2004:406; Steward 1949:xxiv, 1950:xii).

The *Handbook* General Advisory Board was convened in Chicago in November 1970. In addition to the five members of the board and Sturtevant, meeting participants included six newly appointed volume editors (Damas, Goddard, Helm, Ortiz, Trigger, and Washburn), as well as Tax and Stanley as representatives of the CSM (Sturtevant 1970d; Stanley 1970b). The group proposed changes to the draft organization and contents of the series and recommended the addition of a new volume on contemporary American Indian affairs (vol. 2), for which McNickle volunteered to be the editor. During the meeting, Raymond Fogelson was invited to edit the *Southeast* volume to allow Sturtevant to concentrate on other tasks. Five more volume editors were recommended: Warren d'Azevedo (combined *Basin-Plateau* volume, later divided into two volumes, with d'Azevedo editing *Great Basin*), William Bittle (*Plains*), Robert Heizer (*California*), Frederick Hulse (*Environment and Population*, retitled *Environment, Origins, and Population*), and Wayne Suttles (*Northwest Coast*); all eventually accepted (Sturtevant 1970d:1–2).

By the winter of 1971, Sturtevant had volunteered to edit yet another volume, *Index* (to become vol. 20, a general index to the entire series). Thus, editors had been appointed for all the *Handbook* volumes, planning committees for seven volumes had been created, meetings to develop detailed plans for three volumes had been held, and other planning meetings had been scheduled. Between the fall of 1970 and the early summer of 1971, meetings of the planning committees for 15 volumes (out of 20) had taken place in different parts of the United States and Canada (see table 1).

The response of the North Americanist scholarly community to the *Handbook* project was impressive, as Sturtevant noted in a progress report to Secretary Ripley and other members of the Smithsonian administration:

It is evidence of the general enthusiasm for this project, of its importance, and, I think, of confidence in the Smithsonian and in the present editorial plans, that of all the many busy individuals asked to help as members of the advisory panel, as volume editors, and as members of planning committees for the individual volumes, so far all but one have accepted. . . . I have never been associated with an editorial scheme or a meeting or series of meetings which had anything approaching this proportion of acceptances (Sturtevant 1970d:2).

Table 1. *Handbook* Volume Planning Meetings, 1970–1971

<i>Volume title</i>	<i>Date</i>	<i>Location</i>
<i>Subarctic</i>	October 16–18, 1970 (1st)	Iowa City, Iowa
<i>Languages</i>	November 8, 1970	Chicago, Illinois
<i>Northeast</i>	November 13–14, 1970	Montreal, Quebec
<i>History of Indian–White Relations</i>	December 31, 1970	Cambridge, Massachusetts
<i>Southeast</i>	January 4, 1971	Washington, D.C.
<i>Southwest</i> (both volumes)	January 7–9, 1971	Santa Fe, New Mexico
<i>Arctic</i>	January 15–16, 1971	Hamilton, Ontario
<i>Indians in Contemporary Society</i>	February 18–22, 1971	Albuquerque, New Mexico
<i>Northwest Coast</i>	February 27–28, 1971	Portland, Oregon
<i>California</i>	March 5–6, 1971	Berkeley, California
<i>Subarctic</i>	March 17–21, 1971 (2nd)	Ottawa, Ontario
<i>Great Basin and Plateau</i>	March 19–20, 1971	Reno, Nevada
<i>Plains</i>	March 21–23, 1971	Norman, Oklahoma
<i>Environment, Origins, and Population</i>	May 2–3, 1971	Tucson, Arizona
<i>Indians in Contemporary Society</i>	June 25–28, 1971	Albuquerque, New Mexico

Eventually, more than one hundred committee members were involved in planning the *Handbook*, some nominally, but many quite actively (for details on the planning of each *Handbook* volume, see “The *Handbook*: A Retrospective,” this vol.).

After its November 1970 meeting, the General Advisory Board did not participate as a group in the *Handbook* planning process, but its members continued to provide advice individually and, except for Willey, contributed to the completion of several of the *Handbook* volumes. Until his death in 1977, McNickle was on the planning committee of *History of Indian–White Relations* (vol. 4; Washburn 1988a:v) and served as editor of the volume on contemporary Indian affairs (vol. 2; Bailey 2008a:xi). Eggan was a member of the planning committees for the two *Southwest* volumes and the sole or senior author of three chapters in these volumes and one chapter in the *Plains* volume (Eggan 1979, 1983; Eggan and Maxwell 2001; Eggan and Pandey 1979). Haas and Stewart served on the planning committees of *Languages* and *Environment, Origins, and Population*, respectively, and prepared five biographies of non-Indian scholars for the volume *History of Indian–White Relations* (Haas 1988a, 1988b, 1988c; Stewart 1988a, 1988b).

In the volume planning meetings, the committees developed tables of contents for individual volumes, determined the topics to be covered and the lengths of the chapters to be included, and identified potential chapter authors, to whom formal invitations were sent during 1971 (Sturtevant 1971f:6; Sturtevant and Goddard 1996:xi). Such committees usually comprised six

to nine people, always including Sturtevant and, later, Ives Goddard, the series linguistic editor (fig. 4).

During the same period, some changes in the volumes to be edited by Sturtevant himself took place. One of these volumes, *General Culture* (originally titled *Comparative Ethnology*), was intended to provide cross-cultural continental perspectives on Native American cultures and societies. By the spring of 1971, it was dropped and its content incorporated into the projected introductory volume. In addition, a new volume, *Technology and Visual Arts* was added, with Sturtevant identified as its editor (Sturtevant 1971a, 1971b).

Over the course of a year, from June 1970 to June 1971, the general organization of the *Handbook* series was finalized and detailed outlines of the contents of 15 volumes were produced. The five remaining volumes were to be edited by Sturtevant himself: *Introduction* (vol. 1), *Technology and Visual Arts* (vol. 16), the two-volume *Biographical Dictionary* (vols. 18, 19), and the *Index* (vol. 20). The decision had also been made to attempt to publish all of the volumes by the bicentennial date in July 1976 (and, preferably, by June 25, 1976, the centennial of the death of George Armstrong Custer at the Battle of Little Big Horn; Sturtevant 1969c, 1971f). Sturtevant realized, however, that this deadline might be unrealistic.

The project is so big that several years must be allowed for the process of editing and printing. Authors of most articles are already at work, writing for deadlines in the spring of 1972. Most volumes should appear in 1976, but several may be delayed because their planning is more complex or

because it depends in part on completion of some other volumes (Sturtevant 1971f:6).

During 1970 and 1971, the planning of the *Handbook* occupied most of Sturtevant's time. He participated in all of the volume planning meetings except those for *Languages* (1970) and *Subarctic* (1971) (table 1). He collaborated with the volume editors in refining the outlines for their volumes and identifying and inviting potential contributors, engaging in extensive correspondence with them as well as with the members of the General Advisory Board. Stanley (1971a:2) estimated that Sturtevant wrote about 700 personal letters to these individuals, in addition to sending a form letter to approximately 2,000 people, mostly Native, requesting suggestions of Native individuals to be considered for inclusion in the *Biographical Dictionary*. He also produced a comprehensive set of guidelines for contributors to the *Handbook* and publicized the project at professional meetings, through brief announcements, and in a more detailed description that he prepared for publication (Sturtevant 1971d, 1971f).

The amount of time Sturtevant was devoting to the *Handbook* raised the ire of his supervisors in the Department of Anthropology and the National Museum of Natural History (NMNH). In the fall of 1970, as intensive planning for the *Handbook* was getting underway, Clifford Evans, chairman of the Department of Anthropology, complained to Sidney Galler, assistant secretary for science, that Sturtevant was devoting all his time to the *Handbook* even

though his salary was paid by the department and that he engaged in travel and other *Handbook*-related activities without securing his approval or even informing him (Evans 1970). His perspective was shared by NMNH director, Richard Cowan, who requested that Galler approve the permanent transfer of Sturtevant from the Department of Anthropology to the CSM for full-time work on the *Handbook* (Cowan 1970). Sturtevant was clearly aware of these complaints and responded indirectly to them in a memo to Secretary Ripley (Sturtevant 1970d:3–4), in which he indicated his commitment to fulfilling his curatorial duties and contributing to the planning of the prospective new Museum of Man while serving as general editor of the *Handbook*. The requested transfer was not approved.

Editing the *Handbook*, 1972–1983

While planning the series volumes, Sturtevant began assembling an editorial staff in office space assigned to the *Handbook* office in the Natural History building (see “Production of the *Handbook*, 1970–2008,” this vol.). By the fall of 1970, the staff included an illustrations researcher, an editorial assistant, and a secretary; in 1972, a bibliographer, a scientific illustrator, a manuscript and copy editor, and a research assistant were hired (Sturtevant 1970d:3; Sturtevant and Heizer 1978:xv). During the same period, Sturtevant initiated detailed planning for two of the five volumes for which he served as the editor, *Introduction*

and *Technology and Visual Arts*, organizing planning meetings for them in Washington in March and July 1972, respectively (Sturtevant 1972a, 1972b, 1972c, 1972d; see “Introduction: A Gateway to the *Handbook* Series,” this vol.).

In December 1970, while the volume planning meetings were underway, Sturtevant reported to Secretary Ripley, “Our timetable has a target date of May 1, 1976, for simultaneous publication of the entire encyclopedia” (Sturtevant 1970d:2). In fact, he first informed the Smithsonian administration of this target date in March 1970, before detailed planning for the series had begun. At the outset of this process, Sturtevant had anticipated that authors would need about a year to prepare their contributions and that the processing and publication of the chapter manuscripts would require about five years from the time of their receipt (Sturtevant 1970b:3).

By 1973, it was clear that this time frame was insufficient. Authors of chapters in the 15 volumes planned in 1970–1971 had begun submitting their manuscripts in late 1971, but the vast majority of contributors failed to meet the 1972 deadline. By January 1973, the Handbook office had received the initial manuscript versions of only about a third of the 869 chapters planned for these volumes, and the percentage of manuscripts received for each volume varied widely, from more than 50 percent to fewer than 10 percent per volume (table 2). With two-thirds of the manuscripts still lacking, the time available for completing the steps from receipt to publication had been reduced to three and a half years. This delay in the submission of manuscripts

jeopardized the possibility of publishing most or all of the *Handbook* series volumes by 1976.

It is unclear why Sturtevant decided, before any manuscripts had been submitted, to predict a publication date for the 20-volume series and why he assumed that a project of that magnitude and complexity could be completed in such a short period of time. The mystery is compounded by the fact that, in planning his *Handbook*, he was aware of the production history of the *Handbook of Middle American Indians* (Marcus and Spores 1978:85) that began in 1956. By 1970, 14 years after the project’s inception, only 9 of its anticipated 16 volumes had been published. If the production rate of the *Handbook* turned out to be comparable to that of the Middle American series, no more than four of the North American *Handbook* volumes would have been produced by 1976. The actual outcome was none.

There is no evidence that Smithsonian administrators pressured Sturtevant in 1970 or earlier to establish a firm date for the completion of the project or questioned his conclusion that 1976 was a viable target date. To the contrary, the administration fully embraced this date because it coincided with the celebration of the bicentennial of the American Revolution, a potential source of federal funding for the *Handbook* project (see “The Beginnings, 1965–1971,” this vol.). The Smithsonian’s budget request to the U.S. Congress for fiscal year 1971 explicitly linked the *Handbook* to the bicentennial celebration, and in 1972, the *Handbook* was designated as one of four “scholarly projects” of the Smithsonian’s bicentennial program (Smithsonian Institution 1972a:28–35; U.S. Congress 1971b:608).

Table 2. Manuscripts Received by January 23, 1973

<i>Volume number</i>	<i>Volume title</i>	<i>Number of chapters planned</i>	<i>Number of manuscripts received</i>	<i>Percent received</i>
2	<i>Indians in Contemporary Society</i>	64	5	7.8
3	<i>Environment, Origins, and Population</i>	66	17	25.8
4	<i>History of Indian–White Relations</i>	66	27	40.9
5	<i>Arctic</i>	65	15	23.1
6	<i>Subarctic</i>	66	22	33.3
7	<i>Northwest Coast</i>	65	10	15.4
8	<i>California</i>	69	34	49.3
9, 10	<i>Southwest</i> (both volumes)	111	44	39.6
11	<i>Great Basin</i>	40	21	52.5
12	<i>Plateau</i>	45	6	13.3
13	<i>Plains</i>	55	15	27.3
14	<i>Southeast</i>	59	17	28.8
15	<i>Northeast</i>	70	38	54.3
17	<i>Languages</i>	28	5	17.9
Totals		869	276	31.8

By 1975, the Smithsonian administration realized that the goal of publishing the entire *Handbook* series in 1976 could not be achieved (see “Production of the *Handbook*, 1970–2008,” this vol.). An audit of the project identified the amount of time that Sturtevant and the volume editors were devoting to reviewing chapter manuscripts and authors to revising them as major factors contributing to the delays in the progress of the project (Peratino 1975:3). Sturtevant’s approach to reviewing manuscripts was time consuming. He focused on ensuring that each manuscript conformed to the highest standards of scholarship and that its coverage and bibliographic citations were comprehensive. He often personally checked the accuracy of information presented in the manuscripts and provided authors with data to fill gaps as well as suggestions for stylistic improvements. He consulted extensively with the volume editors on all manuscript revisions. The time he invested in reviewing manuscripts in volumes for which others served as editors also prevented Sturtevant from developing the volumes for which he was responsible.

The 1975 audit also concluded that the *Handbook* project, as a whole, was in disarray due primarily to poor management (Peratino 1975), and the following year, David Challinor, Smithsonian assistant secretary for science, concluded that closer administrative oversight of the *Handbook* project was required. He transferred control of the CSM and responsibility for its projects, including the *Handbook*, to the NMNH and its director, paleontologist Porter Kier (Della-Loggia 1976; Smithsonian Institution 1977:314). Kier, in turn, placed James F. Mello, NMNH assistant director, in charge of the overall management of the *Handbook* (Della-Loggia 1976; see “Production of the *Handbook*, 1970–2008,” this vol.). These changes allowed Sturtevant to focus on providing the intellectual guidance and leadership to ensure that the *Handbook* would be a major contribution to North Americanist scholarship.

The reorganization of the *Handbook*’s management coincided almost exactly with the original target date of June 25, 1976, for the release of the entire series. Although no volumes had been published by this date, the production of one volume, *California* (Heizer 1978b), had advanced to the point that all of its chapters were ready to be typeset. Published in April 1978, the volume was received favorably by the scholarly community, with several laudatory reviews (see “Production of the *Handbook*, 1970–2008,” “California,” and “Organization and Operation,” this vol.).

By the summer of 1978, a second volume, *North-east* (Trigger 1978a), was being typeset, the first of two volumes on the Southwest (vol. 9, Ortiz 1979) was nearing completion, and intensive work on another volume, *Subarctic* (Helm 1981), was underway. In

the case of each volume, Sturtevant reviewed all versions of the chapter manuscripts and worked closely with the editorial staff and volume editors in finalizing chapters for publication. Once the chapters were typeset, he checked the proofs, noted corrections, and repeated the process when the chapters were assembled into volumes.

By the end of 1981, only 4 of the planned 20 volumes in the *Handbook* series had been published. The slow pace of progress led Mello, the *Handbook*’s project manager, to seek to accelerate the production of the remaining volumes by hiring a full-time managing editor to manage the *Handbook* and to assist Sturtevant in his duties as general editor (Mello 1981b). In the fall of 1982, Colin Busby, an archaeologist specializing in western North America, joined the *Handbook* staff as the series’ full-time managing editor (Della-Loggia 1982; see “Production of the *Handbook*, 1970–2008,” this vol.).

Busby’s efforts to fulfill this responsibility were unsuccessful, in part because he concluded that the *Handbook*’s publication rate could not be increased unless quality standards were lowered and Sturtevant invested more of his time in the *Handbook*. Busby’s views on how the production of the *Handbook* should move forward were diametrically opposed to those of Sturtevant (Busby 1983a, 1983b). The latter firmly believed that quality should not be sacrificed for speed of production and had concluded that he could not devote any more time to the *Handbook* than he already was (Sturtevant 1983a, 1983b). In fact, in the spring of 1983, he made it known that by the fall of that year, he intended to reduce his involvement in the *Handbook* (Busby 1983b; Fiske 1983; Mello 1983a).

A combination of factors presumably motivated Sturtevant to reach this decision. He was clearly unhappy with the changes in *Handbook* management that had taken place (Sturtevant 1983a), and he was concerned by the impact that his work on the *Handbook* was having on his ability to pursue his other professional activities. When Sturtevant agreed in 1966 to direct the *Handbook*, he had expected that the project would be completed within a decade or so. Given the slow pace of the publication, he was confronted by the possibility that the remainder of his professional career would be limited to serving as its general editor, an outcome he was reluctant to accept. At the *Handbook* volume editors’ meeting in the summer of 1983, he proposed that a new general editor be hired to replace him and suggested Raymond DeMallie for this position (see “Production of the *Handbook*, 1970–2008,” this vol.), but no such change took place. The only significant developments that occurred as a result of this crisis were Busby’s resignation and the transfer of

oversight of the *Handbook* to the chair of the NMNH Department of Anthropology (Fiske 1983:2; Smithsonian Institution 1985:569).

Editing the *Handbook*, 1984–1990

Five *Handbook* volumes were published between 1978 and 1983, and four additional volumes were released between 1984 and 1990 (table 3). Yet, by the mid-1980s, many of the chapter manuscripts that had been prepared in the 1970s required updating, resulting in an additional round of revisions by authors and reviews by the volume editors and Sturtevant. In some cases, the original authors were unwilling or unable to update the manuscripts themselves, and the *Handbook* team had to identify new authors or coauthors, as well as replacement authors for chapters that had never been submitted. As time went on, the volume outlines prepared in 1970 and 1971 became inadequate or obsolete, and revised plans were prepared for the eight volumes to be published between 1988 and 2008. Sturtevant collaborated with the volume editors and members of the planning committees in making all of these modifications.

In 1986–1987, Sturtevant spent a year at the University of Oxford as the Smithsonian Fellow of its Worcester College. During this period, Ives Goddard, the *Handbook*'s linguistic editor, took on many of Sturtevant's duties, in effect becoming co-general editor of the series, although he was never officially recognized as such. He continued in this role after

Sturtevant returned from England in 1987 and also served as the *Handbook*'s managing editor from 1985 until 1989, when a full-time managing editor, Karla Billups, was hired (Sturtevant and Suttles 1990:xv; see "Production of the *Handbook*, 1970–2008," this vol.). At that point, Goddard became the *Handbook*'s technical editor, a title he created to reflect his work not related to his tasks as the series' linguistic editor (Goddard, personal communication, April 15, 2017).

In addition to his work as the *Handbook*'s general editor, Sturtevant was curator of the North American ethnology collections of the Department of Anthropology (fig. 5), a responsibility that he and I shared after I was hired in 1980 to fill the North American ethnologist position vacated by John C. Ewers, who retired in 1979 (Smithsonian Institution 1980:562). Apart from our standard curatorial duties, we began to address a variety of issues related to the repatriation of museum collections to Native American communities. In 1981, the Department of Anthropology received its first repatriation request, from the Pueblo of Zuni, New Mexico (Merrill et al. 1993; Merrill and Ahlborn 1997). A decade earlier, Sturtevant and the other four members of the American Anthropological Association's Committee on Anthropological Research in Museums had opposed the repatriation of five wampum belts housed in the New York State Museum to the Onondaga; their position had been severely criticized by other anthropologists and Native American activists (Henry 1970; R.W. Hill 2001; Matthews and Jordan 2011; Sturtevant et al. 1970). Sturtevant believed, however, that each repatriation request should be

evaluated on a case-by-case basis, and he supported approving the Zuni request and several subsequent repatriation requests.

Between 1981 and 1988, Sturtevant made several trips to Russia (then the Soviet Union) as a member of the planning team for the Smithsonian exhibit *Cross-*

roads of Continents, which brought together objects featuring Indigenous cultures of Siberia, Alaska, and the Northwest Coast from U.S., Canadian, and Russian museums (Fitzhugh and Crowell 1988) (fig. 6). Also in the late 1980s, he was involved in planning two new permanent exhibit halls on Native American

cultures at NMNH. In 1989, that planning was suspended because the Smithsonian secretary at the time, Robert McCormick Adams, prohibited seeking external funding for the project out of concern that this effort would jeopardize fundraising for the new National Museum of the American Indian (Lonetree and Cobb 2008; Walker 2013:222, 224; see “‘A New Dream Museum,’” this vol.). For the same reason, the Smithsonian administrators discouraged efforts to solicit private funding to support the production of the *Handbook* (Burnette 1989; see “Production of the *Handbook*, 1970–2008,” this vol.).

Editing the *Handbook*, 1991–2007

The publication of *Handbook* volumes at regular intervals ceased between 1990 and 1996. Although revised plans for three volumes, *Languages*, *Plateau*, and *Plains*, were developed between 1985 and 1991 and work to finalize these volumes had begun, their completion was delayed by several years (Sturtevant and DeMallie 2001:xiii; Sturtevant and Goddard 1996:xi; Sturtevant and Walker 1998:xiv). The first to appear was *Languages*, published in 1996, followed by the publication in 1998 and 2001 of *Plateau* and *Plains*, respectively.

By 2001, the only culture area volume that remained to be published was *Southeast*. In 1998, a new planning committee for this volume was created, and in 1999, Jason Baird Jackson, a specialist in the ethnology and ethnohistory of the Southeast, agreed to serve as associate volume editor, assuming many of the duties of volume editor Raymond Fogelson (Sturtevant and Fogelson 2004:xiii). Sturtevant played a particularly significant role in revising the plans for the *Southeast* volume because the area had been the focus of his research for more than four decades. He also coauthored one chapter (Sturtevant and Cattelino 2004) and provided an overview of the history of linguistic research in the region (Jackson et al. 2004), a topic that he explored in greater detail in another essay (Sturtevant 2005).

In 2002 Sturtevant invited Douglas H. Ubelaker, curator of physical anthropology in the Department of Anthropology, to serve as a new editor for volume 3, *Environment, Origins, and Population*. To move it toward publication as efficiently as possible, Ubelaker engaged three other scholars (Bruce D. Smith, Dennis Stanford, and Emőke J.E. Szathmáry) with expertise in the diverse topics to collaborate in developing a revised plan for the volume, to which Sturtevant also contributed (Sturtevant and Ubelaker 2006:xi–xii; Ubelaker 2006a:v).

In April 2005, the Smithsonian administration announced its decision to stop funding the *Handbook* project in 2007 (Evans 2005). In June 2005, Garrick A. Bailey accepted Sturtevant’s invitation to become the new volume editor for volume 2, *Indians in Contemporary Society*. Bailey assembled a new planning committee, which, by the end of the year, had created a radically revised outline for the volume and a list of potential contributors (Bailey 2008a:xi). Sturtevant participated in the planning of this volume, but by 2006, his health had begun to decline, and he was forced to curtail his work on the *Handbook* as well as other professional activities. He retired from the Smithsonian in January 2007 and died two months later, on March 2, 2007, at the age of 79 (Jackson 2007; Krech 2008). Volume 2, *Indians in Contemporary Society*, was released in July 2008, one day before what would have been Sturtevant’s eighty-first birthday.

Conclusion

Between 1966 and 2008, hundreds of scholars participated in the planning and production of the *Handbook* series. Sturtevant could not have fulfilled his role as its general editor without their collaboration, but at the same time, it is doubtful that the development and accomplishments of the *Handbook* project would have been possible without his contributions. He was a generalist scholar in an era of increasing specialization in Native American studies and in the field of anthropology as a whole. The breadth and depth of his knowledge of Native North America, unparalleled among his contemporaries, and his unwavering commitment to the highest standards of scientific excellence inspired confidence in his ability to provide the intellectual leadership required to produce the *Handbook*. He freely shared his knowledge and perspectives with other people who were key to the realization of the *Handbook*. Their willingness to invest time and energy in the project was motivated not only by their recognition of its significance to Native American studies but also by their bonds of collegiality and friendship with Sturtevant.

In a collaborative endeavor like the *Handbook*, distinguishing the impact of any single individual from that of the collective is impossible. Three features of the *Handbook*, however, can likely be attributed primarily to Sturtevant’s influence. The first was the reliance on history as an implicit organizational framework for the series as a whole and the emphasis placed on presenting Native societies and cultures within the context of their histories, both before and after European contact. The second was the prominence given

to Native American languages and linguistics, a topic that is the focus of one *Handbook* volume (Goddard 1996c) and is discussed in some detail in most other volumes in the series. The third was the inclusion of numerous early depictions of Native American subjects in drawings, paintings, engravings, and photographs. In 1966, when the *Handbook* project was launched, Sturtevant was one of the few anthropologists who recognized the importance of such illustrations as sources of data on Native American cultural history (Merrill 2002a:19, 29–30).

From the outset of the *Handbook* project, Sturtevant devoted much of his time to fulfilling his duties as general editor, but he also engaged in various other professional activities (Merrill 2002a, 2002b). He regularly sponsored fellows, interns, and visiting scholars at the Smithsonian and served as an adjunct professor of anthropology at Johns Hopkins University in Baltimore (1974–1989), as a Regents Lecturer at the University of California, Berkeley (spring 1981), and as a member of the Boards of Trustees of the Museum of the American Indian–Heye Foundation (1976–1982, 1984–1986) and Survival International (1982–1988). He was elected president of the American Ethnological Society (1977–1978), the Council for Museum Anthropology (1979–1981), the American Anthropological Association (1980–1981), and the Anthropological Society of Washington (1992–1993). He also continued his research and writing on Native American ethnology, cultural history, and linguistics; on the role of museums and archives in the anthropological endeavor; and on early European representations of the New World and its Indigenous peoples (see full bibliography in Merrill 2002b).

Sturtevant dedicated his career to enhancing an understanding of Native North American cultures and

societies among both specialists and the public, and he regarded serving as the *Handbook* general editor as an incomparable opportunity to pursue this goal. Although frustrated by the delays in the publication of the *Handbook* volumes, he never doubted the importance of the series, and he remained hopeful, even after the Smithsonian administration decided to end the project, that it would eventually be completed. The fact that 5 of the 20 planned *Handbook* volumes were not released when the project was suspended in 2008 does not detract from the importance of the 15 published volumes, which constitute the core of the series he envisioned. These volumes represent, individually and collectively, a monumental achievement and a major component of William C. Sturtevant's enduring legacy to Native American studies and to North Americanist anthropology.

Acknowledgments

The author is grateful to Ives Goddard, Ira Jacknis, Igor Krupnik, Cesare Marino, and Joanna Cohan Scherer for their many helpful comments on earlier drafts of this chapter. Copies of key archival documents were kindly shared by Joanna Cohan Scherer, Igor Krupnik, and Adrianna Link, and crucial archival and library assistance was provided by Ellen Alers, Bryn Cooley, Maggie Dittmore, Leslie Fields, Caitlin Haynes, and Pamela Henson. Additional information was provided by Laurie Burgess, Colin Busby, Paula Fleming, Conne Fox, Candace Greene, Pamela Hudson-Vaanbaas, Frederick Reuss, Mary Tanner, and George Thomas.

Production of the *Handbook*, 1970–2008: An Insider's View

JOANNA COHAN SCHERER

In December 1966, Margaret C. Blaker hired me to assist her in the operation of the Smithsonian Office of Anthropology Archives, formerly known as the Bureau of American Ethnology (BAE) archives and later known as the National Anthropological Archives (NAA), for which she served as archivist. In 1970, William C. Sturtevant, general editor, invited me to work on the *Handbook of North American Indians* (HNAI) as its illustrations researcher, and on October 1 of that year, I transferred from the NAA to the *Handbook's* newly formed office.

Having come from the NAA, I was already familiar with its extensive historical photograph collections. Sturtevant himself was very knowledgeable about early drawings of North American Indians, having published extensively on the subject (Sturtevant 1960a, 1962a, 1964a, 1965b, 1967b, 1968a), and he was keen to have the *Handbook* volumes well illustrated. Our shared enthusiasm for finding never-before-published images allowed me to travel to repositories and archives and visit photographers all over the United States, Canada, and Europe.

I served as the *Handbook* illustrations researcher for 36 years, until retiring in May 2006 (see “Appendix 1,” this vol.). During my tenure, I created a collection of more than 100,000 images, both photographs and images of early drawings of Native American subjects, only a small portion of which could be used in the 15 *Handbook* volumes published between 1978 and 2008. The entire image collection is now housed in the NAA (Handbook of North American Indians Papers 1970–2007, 1978–2008), offering a unique resource for researchers.

Although the preface of each *Handbook* volume included a brief history of its planning and boilerplate information on the production process, no critical overview of the 38-year production history (1970–2008) of the published volumes has ever been written. This chapter identifies the key management, personnel, and technical factors that affected the Smithsonian *Handbook* project over that period, particularly the management reviews of 1975, 1981, 1994, and 1999, and provides such an overview.

1970–1975

Initial planning of the HNAI began in the mid-1960s, and detailed planning was completed by 1972 (see “The Beginnings, 1965–1971,” this vol.). Originally scheduled for publication by the bicentennial celebration of 1976, the core of the *Handbook* series was envisioned to comprise 11 culture area volumes, complemented by 5 topical volumes, a 2-volume biographical dictionary, an introductory volume, and an index volume. By 1972, the *Handbook* editorial office staff was complete enough to begin production. The editorial staff was made up of seven permanent positions: William C. Sturtevant, general editor; Carol H. Blew (replaced by Betty T. Arens), editorial assistant; Diane Della-Loggia, manuscript and copy editor; Lorraine Jacoby, bibliographer; Joanna Cohan Scherer, illustrations researcher; Jo Ann Moore, scientific illustrator and cartographer; and Marianne Koskouras, secretary; and also included William L. Merrill, one-year research assistant.

In 1970–1971, the first *Handbook* editorial office occupied Rooms W516 and W517 within the Department of Botany, in the west wing of the National Museum of Natural History (NMNH). In 1972, the office was moved temporarily to the second floor of the main building and then to Room 85, on the museum ground floor, which had been designated for use by the Center for the Study of Man (CSM). In 1974, the room was remodeled into a two-floor office to better accommodate the growing *Handbook* staff and other projects administered by the CSM. There were separate rooms for staff members and a large open production space that was divided, as needed, into cubicles for temporary staff, fellows, and interns. This was our permanent space until the project was closed in 2007.

Protocol for Processing the Handbook Manuscripts

The protocol for processing manuscripts for the various *Handbook* volumes was established by the general editor in the “Guide for Contributors” (Sturtevant 1971a). When authors completed their draft

manuscripts, they were to send them first to the general editor for review, with the bibliographic citations and preliminary index entries for their chapters on index cards. When Sturtevant had approved the manuscript, a copy was retained in the *Handbook* editorial office and the original was forwarded to the volume editor for review. When the volume editor had approved the text, it was returned to the general editor. In many cases, however, authors sent the drafts of their manuscripts directly to the volume editors, who might request that members of the planning committees for their volumes review the content. A revised first draft of the manuscript was then sent to the editorial office (see also "Organization and Operation," this vol.).

Authors were paid \$0.02 a word, a symbolic amount that ensured that the Smithsonian held the rights to the manuscript. Under this arrangement, the *Handbook* office staff could revise the manuscript if needed and ultimately decide whether to publish it or not (Anonymous 1970).

The completion of approved final manuscripts often involved months and sometimes years of discussion among authors, volume editors, and Sturtevant. Nonetheless, the editorial staff members typically began reviewing a draft manuscript as soon as it arrived in the editorial office so they could begin planning for the accompanying illustrations, maps, and tables and undertake the research required to produce them. Photographs, which had to be ordered from many external sources, including private collectors, photographers, and foreign repositories, often took months to acquire.

Once a manuscript was approved by Sturtevant and the volume editor, the editorial staff began its final work. The manuscript and copy editor ensured that the manuscripts conformed to established standards of usage and style, recommended revisions if needed, and confirmed that the manuscripts were accurate down to the smallest details. The editorial assistant extracted the scientific names of plants and animals, which were verified by specialists. The manuscript and copy editor also created schedules for manuscript completion.

The bibliographer checked the bibliographic cards against the in-text citations in the manuscripts, resolved conflicts between citations of different editions, corrected inaccuracies and omissions, and checked direct quotations against the originals. Bibliographic information was verified by consulting the original work or by comparing citations provided by authors with entries in library catalogs such as the National Union Catalog at the Library of Congress, the Smithsonian Libraries card catalog, and the published catalog of the Harvard Peabody Museum Library. Because the

were combined into a single volume bibliography, each card was assigned an alphanumeric code so that bibliographies could be created for the offprints of the individual chapters.

Although some authors submitted photographs, maps, and other illustrations to accompany their chapters, or at least provided suggestions for visual material, most did not. As a result, responsibility for selecting illustrations fell largely to the illustrations researcher and the scientific illustrator, who also prepared captions. Drawings, paintings, and engravings that pre-dated photography were sought in both private and public collections, but the artifacts selected for illustration were from public repositories only, to ensure that they would be available for future research. No unidentified "generic" Native American photographs were considered, even if they were photographically excellent. The illustrations researcher endeavored to acquire original prints from photographers, many of whom were volume contributors, as well as high-quality prints from repositories. Artifact illustration relied heavily on the holdings of the Smithsonian Department of Anthropology, which contained many early, well-documented collections.

The number of illustrations to be included in each chapter was based on the length of the chapter. In 1972, it was decided that 2.75 pages of illustrations—1.25 printed pages of photos (equal to about six photos) and 1.5 pages of line drawings, maps, charts, and diagrams—would be appropriate for every 10 printed pages of text. In 1973, this ratio was increased to 3 pages of illustrations per 10 printed pages. After several volumes had been published, it was determined that 2 pages of illustrations per 10 printed pages would be the rule. The total number of illustrations published in the 15 volumes was about 14,800. For a breakdown of maps, ethnological artifacts, archaeological artifacts, staff drawings, nonstaff drawings, and photos of people and activities, see table 1.

Because the illustrations included in each chapter were intended to supplement rather than simply illustrate the text, the staff compiled detailed documentation on the images and artifacts to be used in captions. This documentation was collected from the repositories and, when possible, from the original photographers, as well as from members of the communities represented in the illustrations. The production of maps also often required considerable background research by the *Handbook* staff because they presented information on topics not detailed in the chapter text, ranging from archaeological sites and tribal territories at different points in time to colonial missions and non-Indian settlements, historic trade routes, battle sites, and areas affected by treaties.

During this initial period of *Handbook* series production, a key decision had to be made: How would it be printed and distributed? On November 27, 1973, Gordon Hubel and Stephen Kraft, director and managing designer, respectively, of the Smithsonian Institution Press, joined Sturtevant and Sam Stanley, program coordinator of the CSM, in a meeting with representatives of the Congressional Joint Committee on Printing. They concluded that the most effective approach would be to establish an agreement with the Government Printing Office (GPO, known since 2013 as the Government Publishing Office). The GPO, an agency of the legislative branch of the federal government, is the official resource for the production and distribution of information products and services for all federal entities, including the Smithsonian Institution.

The GPO was regarded as the ideal partner for *Handbook* production because it had the expertise required to produce technically complex publications and the capacity to ensure that the multivolume series could be printed in an expedited manner to meet the bicentennial deadline (Hubel 1973). The plan was that the *Handbook* staff would submit camera-ready copy of each volume to the GPO, which would contract with commercial printers to complete the printing. The GPO would supervise the fulfillment of contracts and take responsibility for marketing and selling the volumes, distributing them free of charge to the extensive network of federal depository libraries, and maintaining them in print (Kelley 1999: appendix, p. 7).

Around the time the agreement with the GPO was being worked out, a policy intended to maintain a detailed record of the entire *Handbook* production process was established. Sturtevant, a strong advocate of archives in general and the NAA in particular, worked closely with archivist Margaret Blaker to develop policies for the NAA (Sturtevant 1969a). From the outset, he insisted that the *Handbook* staff maintain complete records of their production work and research activities. On August 30, 1973, in response to the *California* volume editor Robert Heizer, who had suggested to editorial assistant Betty Arens that the volume editors' files should be archived, Sturtevant wrote:

I think it is an excellent idea, and I will keep it in mind. However, I do not want to propose it to other editors at this stage, for fear of inhibiting their letter writing. The prospect of archiving doesn't deter everyone.... But I recall how my father destroyed much of his correspondence after hearing me talk about the interesting letters I was reading in the Hodge and Cushing papers in the Southwest Museum. So, I'll ask our co-editors after their work is done (Sturtevant 1973d).

It soon became established protocol for correspondence between the volume editors and their authors to be copied and sent to the *Handbook* editorial office. The editorial assistant was responsible for maintaining files of this correspondence, as well as the correspondence produced by the editorial staff labeled as "READ." These files are now housed in the NAA (Handbook of North American Indians Papers 1969–2007).

The original deadline for submission of all chapter manuscripts was the spring of 1972, but by the end of that year, the Handbook office had received fewer than a third of the planned manuscripts (see "William Curtis Sturtevant, General Editor," this vol.). The editorial staff began to process the manuscripts that had arrived, but over the course of 1973, initial optimism that the 20 volumes of the *Handbook* series could be published by the 1976 bicentennial celebration began to wane because most volumes were far from complete.

Early Management Issues and the 1975 Audit

Toward the end of 1973, Diane Della-Loggia, Jo Moore, Lorraine Jacoby, and I decided as a team to concentrate on volumes 8 (*California*; Heizer 1978b) and 15 (*Northeast*; Trigger 1978a), because they had the highest percentage of chapter manuscripts received and accepted by their volume editors. By working almost exclusively on those accepted chapters, staff members hoped that these two volumes could be published by 1976. As it turned out, neither would be released until 1978. To some degree, our plan paralleled that of Sturtevant, who had already decided that working on the illustrations for the *California* volume would be a priority for the *Handbook* staff. On September 7, 1972, following discussions with scientific illustrator Jo Moore, he wrote to Robert Heizer, volume editor of *California*, that "we agree that the *California* volume would be the best one to focus on for a while, to set standards for illustrations for the whole *Handbook*" (Sturtevant 1972f).

Although Sturtevant was aware of the staff's approach, he could not openly sanction it because this new strategy ran counter to the official plan for the simultaneous publication of all volumes in 1976. In keeping with that official plan, in April 1975 he submitted a revised publication schedule to the Smithsonian's Bicentennial Coordinator's Office that anticipated the publication of all 20 volumes of the *Handbook* by July 1978 (table 2; Sturtevant 1975b).

The Smithsonian administration was becoming increasingly concerned about the entire project and the likelihood that none of the volumes would be published by 1976 despite having been funded as part of the bicentennial budget. The extent of the project's

SOURCE: Sturtevant 1975b.

managerial problems was revealed by a complaint of discrimination that I filed on February 6, 1974, against the Department of Anthropology. After a U.S. Equal Employment Opportunity Commission hearing in March 1975, the discrimination complaint was found in my favor on March 12, 1975; it was shown that there was a climate of discrimination against women in the Department of Anthropology in both hiring and promotion and that *Handbook* management needed improvement. In a later case (*Scherer v. Ripley*, CA 77-1856), the U.S. District Court for the District of Columbia determined that *Handbook* management had engaged in numerous incidents of reprisal against me, and it decided in my favor but not until February 1982.

In the summer of 1975, David Challinor, Smithsonian assistant secretary for science, and Charles Blitzer, assistant secretary for history and art, requested that the Smithsonian Office of Audits conduct the first audit of the *Handbook*. "The purpose of the audit was to review the management of the project to determine why the printing of the Encyclopedia, to be funded with Bicentennial funds of over \$900,000 would not be completed in time for the Bicentennial. . . . The offices of the General Counsel and the Smithsonian [Institution] Press were included to the extent necessary" (Peratino 1975:1).

The seven-page audit report was distributed in December 1975. It noted with some disapproval the

Handbook staff's plan to focus only on the *California* and *Northeast* volumes and the fact that the staff was, in effect, creating its own production plan and schedule. In addition to indicating measures that could make the production process more efficient and effective, the audit recommended that a full-time project manager be hired to be in charge of production of the *Handbook*, that periodic reports be prepared to keep management and volume editors abreast of the progress of the project, and that shifting the editorship of *Technology and Visual Arts* (vol. 16) from Sturtevant to someone else be considered (Peratino 1975:4-6).

Despite the Smithsonian administration's reservations, the editorial staff focused its efforts on volumes 8 and 15, *California* and *Northeast*, for publication because they were so near completion. Final work also began on volume 6, *Subarctic* (Helm 1981) and volume 9, the first of the two *Southwest* volumes (Ortiz 1979), for which a great number of chapters had been accepted. Progress on these volumes was advanced by the creation, between 1973 and 1976, of five new staff positions: an assistant illustrations researcher (1973), a bibliographic assistant (1974), a cartographer (1975), a second scientific illustrator (1975), and a second illustrations researcher (1976). In addition, many research assistants, interns, and volunteers provided assistance on these and subsequent volumes (fig. 1).

1976–1983

Management and Progress

In July 1976, James Mello, assistant director of the NMNH, was placed in charge of the Handbook office. As the *Handbook*'s first project manager, he was responsible for overseeing the operations of the *Handbook* staff, a role previously filled by Sturtevant. A new position, eventually named production manager, was created to monitor the progress of manuscripts through the production process. Mello appointed Diane Della-Loggia, the manuscript and copy editor, to this position. Her principal task—to develop production schedules for manuscripts from submission through publication—required continual adjustments to accommodate the actual completion of the contributions of the authors, editors, and staff. She was also responsible for identifying errors in the galleys and page proofs and ensuring that the final bound volumes conformed to *Handbook* standards. She also prepared quarterly reports on the *Handbook*'s progress (e.g., Della-Loggia 1977a, 1977b, 1983).

In August 1976, Ives Goddard was hired as assistant curator in the Department of Anthropology with the responsibility of serving as the linguistic editor of the *Handbook* series. Goddard, formerly a postdoc in the Department of Anthropology in 1969–1970, had already acted in this capacity and also as editor of volume 17, *Languages* (Goddard 1996c) while teaching at Harvard University. Goddard was responsible for ensuring that all aspects of the *Handbook* related to

Native American languages were accurate and that the words were presented to the degree possible according to a standardized technical alphabet or orthography that had been developed for the *Handbook* (as explained in the preface of each volume; e.g., Sturtevant and Heizer 1978:x–xi). The manuscripts were reviewed by the editorial assistant, who identified the words that required Goddard's attention. He relied on scores of linguistic consultants in fulfilling these responsibilities and prepared orthographic footnotes for the tribal chapters that explained the spelling systems used to represent Native words. He also expanded many of the "Synonymy" sections that summarized the etymology and history of the various tribal names used to identify the Native American groups treated in the chapters.

Between 1976 and 1981, volumes 8 (*California*), 15 (*Northeast*), 9 (*Southwest*), and 6 (*Subarctic*) were finalized and published. (Volume 9, *Southwest*, was printed in early 1980 with an official publication year of 1979.) Starting in January 1981, the staff focused on volume 10, the second *Southwest* volume (Ortiz 1983). A reception, usually attended by the volume editor, was organized to celebrate the publication of each of these volumes (table 3), except for the joint reception for the two *Southwest* volumes held on September 6, 1983 (figs. 2, 3).

Extension of the Handbook Production Schedule

Despite these initial successes, 16 volumes of the *Handbook* series remained to be published in 1981,

and the Smithsonian Office of Audits conducted a second audit of the *Handbook*. What precipitated the audit is unknown; its records have not been saved (Tad Bennicoff, personal communication, April 30, 2015), but the *Handbook* was one of several NMNH projects

that were reviewed. The audit recommendations survive in the form of a three-page summary report (Perafino 1981a).

The audit report noted that “at the current rate of production the HNAI may not be completed until the year 2005 or 17 years longer than the most recent publication schedule shows.” Among the recommendations to speed up the production process were hiring a full-time project manager, increasing the production staff and streamlining their functions, providing additional personnel to assist the general editor in reviewing and accepting manuscripts, and submitting an updated publication schedule annually to the NMNH director and the assistant secretary of science. Mello, at the time both acting director of the NMNH and project manager of the Handbook office, focused on complying with the recommendations, noting:

No one here is satisfied with the production publication schedule for the Handbook of North American Indians. . . . On the other hand, we are very pleased with the quality of the Handbook and its wide acceptance, and do not want to do anything to lower quality. I’ve no good idea how we can retain the quality and materially accelerate the schedule without additional resources of some sort (Mello 1981a).

On November 5, 1981, Mello submitted a revised production schedule, created by Della-Loggia and Sturtevant, to the director of the NMNH, with a copy to the assistant secretary for science. This schedule extended the completion of the entire *Handbook* series to 1992 if the project was given a full staff and all manuscripts for the volumes were in hand at the start of production (Mello 1981b). In the fall of 1982, as a follow-up to the audit recommendations, Colin Busby was hired as the *Handbook* series’ first full-time managing editor to oversee the day-to-day activities of the staff.

A few months later, Goddard shared his perspectives on the *Handbook* with Busby:

As a general framework, let me make the following observations: The *Handbook* staff are intelligent, dedicated, experienced professionals, with a high degree of pride in their work. Successfully to make the transition to the new management system and tighter scheduling, management must rely on their experience (and be perceived as taking the expertise of the staff seriously) . . . by maintaining (and being perceived to maintain) the high standards of the *Handbook* that instill the pride in workmanship so crucial to this undertaking (Goddard 1983).

The slow progress of *Handbook* production was sometimes attributed to Sturtevant, who insisted on carefully reviewing all chapter manuscripts, illustrations, and other accompanying materials, in addition

to fulfilling his curatorial duties, pursuing his research, and undertaking a wide variety of professional activities (see “William Curtis Sturtevant, General Editor,” this vol.). In fact, similar concerns had been raised more than a decade earlier when the *Handbook* management structure was created (Cowan 1970). At that time, Sturtevant rejected the plan to transfer him from the Department of Anthropology to the CSM to devote all of his time to the production of the *Handbook*, responding that “I have made time for the *Handbook* by dropping or postponing other commitments and plans for my own research and writing” (Sturtevant 1970b). By 1983, his perspective had changed. “I agree that no matter what, I am a bottleneck. Further, I cannot continue to devote even as much time as I have in the past [to the *Handbook*]. Thus, I must have a (partial) substitute, & one I can trust.” (Sturtevant 1983b)

The potential leadership vacuum led Mello and Douglas Ubelaker, then chair of the NMNH Department of Anthropology, to convene a meeting of the series volume editors on August 15–16, 1983, to discuss options for completing the *Handbook* within the existing time and financial constraints. According to Mello’s notes from these meetings, this *Handbook* review committee included volume editors Warren d’Azevedo (vol. 11, *Great Basin*), David Damas (vol. 5, *Arctic*), Raymond DeMallie (vol. 13, *Plains*), Raymond Fogelson (vol. 14, *Southeast*), June Helm (vol. 6, *Subarctic*), and Wayne Suttles (vol. 7, *Northwest Coast*). Sturtevant and *Handbook* staff members Colin Busby, Diane Della-Loggia, Jo Moore, and Joanna Cohan Scherer, as well as Smithsonian employees and editors Ives Goddard (vol. 17, *Languages*) and Wilcomb Washburn (vol. 4, *History of Indian–White Relations*), participated in parts of the meeting (Mello 1983b).

The actions considered included streamlining the review process, eliminating some planned volumes, reducing coverage for each volume, reducing the number of illustrations, shifting more responsibility to authors and volume editors, convincing the Smithsonian administration to commit more resources to the project, and partnering with other institutions in the production of certain volumes (Mello 1983b). At the end of a two-day session, volume editors could not agree on how best to move forward. At the conclusion of the meeting, Sturtevant agreed with many of the critical comments and recommended that Raymond DeMallie be considered as his replacement (Mello 1983b). DeMallie had recently been made editor for volume 13, *Plains*, taking over from William Bittle, but DeMallie had insisted that Sturtevant be the guiding light for the series. Neither he, nor any of the other volume editors were willing to be considered as the general editor.

Following the meeting, Richard Fiske, the director of the NMNH, reorganized the management of the *Handbook* office. Fiske reported to the office staff and volume editors that “for some volumes I will ask the volume editor to act as the Chief Executive for that particular volume, under contract with the Smithsonian. For those volumes where the volume editor will not serve, we will seek to hire temporarily young professional anthropologist[s] expert in the pertinent fields to assist us” (Fiske 1983). In theory, Fiske’s vision offered a good way to reorganize management of the *HNAI* production, but most volume editors had other professional responsibilities that did not allow them to assume additional duties. In fact, some of the duties of volume editors were fulfilled by associate volume editors, members of the volumes’ planning committees, or coordinators of certain sections (see “The *Handbook*: A Retrospective,” this vol.), with whom the office staff often worked more closely than with the editors themselves.

By the time of the meeting, Mello had begun distancing himself from the management of the *Handbook*, and in October 1983, managing editor Colin Busby resigned. As a result, in November 1983, Fiske transferred the administration of the *Handbook* to the museum’s Department of Anthropology.

The cost of the continued operation of the *Handbook* was also becoming of greater concern to the administration. Although Congress provided the funds to cover the costs of producing the series as part of the Smithsonian’s annual budget, the proceeds from sales of *Handbook* volumes went to the U.S. Treasury, not the Smithsonian. The proceeds were not inconsequential. As noted in the “Handbook Quarterly Report” of June 1983, “The GPO had sold 17,665 copies of *California* [vol. 8], 15,166 copies of *Northeast* [vol. 15], 11,312 copies of *Southwest* [vol. 9], and 4,856 copies of *Subarctic* [vol. 6]. These 48,999 books have sold for a total of \$990,577, making the *Handbook* volumes some of the most important in the GPO inventory” (Della-Loggia 1983). Nonetheless, it was estimated that it cost the Smithsonian about \$2 million to produce those four volumes (Busby 1983a).

1984–1993

Management and Progress

Between 1984 and 1990, four additional *Handbook* volumes were published: *Arctic* (vol. 5 [Damas 1984]), *Great Basin* (vol. 11 [d’Azevedo 1986a]), *History of Indian–White Relations* (vol. 4 [Washburn 1988a]), and *Northwest Coast* (vol. 7 [Suttles 1990]) 539

(figs. 4–7). By 1990, a total of eight culture area volumes and one topical volume had been produced, with three culture area volumes and four topical volumes in various stages of preparation. Progress on the *Biographical Dictionary* and *Introduction* volumes was minimal.

In January 1985, linguistic editor Ives Goddard assumed the duties of the managing editor. The following year, beginning in September 1986, he also took over many of the duties of the general editor during the latter's absence abroad, and in January 1989, he assumed the role of technical editor as Sturtevant re-

moved himself more and more from daily oversight of the project (Sturtevant and Suttles 1990b:xv). At the same time, Karla Billups was hired as the Handbook office's last managing editor (see "Organization and Operation," this vol.).

Soon after assuming her duties, Billups sent a six-page memorandum to Frank Talbot, NMNH director. Having come from trade publishing, she observed that at least some problems of the *Handbook* could be attributed to the fact that it "has not been planned, managed, or financed as the publishing entity that it is." She noted that the museum had failed to provide the

funding required to ensure uninterrupted production and urged that private funding be secured to supplement the *Handbook* allocation from the museum annual budget and provide much needed computer equipment. She also argued for finding a way of re-channeling some of the proceeds of the sale of the volumes back into its production (Billups 1989).

Technology Gap

The *Handbook* editorial staff had been facing the challenges of technology lag for several years. During the initial 17 years of operation (1970–1987), the staff used similar technology as its predecessor, the

two-volume *Handbook of American Indians North of Mexico* (Hodge 1907–1910), published 70 years prior. Staff members relied on regular mail to communicate with authors and volume editors and to order photographs, created index cards for each of the thousands of bibliographic entries, cataloged each photograph, and made hand drawings of artifacts and maps.

Although the Smithsonian acquired its first main-frame computer in 1967, remote terminals were not available until 1977, and the Smithsonian did not adopt desktop computers until 1981–1982. Various brands of computers were acquired, but most were Decmate-II word processors without hard drives; data were stored on large, eight-inch floppy disks. Robert McCormick Adams, who became secretary of the Smithsonian in January 1984, was the first to have a desk computer. By April 1984, 12 of the 22 curators in the Department of Anthropology had computers in their offices, but there were no computers in the *Handbook* office. Over the next two years, the various brands of personal computers were replaced with IBM-compatible personal computers, and in the summer of 1986, 100 IBM personal computers were delivered to the Smithsonian. Yet, by August 1993, only about half of the museum staff had personal computers (David Bridge, personal communication, April 7, 2015), and the *Handbook* staff appeals to get personal computers were denied because curators were given priority. After appealing directly to the Automatic Data Processing Office in March 1988, I was given a used Decmate-II from retired stock. Though outdated, this word processor dramatically speeded completion of the captions and the cataloging of incoming photos, and shortly thereafter, all illustrations team members were given word processors. In 1991 or soon after, all the *Handbook* staff received personal computers and finally could communicate via e-mail with authors and volume editors.

In a memo to Talbot, Billups argued that computer equipment was a basic necessity (not a luxury) for the *Handbook* office (Billups 1989), but the museum and Smithsonian administrations were less than sympathetic. Mary Tanner, the NMNH assistant director for administration, commented on Billups's request that, between 1979 and 1989, the museum had provided the *Handbook* with support for two additional positions (bringing the total from 8 to 10 positions) and a 117 percent increase in funding to defray nonpersonnel costs and that at the end of fiscal year 1988, *Handbook* management had returned or reprogrammed to the Department of Anthropology \$40,000 that could have been used to purchase computers (Tanner 1989).

Secretary Adams requested that Alice Green Burnette, assistant secretary for institutional initiatives, also evaluate Billups's memorandum, to which

Burnette responded that “raising private funding for this purpose [*Handbook* series] could really get in the way of NMAI [National Museum of the American Indian] fundraising efforts” (Burnette 1989). The NMAI was incorporated into the Smithsonian in 1989.

In April 1991, the *Handbook* was advised that federal funds that had been carried over since the 1970s would be lost due to an across-the-board policy change in government funding. Billups, the managing editor, warned that losing these funds meant “the death of the program” (Billups 1991). This included the loss of \$44,000 of contracts to authors for chapters not yet received, funds to pay the expenses of the volume editors, and \$476,000 to pay for typesetting, printing, and binding of the volumes as they became ready for publication. The loss of this \$520,000 was critical to the NMNH administration’s decision to seek yet another audit of the *Handbook* (Tanner 1991). This audit was initiated in January 1994. It was probably this financial loss that caused Secretary Adams and NMNH director Frank Talbot to consider closing the *Handbook* project (Scherer 1994).

As of September 30, 1993, more than 112,000 copies of the *Handbook* volumes had been sold, generating more than \$3 million in proceeds (*Handbook of North American Indians Papers* 1993:30). The staff was informed that the Inspector General’s Office was pursuing the possibility of rechanneling some of these funds to support the completion of the *Handbook*, but this rechanneling never occurred.

1994–1998

Management and Progress

The *Languages* volume (Goddard 1996c) was in active production throughout the mid-1990s. The volume editor, in keeping with *Handbook* tradition emphasizing scholarship over speed, insisted that the authors review the typographically complex proofs instead of just the edited copy. The production manager, Diane Della-Loggia, was torn between Goddard’s request for such reviews and the insistence of Dennis Stanford, then chair of the Anthropology Department, that the volume be published by the end of 1996 (Scherer 1996a). In the end, the official publication date of 1996 was maintained although the books were not received until March 1997. The publication celebration was held on March 13, 1997.

In addition, to generate revenue for the *Handbook*, Goddard, in collaboration with Jeannine Schonta of Maryland Cartographics, a division of GeoSystems, and Karen Ackoff and Dan Cole of the *Handbook* of-

fice produced a detailed color map, “Native Languages and Language Families of North America” for the volume, which was later sold separately by the University of Nebraska Press (Goddard 1996e). Intense work on the *Plateau* volume began in November 1990 and manuscripts were accepted from 1995–1997 (Walker 1998). Raymond DeMallie had assembled a new planning committee for the *Plains* volume in 1985 and actively worked on the volume until 1987 but final drive did not begin until 1998 (DeMallie 2001a).

Administrative Pressure to Complete the Series

Between January 31 and September 9, 1994, the Office of the Inspector General conducted an audit of the NMNH. The 18-page final report, released in January 1995, devoted five pages to the *Handbook* and was quite critical. It noted the history of shifting deadlines for completion of the 20 volumes, originally to be completed in 1976:

In 1979, handbook management stated that the handbook would be completed by 1988, in 1981 by 1990, in 1988 by 1993. The handbook staff has not produced a volume since 1990. Most recently, the Managing Editor stated that the handbook would be completed by 2004. However, the Managing Editor could not provide written schedules or status reports that support the current completion date (Office of the Inspector General 1995:5).

Given the rate of production between 1978 and 1990—one volume every 2.2 years—the report estimated that the project would not be completed until 2014. It also identified a significant new challenge: a number of manuscripts that had been accepted more than a decade earlier for yet unpublished volumes were out of date and would need to be revised. The report also noted that sales of the last two *Handbook* volumes, vols. 4 (Washburn 1988a) and 7 (Suttlés 1990), had declined by 66 percent relative to the sales of the first two volumes (Heizer 1978b; Trigger 1978a) in their first four years of publication, indicating a declining interest in the series.

At a staff meeting on December 8, 1994, the staff was advised that the Inspector General had recommended terminating the production of the *Handbook* and that management would commit only to completing the last of the culture area volumes, volumes 12 (*Plateau*), 13 (*Plains*), and 14 (*Southeast*). They were also informed that the chair of the Department of Anthropology would have additional authority in dealing with the volume editors and that the chair would be eliminating chapters, canceling contracts of authors who had failed to make their deadlines, and significantly revising the production process (Scherer 1994).

In June 1995, acting provost Robert S. Hoffmann requested that William Merrill, acting chair of the Department of Anthropology, produce within a month a viable plan for the production of the remaining *Handbook* volumes for review (Merrill, personal communication, April 16, 2016). To develop this plan, Merrill interviewed all *Handbook* office members. The staff, in consultation with Merrill and deputy chair Carolyn Rose, asked to be given control of the production of the series with a rotating staff member serving as liaison with the department chair. The production team wanted to prove it could resolve past managerial problems and complete the series. On July 29, 1995, the *Handbook* staff produced by consensus a detailed memorandum on the production schedule for the next four years (Della-Loggia 1995b). Nine pages of attachments listed current *Handbook* staff members and vacancies, indicating their responsibilities in the production process; summarized resources needed to fulfill publication goals; and gave an overview of the production schedule for volumes 12 (*Plateau*), 13 (*Plains*), 14 (*Southeast*), and 17 (*Languages*). Department leadership never responded to the staff's request to self-manage the production of the remaining *HNAI* volumes.

By the fall of 1995, two crucial staff positions—cartographer and bibliographer—were vacant, the artifacts researcher was part-time, and managing editor Karla Billups had resigned. In September, the Department of Anthropology began exploring the possibility of taking the production of the series outside the Smithsonian and requested proposals from three publishing service providers. The proposals were reviewed by *Handbook* staff. The consensus was that these proposals involved literally taking over of the entire project and hiring “someone to do tasks that are clearly already being done, in fact well, by an incumbent” (Della-Loggia 1995a). On November 30, 1995, the Smithsonian Board of Regents was informed that, based on the findings of the 1994 audit, the Smithsonian would save \$500,000 annually if *Handbook* production were shut down. The Inspector General recommended to the Regents that the project be ended in three or four years (Office of the Inspector General 1995). Closing down the *Handbook* was then under consideration at the highest levels of the Smithsonian (Scherer 1995). Four years later, in 1999, the Regents' unhappiness with the pace of the program would resurface and another *Handbook* office audit was initiated.

In the spring of 1996, after the attempt to outsource the *Handbook* had failed, the office staff again proposed that they manage the project by committee with a rotating liaison with the chair of the Department of Anthropology (Scherer 1996c). The administration

again ignored this proposal, and Carolyn Rose, deputy chair of the Department of Anthropology, became the de facto managing editor and *Handbook* program manager.

By this time, Sturtevant had removed himself from the daily oversight of the production process, but he continued to attend staff meetings. At one of these, in June 1996, he stated that, in order to increase production, the staff should lower production standards by, for example, no longer having the bibliographer check all quotes in the chapter manuscripts and by reducing the number of illustrations in future volumes (Scherer 1996c; see “Organization and Operation,” this vol.). The latter reduction never materialized and only volume 2, *Indians in Contemporary Society* (Bailey 2008a) had far fewer illustrations per page. The staff did cut some of the expenses by no longer producing offprints of chapters for the authors.

By the end of 1996, the *Handbook* footprint in the museum also was reduced. A portion of space that had been used by *Handbook* staff for almost two decades was converted into the NMNH Registrar's Office. The editorial staff was down to six positions, plus Carolyn Rose. Nonetheless, production of volume 12, *Plateau* (Walker 1998) continued. No publication party was held in the summer of 1998, because of an impending 66 percent cut in the *Handbook* budget, which was officially announced in October 1998 (Scherer 1998a).

1999–2007

Management and Progress

The *Handbook* office continued its work, focusing on volume 13, *Plains* (DeMallie 2001a), which was published in two separate books, because it was too large to be bound in a single volume. The volumes were labeled “Volume 13, Part I” and “Volume 13, Part II” because “Volume 14” had been used for decades to designate the next area volume, *Southeast*. Volume 14 was published three years later (Fogelson 2004), but to cut production costs, it did not include a detailed list of illustrations, in contrast to several earlier volumes in the series (vols. 4, 7, 11–13). Its release was celebrated on April 22, 2005 (fig. 8).

By 2000, the *Handbook* office had been reduced to five full-time and one part-time members: Ives Goddard, linguistic editor; Cesare Marino, bibliographer; Melvina Jackson, administrative specialist; Paula Cardwell, editorial liaison and staff coordinator; Joanna Cohan Scherer, illustrations researcher; and Diane Della-Loggia, production manager/manuscript editor. Cuts in the *Handbook*'s 1999 budget precluded

National Anthropological Archives, Smithsonian Institution.

filling the vacant positions of assistant illustrations researcher, artifacts researcher, and cartographer.

After completing volumes 13 and 14, the staff focused on volume 3, *Environment, Origins, and Population* (Ubelaker 2006a). Bringing this complex volume of almost 1,150 pages—the largest in the series—to publication was difficult. Its first editor, Frederick S. Hulse, agreed to serve in 1970 but resigned in 1982. He was replaced by Richard I. Ford, a member of the first planning committee, who also resigned in 1991. The volume lacked an editor for more than a decade, until 2002, when Smithsonian curator Douglas Ubelaker agreed to serve in this role. The volume was published in 2006 and was celebrated on April 17, 2007, the last of the publication receptions (table 3). Sturtevant, who passed away in March 2007, was honored at this party, and his widow, Sally McLendon, attended. As the staff photograph was taken, she held up a portrait of the late general editor (fig. 9).

The only other volume with three successive editors was volume 2, *Indians in Contemporary Society*

National Anthropological Archives, Smithsonian Institution (2858).

Fig. 9. *Environment, Origins, and Population* publication party, April 17, 2007, in the Carolyn Rose Seminar Room, Department of Anthropology, NMNH. back row, left to right, Sally McLendon (holding photo of William C. Sturtevant), Doug Ubelaker, Ives Goddard. front row, left to right, Joanna Cohan Scherer, Dennis Stanford, Diane Della-Loggia, Paula Cardwell, Vicki Simon, Aleithe Williams, Cesare Marino. (NAA, HNAI Papers, Box 16, Series 8)

(Bailey 2008a), the last completed. In this case, the first two editors died before it could be produced: D'Arcy McNickle (d. 1977) and Vine Deloria, Jr. (d. 2005). Garrick A. Bailey agreed to serve as editor in June 2005 and was informed that it had to be completed in two years because the entire *Handbook* series would be shut down in September 2007. He accepted the challenge but soon learned that many chapter manuscripts were sorely out of date. The whole volume had to be rethought; in the end, only two of the original chapters were retained, and one of these had to be rewritten. The lightning pace of production resulted in a volume much slimmer than the preceding 14 volumes and many topics that the editor wished to include had to be dropped because no author could be found in the shortened period (Bailey 2008a:xii).

Closing of the Handbook Office and Termination of the Series

By the time volume 2 was released in 2008, the Handbook office had been officially eliminated. By then, the effort to close the office and terminate the series had extended over several years. In January 1999, Ross Simons, the NMNH associate director for research and collections, had contracted with Wayne Kelley, Jr., to conduct another audit of the *Handbook*. Kelley had experience in both the public and private publishing sectors, having been the superintendent of documents in the U.S. Government Printing Office from 1991 to 1997 (Wendy Wiswall, personal communication, March 23, 2016). The results of Kelley's review were presented in a 35-page report completed in April 1999.

Based on the staff vacancies, Kelley concluded that additional contract staff were needed and that *Plains* (vol. 13) would not be published by the target date of late 1999 or early 2000 without additional staff resources (Kelley 1999:2). There was a call for management decisions, because "the Handbook series is in danger of becoming what it set out to cure. A worthy reference source sadly out of date. . . . The Handbook series is a great idea. It is a project that is easy to fall in love with. And nearly impossible to manage" (Kelley 1999:4-5).

Kelley noted that, as a result of the early 1990s change of policy concerning held-over funds, "the Handbook was required to return several hundred thousand dollars to the Treasury" (Kelley 1999:1). The *Handbook* had been holding over printing funds and obligations to authors who had not yet finished their assigned chapters (Mary Tanner, personal communication, March 7, 2016). This was a significant

blow to the project. He also observed that the "driving force of the series lies outside the Smithsonian. The Volume Editors make the difference.... Action to replace overcommitted Volume Editors and Authors is required" (Kelley 1999:2).

The report proposed a revised production schedule, recommending that the *Plains* volume be completed but that serious consideration be given to dropping the *Southeast* volume (vol. 14), because the manuscripts in hand (about 80 percent of the volume) were "very old." Kelley also recommended using joint ventures to publish the remaining volumes 3 (*Environment, Origins, and Population*), 2 (*Indians in Contemporary Society*), and 16 (*Technology and Visual Arts*) (Kelley 1999:14-21). Kelley's review did not result in any modifications to internal procedures, and his recommendations regarding volumes 2, 3, and 14 were never tried.

In April 2005, David Evans, the Smithsonian undersecretary for science, advised the Department of Anthropology that the *Handbook* project would be closed by the end of fiscal year 2007 (September 30, 2007), and that the six remaining volumes scheduled for production had to be completed by that time. On June 15, 2005, the chair of the Anthropology Department, J. Daniel Rogers, responded that, of the volumes yet to be published, only volumes 2, 3, and 16 could be completed by the end of September 2007 (Rogers 2005b). He also noted that the completion of volume 16 was possible only if it was outsourced to an external editor; for that role, Christian Feest, North American ethnologist at the Museum für Volkerkunde in Vienna, Austria, was recommended. Initial funding of \$282,500 was requested for volume 16. Without substantial additional funding, the other volumes remaining to be published—the two-volume *Biographical Dictionary* (vols. 18 and 19), *Introduction* (vol. 1), and *Index* (vol. 20)—could not be completed (Rogers 2005b; see "The *Handbook*: A Retrospective," this vol.).

In an effort to secure external funding to support production of the remaining volumes, Rogers explored the possibility of establishing a partnership with the Alexander Street Press of Alexandria, Virginia. This press specialized in producing electronic collections of published and unpublished accounts from early sources and was in the process of creating a series presenting a wide range of perspectives on Native Americans. It was interested in securing the electronic rights to a text-only version of the existing volumes of the *Handbook*, from which maps and illustrations would be excluded.

The *Handbook* staff was opposed to this option. As Ives Goddard wrote to William Fitzhugh, chair of the Department of Anthropology, on March 12, 2005:

At the Handbook staff meeting last week we discussed the idea of a text-only electronic version of the Handbook. We saw many serious problems with this. 1) The maps are integral and are what many readers are looking for. 2) The illustrations are also usually integral and the captions are written with additional information not duplicated in the text. 3) There are many cross-references to the maps and illustrations within and between volumes. 4) We should not encourage an inferior version of our product, which no amount of explanation will be able to justify for many users (Goddard 2005b).

The royalties from the electronic publication were estimated to be only about \$25,000 over three to five years, and the proposal received no support from the *Handbook* staff, the NMNH, or Smithsonian management (Fitzhugh 2005).

I retired in May 2006, becoming an emeritus anthropologist, but I maintained my desk in the Handbook office. Ives Goddard retired in March 2007, becoming senior linguist emeritus. The final *Handbook* staff then included six members: production manager and manuscript editor Diane Della-Loggia, editorial liaison and staff coordinator Paula Cardwell, bibliographer and researcher Cesare Marino, illustrations researcher Elizabeth Hartjens, scientific illustrator Roger Roop, and rights and reproductions coordinator Erica Davis Choucroun.

On October 4, 2007, J. Daniel Rogers, chair of Anthropology, and Elizabeth Duggal, the NMNH associate director for external affairs and public programs, announced that the Handbook office would officially close on December 8, 2007. In a display of the commitment of the editorial staff, Diane Della-Loggia and Cesare Marino, although officially retired, worked as volunteers through July 2008 to assist in the publication of volume 2 (Bailey 2008a). The Handbook office space was then redesigned for use by the Department of Anthropology's Repatriation Office, and the remaining staff retired or found employment elsewhere.

Conclusion

The most productive period in the publication history of the *Handbook* was from 1978 to 1986, which saw the completion of seven volumes: *California* (Heizer 1978b), *Northeast* (Trigger 1978a), the first *Southwest* volume (Ortiz 1979), *Subarctic* (Helm 1981), the second *Southwest* volume (Ortiz 1983), *Arctic* (Damas 1984), and *Great Basin* (d'Azevedo 1986a). The *Handbook* staff identified three principal reasons for this high level of productivity.

First, the Handbook office was fully staffed with 10 full-time positions: two illustrations researchers,

an assistant illustrations researcher, an artifacts researcher, a scientific illustrator, a cartographer, a bibliographer, an assistant bibliographer, an editorial assistant, and a secretary as well as numerous interns and volunteers. Second, for most of this period, the supervisors in NMNH and the Department of Anthropology—James Mello from 1977 to 1982 and Douglas Ubelaker from 1983 to 1984—allowed staff members to do their own scheduling and problem solving. They also supported the work of the office by filling vacant positions and providing assistants when needed. Third, the editors of these seven volumes or their designated representatives recognized the expertise of the staff members and encouraged them to make decisions necessary to complete their work, in some cases coming to Washington when the staff requested their assistance.

At the same time, certain factors contributed to delays in the production of the series. Perhaps most significant was the unwavering commitment to excellence that the editorial staff shared with the general editor, volume editors, and contributors (see "Organization and Operation," this vol.). The operative driving principle was attention to detail and scholarship in all aspects of the *Handbook* series at the expense of everything else, including publishing deadlines. The staff was also confronted by a number of logistical challenges. At the beginning of the *Handbook* project, approximately five years (1972–1977) were devoted to working out the details of the production protocol. It was often difficult to predict the time required to complete the different components. For example, drawings and photographs of activities and artifacts were coordinated to produce complex composites that were time consuming to execute. This effort was justified, because one of the goals of making a drawing of an object was to enhance it by showing the technique of its construction (Moore, personal communication, April 28, 2015; see "The *Handbook*: A Retrospective," this vol., fig. 4).

One complicated example in volume 7, *Northwest Coast*, related to Makah whaling (Renker and Gunther 1990:424). The illustrations team often decided which artifacts could best be drawn, depending in part on how much space was available in the chapter and how long it would take to make the drawing. Scientific illustrator Karen Ackoff noted that a simple, straightforward pen-and-ink illustration might take an hour or two. A complex illustration—such as details of totemic figures on a Northwest Coast canoe that she made from a specimen in the Smithsonian collection at the request of the artifacts researcher Ernest Lohse—could require a great deal of research and take four weeks or more to complete (Suttles 1990:9;

Ackoff, personal communication, March 31, 2015, and March 7, 2016). In that case, the ink wash drawing was so outstanding that it was subsequently featured in an exhibit in the New York State Museum in Albany in 2000 and was republished in Ackoff (2010:2) and Hodges (2003:161) (fig. 10).

In addition, many authors did not submit suggestions for maps or provide organized bibliographies. Daniel Cole, *Handbook* cartographer from 1986 to 2007, estimated that fewer than 25 percent of authors actually submitted maps (Cole, personal communica-

tion, February 12, 2015). Bibliographer Cesare Marino noted that most contributors did not keep up with the most recent publications in their respective fields, so he added them to the chapters' references (Marino, personal communication, February 13, 2015). As the relevant literature grew over the course of the publications, so did the sheer size of the volume bibliographies (table 4).

The staff also had little leverage over the chapter authors, who often failed to respect the page limits set for their texts or to prepare and revise their manuscripts

Drawings by Karen Ackoff (Suttles 1990:9).

Table produced by Cesare Marino.

on time, offering intriguing explanations for their delays (Cardwell, personal communication, February 20, 2015). The results were extended production schedules, disrupted publication processes, and ever-longer volumes. The volume editors were responsible for ensuring that the chapter authors submitted their manuscripts, but in practice, the editorial assistants often fulfilled this duty.

History is too important to be based on memories alone. Only by reviewing the archival record of the *Handbook* project—the interoffice communications, schedules, audits, notes from staff meetings, and correspondence with editors and authors—can the production of the 20-volume series be fully understood. In retrospect, one could marvel at what the *Handbook* team accomplished, even when confronted with inadequate technological resources, personnel constraints,

insufficient funding, and management inexperience. I spent 36 years working on the production of the *Handbook* series. It is a source of great satisfaction that this current volume is helping to complete the series as it was initially envisioned—an effort to which many of us devoted our professional lives.

Acknowledgments

For valuable assistance in the editing of this chapter from a much longer version, the author would like to thank William Merrill. Research for this chapter was aided by interns Kerrie Monahan (2014–2015), Sarah Dressel (2015), Emily Solomon (2016), Hannah Toombs (2016–2017), Elizabeth Gibbons (2017), Meagan Shirley (2017), and Etta Zajic (2019–2020).

Organization and Operation: Perspectives from 1993

CHRISTIAN CARSTENSEN

From January to August 1993, I worked as an intern in the editorial office of the *Handbook of North American Indians*. Four years earlier, I had completed my master's thesis in anthropology at the University of Tübingen, writing about economic conditions on the Warm Springs Indian Reservation in Oregon and the Pine Ridge Reservation in South Dakota. In the course of my studies, the *Handbook* always had been one of the first sources of information, and I was always impressed by the size and scope of the detailed knowledge compiled in its pages. I had become increasingly interested in museum studies and the relationship between museums and Native American communities. Therefore, in 1992 I applied for, and was awarded, an internship at the Handbook office at the Smithsonian Institution, where I worked for seven months as Joanna Cohan Scherer's assistant doing illustration research for the *Handbook* series (see "Production of the *Handbook*, 1970–2008," this vol.). I researched illustrations for volume 13, *Plains* (DeMallie 2001a) as well as for the Benedicte Wrensted historical photography project (Scherer 2006).

During my internship in 1993, the Handbook office comprised 11 staff people. A few weeks after I arrived, I started asking staff members about the nature of their responsibilities in the production process. What began as informal conversations soon evolved into a set of more formal interviews. Over the course of these months, my role also shifted from that of an intern to a participant-observer who lent an ear to the stories of the *Handbook* staff members.

In these interviews conducted and recorded in February–August 1993 (table 1), the *Handbook* staff members not only described their activities in detail, but shared their perspectives on the broader institutional context within which the Smithsonian *Handbook* series operated. They discussed the challenges they faced in producing a work of such magnitude in the face of diminishing resources and waning institutional support (see "Production of the *Handbook*, 1970–2008," this vol.).

Many members of the *Handbook* team were clearly frustrated with the perception of their work by their

colleagues, the Smithsonian administration, and the science community at large:

We are in a difficult position, because unfortunately sometimes we are perceived as the bad guys, whereas we are the good guys. We are here trying to fix something, not to disrupt anything. . . . The authors, or even the public outside, or the anthropological community . . . [do] not realize that we are a small staff of dedicated people working very hard in trying to get these things out. And . . . you have seen us, the amount of work, the material, and how much work has been done. But people on the outside don't even know where the Handbook office is. (Cesare Marino, May 17, 1993)

When I returned to Germany to begin writing my doctoral thesis, I shared my data with my PhD advisor, Prof. Christian Feest, who had contributed five chapters to the *Handbook* volumes 4 (*History of Indian–White Relations*) and 15 (*Northeast*; Feest 1978a; 1978b; 1978c; 1988; Feest and Feest 1978) and would eventually lead the work on volume 16, *Technology and Visual Arts*, in the early 2000s (see "The *Handbook*: A Retrospective," this vol.). He encouraged me to explore my experience and analyze the general situation of the *Handbook* in the 1990s using my notes and interview transcripts from 1993 within the theoretical framework of organizational studies (Carstensen 1999).

This analysis revealed that three different professional communities were involved in the *Handbook* process, with different perspectives on the "ways we do things around here"—in short, three distinctive group cultures, according to Edgar Schein's definition:

The culture of a group can . . . be defined as a pattern of shared basic assumptions that was learned by a group as it solved its problems of external adaptation and internal integration, which has worked well enough to be considered valid and, therefore, to be taught to new members as the correct way to perceive, think, and feel in relation to those problems. (Schein 2010:18)

In the Handbook office, these three colliding group cultures consisted of anthropologists, representative of the Americanist tradition and of scientific scholarship, in general; the Smithsonian administration

because the *Handbook* series was a part of the larger Smithsonian Institution operating system; and the publishing business with its particular requirements of editing and publishing a multivolume series or encyclopedia (Carstensen 1999). One crucial culture clash concerned the writing style required for scholarly publications and for encyclopedic texts. In the “publish-or-perish” culture of academia, scientists must present new and original findings, different from what has been published before. They take personal positions in scholarly debates and distinguish themselves from or align themselves with their colleagues’ ideas, often in highly contested fields. In contrast, an encyclopedic article is the opposite in its style and purpose. It is designed to summarize existing knowledge in a “neutral” and concise way, and it should be written in nontechnical language so that an interested layperson can understand the text. This was the main challenge for all (or most) authors of the *Handbook* volumes, as well as for the Handbook office staff, whose task was to turn the diverse submitted manuscripts into coherent contributions to the monumental 20-volume series.

From the beginning, the *Handbook* team’s goal was to produce a series encompassing all reliable knowledge about the aboriginal populations of North America that would measure up to the standards and the reputation of the Smithsonian Institution. This goal grew out of the recognized obsolescence of many of the *Handbook* predecessors, primarily the first Bureau of American Ethnology (BAE) handbook (Hodge 1907–1910), and the desire to produce a reliable source for all readers, including Native Americans, people interested in Native cultures and communities,

anthropology and history students, and agency workers (see “The Beginnings, 1965–1971,” this vol.).

The *Handbook* series stands out for its scholarly accuracy, its magnitude, and its complexity. These features can be attributed especially to William C. Sturtevant, whose well-known perfectionism and strive for scholarly excellence was pointed out by all staff of the Handbook office (see “William Curtis Sturtevant, General Editor,” this vol.). Another critical factor was that the *Handbook* series was published by a public institution, the Smithsonian, rather than by a private publishing company. No private company would have been willing to provide the tremendous resources necessary to produce a series of such magnitude and devote such attention to detail and quality over several decades. Moreover, no private publisher would have then been able to sell the volumes for a price that average scholarly readers as well as Native American tribal colleges and community institutions could afford. It was a perfect match between individual and institution that produced one of the most revered projects in the Smithsonian Institution’s history.

This chapter presents a glimpse of the *Handbook* operation as of 1993, from the perspective of an outsider. Personal observations during my seven-month stint in the office are supported by excerpts from interviews with the Handbook office staff, who provided insights on the production process and its principal players. All interviews were conducted in 1993, except for one interview with William Sturtevant, the *Handbook* general editor, and his wife, Dr. Sally McLendon, a contributor to volumes 8 and 17, recorded in 1997, during the Eighteenth European American Indian Workshop in Frankfurt am Main, Germany.

The Handbook Staff's Commitment to Excellence

I vividly remember my first day at the Handbook office. I had anticipated meeting a staff of a couple dozen people working in spacious modern offices, equipped with state-of-the-art computers. What I encountered instead was more like a submarine: a warren of cramped quarters, most with no windows, only artificial light, and ceilings covered with pipes and electrical conduits. The staff was small. People's computers were outdated. Even the phones and furniture reminded me of something from movies of the 1950s or 1960s.

This initial encounter, nonetheless, created an instant admiration for the people who were producing one of the most ambitious publication series in the history of North American Indian studies. That admiration grew steadily over the following months. The commitment of the Handbook office staff to maintaining their high scholarly standards was in part a reflection of the anticipated impact that the *Handbook* series would have as a basic reference work on diverse matters regarding the Native peoples of North America. As Sturtevant stressed in his 1971 "Guide for Contributors," which he circulated to all participating authors:

It is particularly important to remember that this work is likely to have significant effects on living Indian people and on their relations with their neighbors and with the larger society. It may well influence what the schools teach about Indians; it will be a source for popular writers; it will be used by officials with administrative powers over Indians; it will be examined by Indians searching for information on the history and culture of their own people. The attitudes and points of view expressed—implicitly as well

as explicitly—the vocabulary used, the balance between topics, should all be considered in relation to these uses. (Sturtevant 1971a: 1–2)

During the initial years of the *Handbook* planning and production process, Sturtevant would spend the mornings of each workday in his curatorial office on the third floor of the National Museum of Natural History, and then, in the early afternoon, he would come down to the Handbook offices on the ground floor to oversee the progress of the project (see "William Curtis Sturtevant, General Editor," this vol.). As the general editor, Sturtevant considered himself personally responsible for the final product. As bibliographer Lorraine Jacoby noted, "Nothing left the office, nothing was done without his approval. He was the final authority." (Lorraine Jacoby, May 27, 1993)

The *Handbook* staff fully embraced Sturtevant's fervor for perfection. As Diane Della-Loggia (fig. 1), *Handbook* manuscript editor and production manager, commented:

The real reason [that we do everything so thoroughly] is because Dr. Sturtevant is really a perfectionist. And he has very, very high standards. The point of view is, this is the Smithsonian, and this is a reference book, which is theoretically being written [to last] for 75 years. (Diane Della-Loggia, May 7, 1993)

As Della-Loggia explained, this perspective was shared by all *Handbook* staff members, who had benefited from Sturtevant's guidance in developing the skills required to fulfill their responsibilities:

Most of us who are here, I would say half the staff, were trained by him 20 years ago. The staff has not turned over.

Photograph by Richard Hofmeister. National Anthropological Archives, Smithsonian Institution (78-5877-8).

Fig. 1. Diane Della-Loggia, *Handbook* manuscript editor and production manager, and William C. Sturtevant, general editor, at *California* volume publication party, November 1978, in the American Indian Hall, National Museum of Natural History.

Lorraine [Jacoby], Joanna [Scherer], myself have all been here 20 years and more working on this project. And others are maybe only the second person in the position. For instance, Paula [Cardwell] is not the first person in that position, but she was trained by Sturtevant; she worked for him in the Department [of Anthropology]. So his vision is still very much informing the way this is going. I think it doesn't matter if he's not here anymore, because he is here inside of our heads.

Her views were echoed by Cesare Marino (fig. 2), the *Handbook* series researcher and reference bibliographer:

I think he has enough trust in us that he allows us to work fairly independently on certain aspects, even though we consult him all the time on major issues. He knows that we know what we are doing, therefore he doesn't need to come down here and check every two minutes what we are doing. There is no reason for him to bother, to waste his time, he can do something else. He wants it to be done in a certain way, and we are trying to do it his way.

During my 1993 tenure at the Handbook office, the project managing editor, Karla Billups, the then official head of the office, seemed to have minimal influence on the *Handbook* final products, because the staff members continued to consult with Sturtevant on all crucial matters and considered him to be the final authority on all professional issues related to the *Hand-*

book process. In effect, the *Handbook* staff members had embraced and internalized Sturtevant's values and perspectives as their own, creating a particular "group culture" with a set of shared basic assumptions as its core (Schein 2010:18).

These basic assumptions are difficult to change, particularly if a founding leader is still active in a group project (Schein 2010:233). When the Smithsonian administration threatened to discontinue the funding for the *Handbook* series' owing to the delays in publication of several volumes, some changes in procedures were called for (see "Production of the *Handbook*, 1970–2008," this vol.). But these changes probably could only come through Sturtevant or at least with his explicit consent. In 1997, Sturtevant met with the *Handbook* staff to update them on the challenges they were facing at the time:

The pressure was on from the administration: "Get this thing [*Handbook*] out or we kill it. No more money!" Then I said to the editorial staff, "We have to lower our standards in order to get the series finished." They, all of them, have internalized my idea that the quality level has to be kept up. So, when I said, "I know it would be poor, but we have to publish it, let's accept it and go with it," they realized that this was an exception, and they did not like it. And I am pleased that they did not. But if we do not publish, we do not complete it. The money [for the production] is gone, so now the standards inevitably have to be lowered in order to

Photograph by Christian Carstensen.

Fig. 2. Cesare Marino, *Handbook* researcher and reference bibliographer, May 1993.

get it out. So I think it will affect our subsequent volumes.
(William Sturtevant, March 25, 1997)

Nevertheless, pursuit of excellence remained the guiding principle of the *Handbook* team throughout the production process, which took almost four decades, until the office was finally closed and the series was discontinued in 2008.

The Editorial Process

The *Handbook* series overarching goal was to summarize everything known about the Native peoples of North America, “published or unpublished . . . from prehistoric times up to the present” (Sturtevant 1987:1). Achieving this ambitious goal required the collaboration of hundreds of specialists, and Sturtevant had in mind contributors with certain characteristics. They should be individuals

who have a well-rounded thorough knowledge of their topics, are responsive to Indian viewpoints, and can provide an accurate report in an appropriate written style before the agreed-on deadlines. Ideally, an author’s knowledge of the subject should be gained by a combination of childhood training and adult participation in an Indian society, by field research (ethnographic, linguistic, or archaeological), and by work with documentary sources. There are not nearly enough scholars sharing all these characteristics; a concerned search has been made for those who most closely approach the ideal. (Sturtevant 1987:2)

Detailed guidelines for contributors explained the goals of the *Handbook* series, listed the topics to be covered in each chapter, and provided instructions for preparing the manuscript (cf. Sturtevant 1971a). An 11-page “Bibliography Style Sheet” presented conventions for in-text citations and bibliographies.

The *Handbook* was intended to be a compendium of information with each chapter covering a broad range of topics in a coherent way. In some cases, information on certain topics was lacking, requiring chapter authors to engage in new research:

It is also the case that, although the *Handbook* is presented as “This is to be a summary of the existing knowledge,” over and over again the author realizes, “This knowledge does not exist, so I’ll find it out.” So it is new, it is new research that has been encouraged. (Sally McLendon, March 25, 1997)

Even though most authors endeavored to follow the editor’s guidelines and conventions, the creation of a homogeneous 20-volume series required monumental effort on the part of the editorial staff:

What people do not realize is that what goes out as a printed *Handbook* is the product of a lot of work by a lot of people under a number of different professional categories. We could not, I stress that, take the chapters submitted by the contributors and just publish them. Often the articles [in one volume] come from 60 different people. It takes a lot of work to standardize each volume of the *Handbook* into something that is coherent. This is not a collection of essays; it should be an integrated homogenous volume. I do not think that people realize how much really the *Handbook* staff works to get this thing to publishing standards. (Cesare Marino)

Della-Loggia described the process as one of ongoing adjustment and realignment:

Not that we have rewritten texts, but we have checked and rechecked and sort of realigned them [each chapter] into the point of view [common to] other authors in the book, so that they are not at odds with each other.

Special requirements of producing a compendium like the *Handbook* were also noted in the prefaces to each published volume. For example:

The published versions frequently reflect more editorial intervention than is customary for academic writings, for the encyclopedic aims and format of the *Handbook* made it necessary to attempt to eliminate duplication, avoid gaps in coverage, prevent contradictions, impose some standardization of organization and terminology, and keep [the content] within strict constraints on length. (Sturtevant and Suttles 1990:xiii)

In the “Guide for Contributors” (Sturtevant 1971a), authors were asked to have friends and colleagues review their chapters so that their manuscripts would be close to final drafts before they were submitted to the Handbook office. Once submitted, the editorial review process began.

As they were received, the manuscripts were reviewed by the volume editor, the general editor, and usually one or more referees, who frequently included a member of the volume Planning Committee and authors of other chapters. These extensive reviews often resulted in suggestions for changes and additions (Sturtevant and Suttles 1990:xiii). When the volume editor and general editor gave their approval to a manuscript, it was tagged as “accepted”—“the big A-word,” as it was called in the office—and turned over to the editorial staff. The pathway of a manuscript through the editorial process is illustrated in fig. 3.

Paula Cardwell (fig. 4), who served as Sturtevant’s editorial liaison from 1984 to 2007, was responsible for managing communication with authors, handling contracts, and logging and administering all of the incoming manuscripts:

My desk is sort of a clearinghouse for all the information that comes in here. All manuscripts and any kind of correspondence related to the manuscripts come through me. I act as a go-between for Sturtevant, the authors, and the volume editors. (Paula Cardwell, May 19, 1993)

Originally, Cardwell was also responsible for sending out manuscripts for peer review in the name of

Sturtevant and the volume editors, as well as for reminding authors if their manuscripts were overdue for submission. Sometime before 1993, this part of her job had shifted increasingly to volume editors. From Cardwell's perspective, the volume editors had unnecessarily increased their workloads, which slowed the pace of publication significantly. She considered these activities to form a logical part of her role in the *Handbook* process and believed that, since the volume editors often had close relationships with the authors, she could be more effective in pressuring delinquent authors to turn in their manuscripts.

Cardwell was not the only administrative person in the *Handbook* office (see "Production, 1970–2008," this volume). Melvina Jackson's administrative specialist's job (fig. 5) was to support the *HNAI* staff in all administrative matters, allowing her to call herself a "problem solver." Her responsibilities included administering personnel and the budget, making payments, managing contracts, timekeeping, and handling the "red tape" of bureaucracy, even though, in her words, "half the things they [the Smithsonian and federal administration] demand do not make sense" (Melvina Jackson, July 2, 1993). She, nevertheless, had to follow the myriad instructions, which explains why production of the *Handbook* often advanced so slowly.

The editorial process involved a series of activities: verifying the accuracy of the manuscripts' content and correcting mistakes, integrating new knowledge created after the manuscript had been approved, producing maps and drawings, and selecting images and artifacts to accompany the text. Additional tasks sometimes included preparing synopses of the phonologies of the languages whose speakers were the focus of the chapter and compiling different names ("synonyms") that had been used through time to label the Native American societies in question.

The submitted manuscripts required considerable effort on the part of the editorial staff to convert them into publishable texts, according to the *Handbook* style format. Many draft chapters were plagued with inaccuracies. As Marino explained it:

Some major inaccuracies . . . a lot of little inaccuracies. But if you have a lot of little inaccuracies in one chapter, if you multiply by fifty and publish it, it is a mess. That is what is taking so long. The chapters need Diane [Della-Loggia], they need Lorraine [Jacoby], they need my input, they need the cartographer's input, they need Joanna's [Scherer] input, they need Karen's [Ackoff] input, and Ives's [Goddard] input on the synonymy. They could not go out without our combined input. (Cesare Marino)

For each submitted volume chapter, a cover sheet was created that listed the tasks to be done. It had to be

Photograph by Christian Carstensen.

Fig. 5. Melvina Jackson, *Handbook* administrative specialist, May 1993.

signed and dated by all staff members after they completed their assigned tasks.

In the review of a manuscript, Della-Loggia first confirmed that the author had remained fully focused on the topic of the chapter and then checked for inconsistencies within each chapter and across different chapters. If she encountered inconsistencies among the chapters in the same volume, she tried to locate information to resolve it, but it was not always possible.

In a recent manuscript I had two authors who both claimed that a certain battle took place about five years apart. They both had published references for their sources. So in that case I sent copies of the manuscripts to both authors and asked them to decide what we should say. (Diane Della-Loggia)

To ensure consistency, Della-Loggia, along with the general editor, the linguistic editor (Ives Goddard), and the volume editors established a set of conventions, which Della-Loggia consulted in her editorial review. She followed a standard procedure.

I make what I call "style-sheeting." I report every unusual thing, even if it is a regular word, if it is unusual. For example, "tepee" is spelled in a couple of different ways, legitimately, and we have chosen one way for the *Handbook* [tepee], and I write down what page it is on. And many times the names of tribes have not been decided yet when I am editing; it is still unclear how to spell them. . . . So I have to record every single page number, every single line that appears in every manuscript in the whole book, because

as sure as I have chosen "e," they are going to come up with "i," but then I have no problems to find and fix it. I keep this whole page [with notes] on every single manuscript. . . . At the very end of the volume[,] . . . when every manuscript is in, I sit down with these 50 or 60 sheets of paper, and I read them over and look for contradictions. (Diane Della-Loggia)

Of course, this process was dramatically simplified later, when the *Handbook* office staff had better computers and software and could simply search and replace the items in the manuscript files.

Bibliographic issues required a large investment of time. In the beginning, Sturtevant had considered it unnecessary to verify all citations and references, and the original task of Lorraine Jacoby (fig. 6) (the first *Handbook* series bibliographer) had been to combine the bibliographies of each chapter into a single volume bibliography. Early in the process, however, she often discovered inaccuracies and inconsistencies, and the decision was made to check all bibliographic items. After 1983, she was assisted by Marino; he also updated the chapter bibliographies and filled in gaps in chapters' coverage. He and other *Handbook* staff members pointed out the dual roles they often played:

We are handling such a special project: the *Handbook* is a special project of the Department, and of the Museum, and of the Smithsonian, so we are peculiar in that we are both, at the same time, a research and a publishing unit. (Cesare Marino)

Photograph by Christian Carstensen.

Fig. 6. Lorraine H. Jacoby, *Handbook* bibliographer, May 1993.

Other staff members provided complementary materials that authors often were unable to produce themselves, like synonymies, photographs, maps, and illustrations. Ives Goddard (fig. 7), the series linguistic editor, prepared, or helped authors and volume editors prepare a synonymy section for each tribal chapter that summarized the often voluminous and confusing variety of names used to designate Native American groups through time. The goal was to provide systematic and standardized linguistic data.

From the beginning we wanted to raise the standard for the citation of linguistic forms from what anthropologists were used to. All of this had been getting weird, so we set up a principle procedure, whereby every linguistic form, thus every human word that an author wanted to cite, would be edited by a linguistic specialist. So that every language would be cited in a consistent spelling system, a consistent orthography, which is according to the latest technical standards, the latest linguistic analysis. This spelling system for each language will be explained in the volume because previously the practice had been to sort of cite or read however it was spelled in the source. If you are writing about the Cherokee, someone might cite one word the way Mooney spelled it and another the way somebody else spelled it. (Ives Goddard, August 16, 1993)

All *Handbook* volumes were accompanied by illustrations and maps. Illustrations researcher Joanna Scherer (fig. 8) was responsible for locating and documenting photographs and other images that were dynamic and of high quality, and that, if possible, had not been published before and provided additional information to the text. She normally started with the visual material provided by the authors, but to a large extent she personally located the illustrations that were eventually used in the printed volumes (see “Production of the *Handbook*, 1970–2008,” this vol.).

I try to get documentation on each photograph. So the information that goes into the caption is descriptive information about who the persons are, maybe what they are wearing, if

it is a traditional type of clothing, where it was taken, who took it, the date it was taken, where you can find the photograph, and the negative number (Joanna Cohan Scherer, August 17, 1993).

Scientific illustrator Karen Ackoff (fig. 9) helped prepare photographs for publication, often by eliminating scratches and dust spots from older pictures. Her main responsibility, however, was to produce the drawings for the volumes. Drawings were necessary to reveal details of artifacts or cultural practices like body painting that were difficult to view from old photographs. Detailed drawings could sometimes take up to three months to complete and often required extensive research beforehand.

Photograph by Christian Carstensen.

Fig. 9. Karen Ackoff (left), *Handbook* scientific illustrator (1987–1997), and high school intern Becky Biddle, June 1993.

I research the drawings and sometimes there are things, like they show house types, different types of canoes, and there are things that have never been illustrated before. Sometimes I have to work from witness descriptions, other peoples' sketches, old bad photographs, and sometimes I have good photographs or good material or actual models, so it varies what I have to work from. . . . And sometimes, not very often, I have to travel to another museum to look at an artifact there. There is a costume in New York that is in the exhibit case that they cannot remove to get a good photograph of. So I had to go there and draw it. (Karen Ackoff, May 14, 1993)

Terry Arundel (fig. 10), the series cartographer in the early 1990s, not only produced the maps for the volumes but checked the accuracy of all geographic details, including verifying that geographical names were spelled correctly and that directions of rivers and ridges described in the text corresponded to reality. In addition, he identified modern names for geographical features that had borne different names in the past, because in the *Handbook* maps only current names were used:

Rivers change names, and there is an example on the very first map that I worked on for the *Handbook*, which was the Kiowa-Apache [Plains Apache] chapter. In that manuscript they were talking about the Red Fork of the Arkansas River. The Red Fork of the Arkansas River does not exist in the Board of Geographic Names as a name for a river in Oklahoma. So I had to verify first what river they are talking about. Because I can go to a current map and the Red Fork of the Arkansas River is not going to show up. . . . So I had to go and research, in the anthropology maps, to locate what they were talking about. . . . [I] research[ed] old maps. And then I found out exactly what they were talking about. It is the same river as the Cimarron River in Oklahoma. (Terry Arundel, May 26, 1993)

Photograph by Christian Carstensen.

Fig. 10. Terry Arundel, *Handbook* cartographer, May 1993.

When the staff had completed its work, the manuscript was returned to the author, who was given what staff members called a “three-week home trial” to review the proposed final version of the chapter and the complementary material prepared for it. If an author disagreed with the changes in the text (which, according to staff members, seldom happened), the staff consulted with the volume editor and made any needed adjustments. If the author accepted this version, the manuscript was filed away until it was delivered along with other volume chapters to the printer.

Challenges and Impact

According to the original plan, the entire 20-volume *HNAI* series was to be presented to the public on June 25, 1976, just a week before the bicentennial celebration of the U.S. Independence Day on July 4, 1976 (see “The Beginnings, 1965–1971,” this vol.). That date was selected to mark the one hundredth anniversary of the Battle of the Little Bighorn, in which a united force of Plains tribes defeated the U.S. Seventh Cavalry, under the command of General George A. Custer. The *Handbook* project was funded by a congressional appropriation to support programs for the 1976 bicentennial celebration, but by that date, no *Handbook* volumes had been produced. The slow pace of the series’ production raised serious concerns among the Smithsonian administration, who eventually started threatening to shut down the project entirely (see “Production of the *Handbook*, 1970–2008,” this vol.).

To defend the series, Karla Billups (fig. 11), managing editor from 1989 to 1995, estimated that the

Photograph by Christian Carstensen.

Fig. 11. Karla Billups, *Handbook* managing editor, May 1993.

around \$3 million in sales. These revenues, however, were not reflected in cost calculations for *Handbook* production because they were going to the U.S. Treasury rather than to the Smithsonian Institution, to the National Museum of Natural History, or to the *Handbook* office directly. Closing the *Handbook* office would, according to Karla Billups, “kill the goose that lays the golden eggs,” a point that apparently helped protect the *Handbook* office from closing until 2007, even though the series production was under constant financial pressure starting in the late 1980s, if not earlier:

Whenever [the Secretary] or somebody else wants to give a gift to someone, it is a *Handbook*. It is one of the few visible, touchable, tangible products produced by the entire Smithsonian. And yet . . . as I began to assess the situation, I [asked myself], “Why do I in my position have to beg for money every year? Why don’t I get some of the money back from the sales of the *Handbook*?” Nobody would have to worry about this then. . . . It wouldn’t be a drain on the museum, or a drain on the Smithsonian. When I feed 50 percent of the pursuits of the sale of the *Handbook* back into the office to perpetuate and complete it, I won’t have a problem here. Makes sense? Makes sense to me, but . . . ! Because federal money funds it, this money does not come back to the museum, it does not come back to the Smithsonian, it goes straight into the Federal Treasury. (Karla Billups, June 3, 1993)

As a scholarly work directed toward a broad audience, the *Handbook* series has been a principal source of information on North American Native cultures and societies for a wide range of media, including scholarly and popular publications and films.

Over and over again, you find people using maps that come out of the *Handbook* without crediting the *Handbook*, illustrations that come out of the *Handbook* without crediting the

Handbook. All the commercial publishers who have been turning out books on American Indians, the television documentaries on American Indians, have all gone to the *Handbook* to find maps, illustrations, [and] texts. If you know the *Handbook*, you can see this material coming up over and over. So it has had an enormous impact on the state of knowledge, and the nature of the knowledge, which people know and accept [as correct] about Indian people in the United States. (Sally McLendon)

The significance of the *Handbook* in the international scholarly community is perhaps best conveyed by the scholarly reviews of the individual volumes in the series as they appeared in print (see “The *Handbook*: A Retrospective,” this vol.). Many were from reviewers outside of North America and published in foreign journals, like the French *L’Homme* or the German *Zeitschrift für Ethnologie*. They demonstrate the international community’s appreciation of the *Handbook* series for its usefulness for all kinds of studies and for its reliable and wide-ranging information on Native American societies.

After the first *Handbook* volume, *California* (Heizer 1978b), was published, French anthropologist Claude Lévi-Strauss wrote a review for the French anthropological journal *L’Homme* praising the volume and the *Handbook* as an indispensable tool for all who work on the topic. He emphasized the enormous effort put in its production, especially by Sturtevant, with his extensive knowledge and his courage in facing and mastering a challenge of such monumental proportions. Lévi-Strauss was especially pleased that the editors and authors had countered stereotypical impressions of American Indians as “belonging to the past,” and at the same time, with the help of expressive illustrations, had shown that the descendants of the people described in the chapters were alive and thriving today:

Here is the first product of a monumental enterprise in gestation for more than ten years under the general direction of W. C. Sturtevant, who brings to the project his organizational talent, his immense erudition, and—one appreciates this on reading the pages where he introduces the whole project—the bold inventiveness and originality that characterizes it. . . . It is hardly necessary to add that the new *Handbook of North American Indians* promises to be what it already is for the California area: an absolutely indispensable tool that should be found on the shelves of all libraries, public and private alike. (Lévi-Strauss 1979: 77, 79; translation from Merrill 2002a:27)

As with Lévi-Strauss, the general perception of the *Handbook* in the broad Americanist community was overwhelmingly positive, although some reviewers found things to criticize, as Robert H. Lister pointed out in his review of volume 9 (Ortiz 1979) in 1981:

Most Handbooks are apt to be criticized by specialists because their format requires generalizations rather than comprehensive, detailed discussions. Furthermore, the opinions, biases, and personal experiences of the chosen contributors are reflected in their writings, and, even though editors strive to eliminate them, there may be contradictions, overlaps, and unexplained divergent opinions. . . . But, for the general reader, for students of anthropology and history, and for others with a concern for the Southwest, this is a tremendously important and useful reference book. Southwestern scholars, recognizing the aims and methods of the *Handbook*, should also find the summations and bibliographic references of immeasurable value to their future studies. It undoubtedly will be the standard, readily available, encyclopedic coverage southwestern Indians for years to come. (Lister 1981:213)

Reviewers appreciated not only the information provided in the chapters, but also the technical quality and the additional information in the form of illustrations, maps, synonymies, and extensive bibliographies.

The production of this book is superb. It is illustrated with hundreds of photographs, many from private collections and archival resources, which were selected by members of the permanent editorial staff. The figures are clearly drawn and the type face is large enough not to strain one’s eyes. Very few errors were noted in either the text or the bibliography. Both the bibliography and the index are well prepared and invaluable to the specialist fieldworker and the interested layperson. It is impossible to overstress the importance of this work as a reference manual for students of Eskimo and Aleut cultures. That this opinion is shared by many others is borne out by the fact that the first printing was sold out within weeks of publication. (Rowley 1985:714)

German anthropologist Egon Renner assessed the *Handbook* series in total, with more direct attention to some of the volumes published by 1986 (e.g., vols. 6, 8, and 10). In an elaborate essay, he discussed the theoretical approach of the *Handbook* from the perspective of a cognitive anthropologist; he saw Sturtevant as one of the forerunners of this perspective with his seminal article “Studies in Ethnoscience” (Sturtevant 1964d; Renner 1986).

Canadian anthropologist Regna Darnell reviewed the *Handbook*’s *Languages* volume (Goddard 1996c) and particularly appreciated its “sociolinguistic viewpoint, relating linguistic structure to social usage in some way” (Darnell 1999a:631). Summarizing the detailed discussion of single contributions, she viewed the volume as

an invaluable reference work, summarizing a century of ethnographic and linguistic investigation dedicated to mapping the linguistic and cultural diversity of aboriginal North America. It documents the history and present status of the linguistic and anthropological disciplines; and for readers of the other volumes of the *Handbook*, which are organized

around the concept of culture area, it clarifies that linguistics is inseparable from the study of the American Indian. (Darnell 1999a:633)

One of the last *Handbook* volumes, *Environment, Origins, and Population* (Ubelaker 2006a), was called a “wonderful up-to-date survey of the indigenous population of the Americas” (McNish 2007:134). The reviewer pointed specifically to the integration of various disciplines to deliver a well-rounded picture of the topics, even seeing it as kind of a blueprint for coming publications dealing with other continents (McNish 2007).

Since the time of my brief association with the *Handbook* production process in the spring of 1993, sitting in a visitor’s cubicle of an “immobile submarine,” the *Handbook* project moved on, despite tremendous obstacles. By 2008, it had produced 6 more volumes to make a total of 15 volumes with 16 books that are unlikely to be replaced by another work of this

magnitude in the future. The credit for this outstanding achievement is due to the dedicated staff of the Handbook office who welcomed me as a part of their team, even if for only half a year.

Acknowledgments

The author is grateful to William L. Merrill and Joanna Cohan Scherer for their many helpful suggestions and insights to this chapter. The *Handbook* staff photographs used as illustrations were taken by the author in spring 1993 and were given to Joanna Scherer when the author returned to Germany. They are currently being held by Scherer and will be deposited in the Smithsonian Institution Archives, accession 19-190 (“Joanna Cohan Scherer’s papers”), together with other *Handbook* photographs and records, after the release of this volume.

The *Handbook*: A Retrospective

IRA JACKNIS (†), WILLIAM L. MERRILL, AND JOANNA COHAN SCHERER

The *Handbook of North American Indians* (HNAI) was the most significant scholarly publication in Native North American studies produced during the late twentieth and early twenty-first centuries. From the outset of its planning in 1966, the *Handbook* was intended to be a comprehensive reference encyclopedia, aimed at a broad audience of specialists and nonspecialists, as well as Native and non-Native readers. Its fundamental goal was to challenge long-standing stereotypes and misconceptions of Native Americans, like the view that their cultures and societies were “primitive” and static, and the popular assumption that distinct Native American identities and cultural practices had for the most part disappeared.

This goal was to be achieved by documenting the diversity and complexity of Native American/First Nations societies; by exploring the dynamic sociocultural, economic, and political processes that affected and were affected by Native Americans; and by providing extensive coverage of their place in the broader societies of which they were a part. A concerted effort was made to involve Native contributors in all facets of *Handbook* production, as advisors, experts, authors, editors, and reviewers (Sturtevant 1971a:2, 1971c:6).

This chapter takes a mostly synchronic perspective on the *Handbook* series by evaluating its 15 published volumes with respect to the degree they accomplished the purpose and goals intended for the series. Of the 20 volumes originally envisioned, 15 were released over a 30-year period (1978–2008), organized in 863 chapters with more than 13,000 pages of text, almost 15,000 illustrations, and approximately 64,000 bibliographic citations (table 1). Together, they constituted an unparalleled synthesis of the knowledge of Native North America—defined ethnogeographically, from the Arctic region to the northern limits of Mesoamerica, but excluding Baja California Peninsula, which was covered in the *Handbook of Middle American Indians* (Wauchope 1964–1976)—over more than 10,000 years. The chapter concludes with an assessment of the place of the *Handbook of North American Indians* within the scholarly research and popular knowledge of Native American/First Nations cultures and societies.

Organization and Format

The 20-volume *Handbook* set was designed as three sections or groups of volumes (see “The Beginnings, 1965–1971” and “Production of the *Handbook*, 1970–2008,” this vol.). Volumes 1–4 were intended to provide continent-wide syntheses on a variety of topics related to the cultural histories of Native American peoples from the time of their earliest documented presence in the New World to the present. Volumes 5–15 were devoted to presentations of Native cultures and histories, organized by the 10 culture areas of North America. The final volumes, 16–20, were, again, topical and continental in scope, focusing on Native American technologies and art (16), languages (17), biographies (18 and 19), and a combined index for the series (20).

Of the originally planned set, volumes 1 (*Introduction*), 16 (*Technology and Visual Arts*), 18 and 19 (*Biographical Dictionary*), and 20 (*Index*) were not completed before the *Handbook* series was terminated in 2007. These unpublished volumes created gaps in the numbering within the HNAI set produced by 2008. Another anomaly was associated with the volume on the Plains area (vol. 13; DeMallie 2001a). At 1,376 pages, it was too lengthy to be bound as a single volume, so it was printed in two books designated as parts 1 and 2, with continuous pagination. The 15 numbered volumes published over the period 1978–2008 thus correspond to 16 physical books.

Shared Features and Components

All *Handbook* volumes share the same format and a number of characteristics. Each volume measures 8.75 by 11.25 inches, features large-size two-column pages, and is bound in a gray cloth cover, accented by a red band. On the front cover of each is the sunburst logo of the Smithsonian Institution, and on the back cover, the stone-axe motif used on publications from the Bureau of American Ethnology from 1881 to 1971. Most of the printed *Handbook* volumes have 800–850 pages, including illustrations, bibliography, and index.

Table 1. Handbook Components

Volume number	Volume title	Number of chapters	Total pages in volume	Number of illustrations	Pages devoted to bibliography	Estimated number of references ^a
2	<i>Indians in Contemporary Society</i> (2008)	46	591	190	101	3,757
3	<i>Environment, Origins, and Population</i> (2006)	72	1,160	873	265	9,858
4	<i>History of Indian-White Relations</i> (1988)	58	851	431	99	3,683

17	<i>Languages</i> (1996)	27	970	195	162	6,026
	Total	863	13,527	14,805	1,720	63,985

^a This estimate is based on an average of 37.2 references per bibliography page.

In addition to shared physical characteristics, all volumes contain four standard components: front matter, preface, introduction, and back matter. Each begins with a list of all 20 of the planned *Handbook* volumes, with the year of publication when applicable. The volume title and technical pages are followed by a list of the members of the volume planning committee, the table of contents, and a full-page map showing, in the case of the culture area volumes, the locations of the Native groups discussed in the text. The front matter section concludes with an explanation of the orthography adopted to represent the sounds of Native languages as well as the conventions used in the maps and in the illustration credits and captions.

The prefaces are based on a boilerplate text adapted to the specifics of individual volumes. Each preface begins with a standard section outlining the place of the volume in the series, a brief history of its production, details on the linguistic editing, and brief descriptions of the compilation of names used since European contact to identify Native American societies (called “synonymies”), and of the volume bibliography, illustrations, and other materials. All prefaces include an acknowledgments section listing individuals and institutions that contributed to the completion of the volume and the sources of funding for its preparation and publication. All of the prefaces were coauthored by the general editor, William C. Sturtevant (fig. 1), and the volume editors except for

Fig. 1. William C. Sturtevant in the Handbook office, National Museum of Natural History, January 18, 1978. The photograph was published in the *Washington Star* on April 24, 1978, and marks the only time a major newspaper published an image of Sturtevant in association with the *Handbook* project.

volume 2 (Bailey 2008a), which was published after Sturtevant's death.

The introductions were prepared by the volume editors alone or, in the case of volumes 3 (Ubelaker 2006a) and 14 (Fogelson 2004), by the editors and associate editors. Unlike the prefaces, the introductions vary in length and in the range of topics discussed, although all provide overviews of the organization and contents of their volumes.

The back matter begins with a list of contributing authors, with their academic affiliation and the dates when the chapter manuscripts were initially submitted, accepted, and sent to authors for final approval. Tribal affiliations of Native authors are given, when applicable. The final sections of the back matter are the cumulative bibliography, with full citations for all of the references cited in the volume, and the index.

Topical Volumes

The first of the four published topical volumes, *Indians in Contemporary Society* (vol. 2; Bailey 2008a), is an overview of the social, cultural, political, and economic circumstances of Native Americans and First Nations in the United States and Canada, primarily from the second half of the twentieth century to the first decade of the twenty-first. A wide range of issues and topics are discussed, including the legal status of Native Americans and First Nations communities within the two nation-states; efforts to protect Native rights, sustain Native identities, and establish Native control over land, economic resources, and cultural property; and the development of Native educational institutions and programs. Native contributions to various media—television, newspapers, theater, film, literature, music, and art—are also explored.

The next topical volume, *Environment, Origins, and Population* (vol. 3; Ubelaker 2006a), is thematically the most diverse in the series. It provides detailed information on the earliest evidence of the presence of Native peoples in North America; the relationships of Native Americans with the natural environment, including especially their exploitation of plant and animal resources; and the biological characteristics and trends of Native American populations, from the time of first European contact until the end of the twentieth century. Summaries of the history of research in each area also are included.

History of Indian-White Relations (vol. 4; Washburn 1988a) complements volume 2 by covering Native American history from the earliest encounters with European explorers and settlers until the second half of the twentieth century. While focusing primarily on the United States and Canada, it also includes in-

formation on the activities in North America of other European and Euro-American powers: Denmark, England, France, Holland, Spain, Mexico, Sweden, Russia, and the Soviet Union. The volume offers important insights into the complexities of the interactions between Native and non-Native societies during the colonial and postcolonial periods in the spheres of politics, economics, religion, and culture, as well as discussions of European and Euro-American stereotypes of Native Americans and the impact of Native Americans on non-Native cultures. It concludes with biographical sketches of 294 non-Native individuals who had a significant impact on the history of the relationships between Natives and non-Natives. These sketches were intended to complement the two volumes of Native American biographies (vols. 18 and 19), which were never produced.

The fourth published topical volume, *Languages* (vol. 17; Goddard 1996c), provides continent-wide perspectives on the Indigenous languages of North America. Its first section of 13 chapters includes general overviews of the history of linguistic research on these languages, the potential contribution of historical linguistics to understanding the long-term cultural history of Native North America, patterns of shared linguistic features across language boundaries, and the impact on Indigenous languages through the interactions among speakers of different languages (including interactions between speakers of different Native languages and between speakers of Native and European languages). These overviews are complemented by six chapters, also continental in scope, on more specific topics, such as writing systems used to represent Indigenous languages, patterns in the naming of people and places, extended speech forms like oratory and historical and mythological narratives, and the impact of sociocultural contexts on language use. The next section presents detailed "sketches" and selected vocabularies of 12 Indigenous languages. The final chapter is an inventory of sources of linguistic data on Native American languages and dialects listed in alphabetical order.

Volume 17 includes two color maps placed in a back pocket. One, compiled by Ives Goddard, is a large foldout map called "Native Languages and Language Families of North America," which illustrates the consensus classification and historical distribution of 62 Native language families and 328 Native languages as known by the 1990s. The other, called "Linguistic Stocks of American Indians North of Mexico," is a reproduction of one of the earliest such maps, prepared under the direction of John Wesley Powell of the Smithsonian's Bureau of Ethnology (Powell 1891 [1892]; Goddard 1996a:299–300).

Area Volumes

The most detailed information on the Native peoples of North America is presented in the 11 culture area volumes (vols. 5–15), which together constitute about three-quarters of the *Handbook* series (660 of 863 chapters; 9,955 of 13,527 pages, not counting this volume). Each volume provides, for its area of focus, overviews of the anthropological research conducted there, the history of its Indigenous residents before and after the arrival of Europeans, the Indigenous languages documented as spoken in the area, and descriptions of the natural environment. All area volumes also include chapters on more specific topics, such as social organization, subsistence, trade, religion, mythology, material culture, music, and selected cultural and sociopolitical developments. Although their subjects vary, these topical chapters tend to be located in the final section; in about half of the volumes, this section is explicitly labeled “Special Topics.”

The core of the culture area volumes consists of the chapters describing the cultures and histories of the more than 400 Native societies documented in North America during the postcontact period. These ethnological chapters are written according to a standard outline and tend to cover a similar range of topics, such as language, territory (accompanied by one or more maps), natural environment, prehistory, history, relations with other Native societies, and population. A separate section titled “Culture” is divided into subsections summarizing ethnographic data from various cultural domains, such as social and political organization, subsistence, material culture, and religion. Near the end of most ethnological chapters is a section titled “Synonymy,” which gives an overview of the names used to designate the tribal groups discussed in the chapters, including the names of component bands and subgroups, often as a full listing of the tribe’s constituent units. A final section provides a summary of the principal sources, both published and archival.

The majority of ethnological chapters focus on single tribal peoples or a few neighboring groups linked by language, cultural similarities, or shared histories. In a few cases, ethnological overviews of particular Native societies are presented in multiple chapters: in *Southwest* (vols. 9 and 10; Ortiz 1979, 1983), 6 chapters are devoted to the Zuni, 8 each to the Hopi and the Upper Pimans (Akimel O’odham and Tohono O’odham, formerly Pima and Papago), and 16 to the Navajo.

Figures and Tables

564 All of the *Handbook* volumes include figures and tables. Because their contents tend to be self-explanatory

(population trends, plants and animals of economic significance, linguistic forms, etc.), the tables are labeled with simple titles and, where relevant, an indication of the sources of the data they contain or key sources of related data. In contrast, the figures, which include maps, photographs, and line drawings compiled or produced for the most part by the editorial staff, are accompanied by captions with detailed commentary on their subject matter. Many of the figures are composites that incorporate multiple maps, photographs, or line drawings. A total of 850 tables and 6,367 figures appear in the 15 published *Handbook* volumes, and almost all chapters include at least one table or figure. Only 43 of the 863 chapters lack both tables and figures (see “Production of the *Handbook*, 1970–2008,” this vol.).

• MAPS The published 15 volumes include 858 maps. The number of maps in each volume varies, ranging from 112 in volume 15 (*Northeast*; Trigger 1978a) to 12 in volume 2 (*Indians in Contemporary Society*; Bailey 2008a) and 8 in volume 17 (*Languages*; Goddard 1996c). The topical volumes generally feature fewer maps than the culture area volumes. Each of the culture area volumes includes an opening map called “Key to Tribal Territories,” intended to orient readers to the location of the main groups or tribes covered in the volume. These are accompanied by detailed chapter maps, which include information on each group’s territory and occupied sites at the earliest known time period. Many chapters and all volumes feature additional maps on special topics, such as migration and trade routes, the location of archaeological sites, and the environmental history of Native North America. Of special importance are the numerous historical maps in volume 4 (Washburn 1988a) prepared by the Handbook office cartographer, Daniel Cole. Among other things, these maps cover the shifting Indian tribal areas, land transfers, and migrations; populations, treaties, and battle sites; and major government agencies, religious missions, and trading posts (fig. 2) in Indian Country. Cole’s map of American Indian lands in the United States in 1987 compiled for volume 4 (Washburn 1988a:217) was then used as a basic map by the U.S. Bureau of Indian Affairs (Cole and Sutton 2013).

Most of the maps in the *Handbook* were created specifically for the series. In many cases, they were based on new research and offered perspectives on Native North America not available elsewhere. Notably absent, however, is an overview map of Native North America consolidating the information presented in the maps of tribal territories and detailed group maps in the culture area volumes. The absence of such a map may be explained by the 1972 publication of the

Map by Daniel G. Cole, National Museum of Natural History. From Handbook volume 13, Plains (DeMallie 2001a:301).

Fig. 2. Map of Rupert's Land, Canada, 1670–1868, with trading posts founded beginning in the 1700s.

National Geographic Society's map "Indians of North America" and its several updated iterations under a slightly different title ("North American Indian Cultures," in 2004, 2011), under Sturtevant's general editorship that present the same basic information found in the *Handbook* series.

- **PHOTOGRAPHS** The 15 published *Handbook* volumes include more than 11,000 photographs, which fall into three general categories: (1) reproductions of original photographs (fig. 3); (2) photographs of items produced in other media (drawings, paintings, printed materials, and handwritten documents); and (3) photographs of archaeological and ethnographic artifacts and, in a limited number of cases, skeletal materials. All the photographs are in black and white except for 56 color images included in volume 2 (Bailey 2008a),

the last of the *Handbook* volumes to be published before the present one.

The illustrations are among the most important contributions of the *Handbook* series. Whenever possible, the staff preferred to select original art works and photographs that were unpublished, drawing upon the vast collections of the Smithsonian's National Anthropological Archives and dozens of other repositories worldwide (see "Production of the *Handbook*, 1970–2008," this vol.). In this way, the *Handbook* helped its readers visualize many diverse aspects of Native American cultures, employing images that were new to the public record.

• **DRAWINGS** Items of material culture, archaeological site features, and the organization of domestic and ceremonial spaces are the principal subjects of the 2,337 drawings, which include charts, graphs, line drawings, and diagrams. The numerous drawings of archaeological and ethnographic artifacts are

especially informative, revealing details of composition and construction techniques that are not readily discernible in photographs (Morales et al. 2003) (fig. 4). Their quality reflects the considerable time that the *Handbook* editorial staff invested in researching artifacts in Smithsonian collections and elsewhere (see "Production of the *Handbook*, 1970–2008," this vol.).

• **CAPTIONS** The figure captions were composed for the most part by the editorial staff. In addition to basic data on provenance, most of the captions provide details about the subjects presented in the figures and often considerable information not included in the associated chapter texts. This level of detail is one of the *Handbook*'s most important contributions.

In five volumes published between 1984 and 2001 (vols. 4, 7, 11, 12, and 13), a compilation of abbreviated versions of the captions is presented in a list of illustrations organized by chapter and located at the end of the volume (see "Production of the *Handbook*,

Drawing by Jo Ann Moore. NMNH Dept. of Anthropology (catalog no. 200090). From *Handbook* volume 8, *California* (Heizer 1978b:458).

Fig. 4. Drawing of Southern Valley Yokuts medicine man's headdress from Tule River Reservation, collected in 1898. Detail a, split crow feather with notched shaft; b, magpie tail feather wrapped with red wool, base of feather ornamented with mink fur, red wool, and black and white beads; c, construction of foundation, wood outer rim with continuous coil of cord to which feathers are attached; d, wood skewer to secure headdress to head.

1970–2008,” this vol.). None of the other volumes contains a comparable list of tables.

Bibliography

All *Handbook* volumes published to date feature extensive cumulative bibliographies. The rationale, format, and importance of the *Handbook* volume bibliographies are covered in individual volume prefaces (see also “Production of the *Handbook*, 1970–2008,” this vol.).

Contributors

The 15 published *Handbook* volumes were the product of the collaborative efforts of more than a thousand individuals, who contributed as authors, volume editors, associate editors, section coordinators, members of planning committees, *Handbook* editorial staff (fig. 5; see also “Production of the *Handbook*, 1970–2008,” this vol., fig. 1), contractors, and consultants. Frequently, the same individual fulfilled multiple roles. All volume editors, associate editors, and section coordinators authored chapters, as did the majority of planning committee members and several members of the editorial staff.

Volume Editors, Associate Editors, and Section Coordinators

Fourteen scholars served as editors for the 15 published *Handbook* volumes (table 2). Alfonso Ortiz (San Juan Pueblo) (fig. 6) was the only editor of the two volumes on the Southwest (Ortiz 1979, 1983), while June Helm (see “Production of the *Handbook*, 1970–2008,” this vol., fig. 2), the editor of *Subarctic* (Helm 1981), was the only woman. Three of the volume editors were employed by the Smithsonian: Ives Goddard (1996c) (fig. 5; see also “William Curtis Sturtevant, General Editor,” this vol., fig. 4), Wilcomb E. Washburn (1988a; see “Production of the *Handbook*, 1970–2008,” this vol., fig. 3), and Douglas H. Ubelaker (2006a; see “Production of the *Handbook*, 1970–2008,” this vol., fig. 9). Other editors were affiliated with various universities in the United States and in Canada.

All of the editors were established academics, mostly midcareer scholars between the ages of 45 and 55 when their volumes were produced. When the *Handbook* series was designed in the early 1970s, many were in their early or late 30s, like DeMallie, Ortiz, and Walker (fig. 7); Goddard, the youngest of all, was 28 years old. Fig. 6. Alfonso Ortiz, editor of the *Southwest* volumes, at Pecos National Historical Park, New Mexico, with ruins of the mission church in the background, 1992.

were represented to varying degrees: ethnology (or cultural anthropology) by eight editors, including Bailey, Damas, d'Azevedo, DeMallie, Fogelson, Helm, Ortiz, and Suttles (see "Production of the *Handbook*, 1970–2008," this vol., figs. 7 and 8); archaeology by three: Heizer, Trigger, and Walker; and linguistics and physical anthropology by one each: Goddard and Ubelaker, respectively. The only nonanthropologist was historian Wilcomb Washburn (1988a).

The majority of the editors had accepted their positions in 1970, during the initial planning period of the *Handbook* series (Sturtevant 1970d:1–2, 1971d). After that initial phase, however, three volumes had rather complex histories. Raymond J. DeMallie (fig. 7) became editor of the *Plains* volume (vol. 13, Parts 1

and 2) in 1983, after its original editor, William Bittle, resigned. Douglas H. Ubelaker accepted the editorship of volume 3, *Environment, Origins, and Population*, in 2002, after the volume had lacked an editor for more than a decade following the 1991 resignation of Richard I. Ford, because of delays in its publication. Ford himself was the second editor, replacing the original editor, Frederick S. Hulse, who resigned in 1982 owing to poor health. Lastly, volume 2, *Indians in Contemporary Society* (Bailey 2008a), had three different editors: D'Arcy McNickle (see "The Beginnings, 1965–1971," this vol., fig. 8), who died in 1977; Vine Deloria, Jr., who served from 1978 to 2005; and Garrick A. Bailey (fig. 7), who accepted the editorship in 2005, five months before Deloria's death

(Bailey 2008a:xi; Sturtevant and DeMallie 2001:xiii; Sturtevant and Ubelaker 2006:xi; see “Production of the *Handbook*, 1970–2008,” this vol.).

The volume editors of nine volumes were assisted in their tasks by associate editors or section coordinators (table 3). The largest volume in the series, *Environment, Origins, and Population* (Ubelaker 2006a) was divided into four major sections, each with its own associate editor. In two cases, volumes were brought to completion by an associate editor or person serving in that capacity: volume 5 (*Arctic*, editor David Damas; see “Production of the *Handbook*, 1970–2008,” fig. 4) by James VanStone (fig. 8) and volume 14 (*Southeast*, editor Raymond Fogelson) by Jason Baird Jackson (fig. 5).

The volumes with associate editors or section coordinators share certain characteristics. The editors of six out of seven such volumes were ethnologists, so archaeologists coordinated the prehistory sections. In volume 15, *Northeast*, Bruce Trigger (fig. 9), a spe-

cialist in the prehistory and ethnohistory of the Huron, served as editor, and Elisabeth Tooker, an ethnologist, coordinated several chapters on the Six Nations of the Iroquois. The position of associate editor was first created by Warren d’Azevedo (see “Production of the *Handbook*, 1970–2008,” this vol., fig. 5) for the *Great Basin* volume (d’Azevedo 1986a) and held by Catherine Fowler. None of the volumes published before 1986 had associate editors whereas four of the eight volumes published after 1986 did.

Planning Committees

The editor of each volume created a planning committee to assist in developing the structure and content for the volume, identifying potential authors, and reviewing chapter manuscripts. The volume editor and the general editor were members of all of the planning committees, joined by the associate editors and section coordinators of those volumes that had them. Series linguistic editor

Ives Goddard was a member of the planning committees of the last four *Handbook* volumes published after 2000 (vols. 2, 3, 13, and 14), when he had assumed many of the duties of the general editor (see “William Curtis Sturtevant, General Editor,” this vol.).

The planning committee of *Plateau* (vol. 12; Walker 1998) was the largest, comprising 14 members, including three Native Americans, while those of the other 14 volumes ranged from 6 to 9 members. The committees included scholars with expertise in a variety of specialties relevant to the focus of their volumes and tended to be drawn from different disciplines or subfields of anthropology, with two exceptions. The planning committee of *History of Indian–White Relations* (Washburn 1988a) included only historians, and that of *Languages* (Goddard 1996c), only linguists, besides the series general editor.

570 A total of 90 different individuals served on the final planning committees of the 15 published volumes

(98 total, if the present volume is included). Seventy-five of these individuals authored or coauthored chapters in these volumes, and 13 of them also authored biographies of non-Native people in volume 4 (Washburn 1988a).

Because of the long delays in their publication, entirely new planning committees were created for the volumes published between 2001 and 2008 (vols. 2, 3, 13, and 14), in most cases because the members of the original 1970–1971 planning committees were retired or deceased by the time new planning started. The original planning committees had included 23 individuals; of these, 7 authored or coauthored chapters and another 2 wrote or cowrote non-Native biographies.

Authors

The 863 chapters published in the *Handbook* (not counting vol. 1) were authored or coauthored by 715

top left, From *Handbook* volume 5, *Arctic* (Damas 1984). bottom left, Photograph courtesy of Douglas R. Parks. top right, Photograph courtesy of Raymond D. Fogelson.

different individuals. An additional 91 individuals authored non-Native biographical entries in volume 4 (Washburn 1988a). As one might expect, given the *Handbook's* subject matter, the majority of authors were trained in anthropology, but specialists in a number of other disciplines were also represented, including linguistics (56), history (52), and Native American, First Nations, or Indigenous studies (21). Other fields included the natural sciences, human biology, folklore, geography, sociology, economics, political science, psychology, religion, music, theater, art and art history, education, journalism, public health, medicine, and law. Most authors were affiliated with universities, but many worked in other institutional settings, such as museums, archives, libraries, historical societies, government agencies, cultural resource management firms, and Native organizations.

Eight members of the *Handbook* editorial staff figured among the 715 contributors, authoring or coauthoring 21 chapters in eight volumes (including the present one). The most prolific of the *Handbook* staff authors was Ives Goddard, the sole author of nine chapters and coauthor of three others. Artifact researcher E.S. Lohse

McGill University Archives (MG4259).

and assistant illustrations researcher Frances Sundt co-authored one chapter (Lohse and Sundt 1990; see also Lohse 1988; Lohse and Sprague 1998). Other staff members who contributed chapters were Patricia Afable (Afable and Beeler 1996), Cesare Marino (Cook 571

and Marino 1988; Marino 1990), Joanna C. Scherer (“Production of the *Handbook*, 1970–2008,” this vol.), and William Sturtevant (Jackson et al. 2004; Sturtevant 1978; Sturtevant and Cattelino 2004). In addition, in the course of their work on the *Handbook*, many staff members conducted original research and published the results in other venues. These include studies of languages and linguistic research in the Southeast (Goddard 2005a; Sturtevant 2005), Native American ethnonyms (Goddard 1984), the cartography of Native North America (Cole and Sutton 2013, 2014), and the contributions of photography to Native American research (Scherer 1981a, 1981b, 1988, 1990, 1998b, 1999, 2006, 2014).

In the 15 published volumes, about 80 percent of the authors were affiliated with institutions or organizations in the United States (570 of the 715 authors) and another 17 percent (121 of 715) with Canadian institutions or organizations. One Native Greenlander (Kalaalleq) and four Danes contributed chapters on Greenland in *Arctic* (vol. 5; Damas 1984). Even though Siberia and former Russian territories in western North America were included in the geographical coverage of the *Handbook* series, no scholars affiliated with Soviet or Russian institutions or organizations were included among the authors, perhaps because the relevant volumes were prepared before the collapse of the former Soviet Union in 1991. Similarly, although northern Mexico was included in the Southwest culture area (vol. 10; Ortiz 1983), no Mexican scholars authored or coauthored any chapters. This absence reflected in part the limited number of Mexican scholars who were conducting research in the region at the time.

Native American Participation in the Handbook Project

Native American scholars contributed significantly to the *Handbook* as volume editors, members of planning committees, and chapter authors. Alfonso Ortiz (San Juan Pueblo) edited the two *Southwest* volumes (Ortiz 1979, 1983), and two prominent Native American scholar-activists—D’Arcy McNickle (enrolled Salish-Kootenai) and Vine Deloria, Jr. (Standing Rock Sioux)—served successively as editors for *Indians in Contemporary Society* in 1970–1977 and 1978–2005, respectively (Bailey 2008a:xi).

The idea of devoting an entire volume to the role of Native Americans in contemporary society had not been considered before the November 1970 meeting of the *Handbook*’s General Advisory Board, of which McNickle was one of four members (Sturtevant 1970d:1; see “The Beginnings, 1965–1971” and “William Curtis Sturtevant, General Editor,” this vol.).

McNickle volunteered to edit the volume and quickly assembled a planning committee that included Deloria, Roger Buffalohead (Ponca), and Robert K. Thomas (Cherokee), as well as five non-Native scholars with expertise in contemporary Native affairs. In the summer of 1971, McNickle began inviting scholars to contribute chapters (Bailey 2008a:xi; Stanley 1971a). By August 1977, manuscripts of 17 of the planned 68 chapters had been submitted (Della-Loggia 1977b), but soon after, McNickle died, and Deloria replaced him the following year.

Under Deloria’s editorship, the number of chapters planned for the volume expanded to 87, and by 1983, manuscripts of 67 of these were on hand (Della-Loggia 1983), but the *Handbook* editorial office then focused on the production of other volumes. The work did not resume until 2005, at which point Deloria stepped down. Oklahoma-based anthropologist Garrick A. Bailey took the lead on completing the volume with a new planning committee that included three Native scholars—JoAllyn Archambault (Standing Rock Sioux), Eva Marie Garrouette (Cherokee), and Robert Warrior (Osage)—among its nine members. Of the 50 contributors to volume 2, 24 Native, First Nations, or Inuit scholars served as authors or coauthors (Bailey 2008a:xi–xiii, 446–447).

The planning committees of five of the other published volumes included Native American scholars: McNickle for volume 4 (*History of Indian–White Relations*; Washburn 1988a); Edward D. Castillo (Luiseño-Cahuilla) and Jack D. Forbes (Powhatan-Renapé/Delaware-Lenape) for volume 8 (*California*; Heizer 1978b); Edward P. Dozier (Santa Clara Pueblo) and Alfonso Ortiz (San Juan Pueblo) for volume 9 (*Southwest*; Ortiz 1979); and Virginia Beavert (Yakama), Ronald Halfmoon (Umatilla-Nez Perce), and Allen R. Slickpoo, Sr. (Nez Perce) for volume 12 (*Plateau*; Walker 1998). In the latter, volume editor Deward E. Walker, Jr., also acknowledged the assistance provided by 41 Native individuals, affiliated with about a third of the tribes covered in the volume (Sturtevant and Walker 1998:xvi). Native Americans also participated in the original planning committees for two other volumes: Beatrice Medicine (Standing Rock Sioux) for volume 13 (*Plains*) and Robert K. Thomas (Cherokee) for volume 14 (*Southeast*), although the final planning committees for these volumes did not include any Native American members.

Native American authors contributed chapters to 11 of the 15 published volumes (as well as to the present one). The number of Native Americans who authored or coauthored chapters varied considerably among the volumes, from 24 (out of a total of 50) in volume 2 (Bailey 2008a) to none in volumes

6, 15, and 17. In all cases, special efforts were made to recruit as many prospective Native American and First Nations contributors as possible. Ten of the 49 Native authors wrote or cowrote multiple chapters: Robert Petersen (Kalaalliq/West Greenland) contributed four chapters; JoAllyn Archambault, Clara Sue Kidwell (Choctaw-Chippewa), and Alfonso Ortiz, three chapters each; and Edmund J. Ladd (Zuni), Joe S. Sando (Jemez Pueblo), Russell Thornton (Cherokee), and Rosita Worl (Tlingit), two chapters each. Several chapters written by Native Americans were specifically designed to provide Native perspectives on certain topics: origins (Archambault 2006), Sun Dance (Archambault 2001), governance (Johnson 1986; Pablo 1983), and relations between Indigenous and non-Indigenous people and traditions (Tome 1983), as well as several topics covered in volume 2 (Bailey 2008a).

Despite the extent of their contributions, Native Americans constituted only a small fraction of the individuals who participated in the *Handbook* project. Altogether, 58 Native American scholars contributed to the *Handbook* series (not counting this volume) representing slightly less than 8 percent of the total of 745 individuals who served as volume editors, chapter authors, or members of planning committees. The 60 chapters authored or coauthored by Native scholars represent less than 7 percent of the total of 863 chapters, not counting the present volume.

The limited number of Native American contributors in certain *Handbook* volumes reflected the status of the field in the 1970s and 1980s. Increasing Native authorship was a persistent goal throughout the production of the *Handbook* series, articulated since its very inception (Sturtevant 1971a, 1971c, 1971f). As the years went on, more Indigenous people pursued higher education, obtained advanced degrees, and served as chapter authors. Native participation was highest in volume 2 (Bailey 2008a), the last volume to be published, reflecting this trend and the subject matter of the volume.

The Time Frame of the *Handbook*'s Production

The intermittent publication of 15 volumes of the *Handbook* series over the course of 30 years (1978–2008) resulted from the interplay of multiple factors, including delays in the submission, review, revision, and approval of chapter manuscripts and the limited number of editorial staff available to prepare the volumes for publication (see “Production of the *Handbook*, 1970–2008,” this vol.). The original 1971 plan for the *Handbook* envisioned publishing the entire 20-volume series in 1976 as part of the Smithsonian's

contribution to the commemoration of the bicentennial of the American Revolution (see “The Beginnings, 1965–1971,” this vol.). Yet by the end of 1973, members of the *Handbook*'s production staff realized that this goal would be impossible to achieve and decided to focus on the two volumes—*California* (vol. 8) and *Northeast* (vol. 15)—with the highest number of manuscripts accepted by their editors. This decision laid the foundation for the development of a sequential, volume-by-volume production strategy that was adopted for all subsequent volumes. By 1981, it was clear that the sequential publication strategy was a viable approach, but its adoption had negative consequences on the rate of production of the series as a whole.

Nine *Handbook* volumes were published between 1978 and 1990, an average of one volume every 1.3 years, but then the rate of publication slowed. Although the editors of two culture area volumes, *Plains* (vol. 13) and *Plateau* (vol. 12), had begun preparing them for publication in 1985 (Sturtevant and DeMallie 2001:xiii; Sturtevant and Walker 1998:xiv), these volumes required several years to complete (DeMallie 2001a; Walker 1998). In the interim, another topical volume was published (*Languages*; Goddard 1996c).

The production of two other volumes—*Southeast* (vol. 14; Fogelson 2004) and *Environment, Origins, and Population* (vol. 3; Ubelaker 2006a)—began in 2000 and 2002, respectively. Both volumes required extensive re-planning, as well as the recruitment of new authors and the addition of associate volume editors.

In April 2005, David Evans, the Smithsonian under secretary for science, informed Cristián Samper, director of the National Museum of Natural History, that funding for the *Handbook* would be terminated in 2007 (Evans 2005; see “Production of the *Handbook*, 1970–2008,” this vol.). The establishment of a deadline, December 2007, precipitated efforts to finish the two remaining topical volumes: *Indians in Contemporary Society* (vol. 2; Bailey 2008a) and *Technology and Visual Arts* (vol. 16) (Rogers 2005b; Sturtevant and Ubelaker 2006:xi–xii). Work began on both volumes in 2005 (Bailey 2008c:xi–xiii; Feest 2005). Production work on volume 2 was completed by the end of August 2007, but the book was not published until July 2008—some former *Handbook* staff members volunteered their continued assistance to the volume editor to help complete it (see “Production of the *Handbook*, 1970–2008,” this vol.), while volume 16 was never completed (Anonymous 2016).

Handbook Volumes Not Produced

When the *Handbook* project ended in 2007–2008, 5 of the 20 volumes planned for the series remained to

Photograph by M. Schuyler Litten.

be produced: *Introduction* (vol. 1), *Technology and Visual Arts* (vol. 16), *Biographical Dictionary* (vols. 18 and 19), and *Index* (vol. 20). The failure to complete these volumes was unfortunate because they formed part of a comprehensive plan for the series and were designed to provide data and perspectives not included in any of the other volumes.

The history of the work on this *Introduction* volume, edited by Igor Krupnik (fig. 10), is presented elsewhere (see “Preface” and “Introduction: A Gateway to the *Handbook* Series,” this vol.). The following sections present an overview of the efforts to produce the other unpublished volumes.

Technology and Visual Arts

By the time the *Handbook* was being planned, American anthropology had long moved away from its earlier institutional setting in government agencies and museums and from its focus on material culture (e.g., Bunzel 1929; Ewers 1939; Hinsley 1981; Hodge 1907–1910; Wissler 1914, 1917). The *Handbook*, however, was envisioned to include an entire volume on technology and the visual arts, reflecting the personal scholarly interests of its general editor as well as the institutional sponsorship of the Smithsonian (see “William Curtis Sturtevant, General Editor,” this vol.).

This volume was intended to provide a systematic, continent-wide survey of the material culture of Na-

tive North America throughout the entire history of its occupation by Indigenous people, as documented in the archaeological, ethnographic, and historical record. The range of categories of material culture to be included was comprehensive, and techniques of manufacture as well as the finished products were to be considered. The volume was expected to be of particular interest to museum-based scholars and archaeologists, Native and non-Native artists and craftspeople, Indian hobbyists (see Powers 1988; Taylor 1988), and collectors. About a third of its pages were to be devoted to illustrations, compared with about a fifth of the other *Handbook* volumes (Sturtevant 1971b:8, 1972a; see “Production of the *Handbook*, 1970–2008,” this vol.).

Sturtevant, who was to serve as the volume editor, was an especially appropriate person to organize and lead this important work because he was one of the few cultural anthropologists at the time who considered material culture to be an important focus of anthropological inquiry, and he had already published extensively on this subject (Sturtevant 1956a, 1964a, 1965b, 1967b, 1967d, 1968a, 1969b). The planning of the volume was delayed until 1972, when Sturtevant created a planning committee that met in Washington on July 29–30 of that year. In preparation for the meeting, Sturtevant drafted a preliminary outline and compiled “Lists of Material Culture Categories” to help the committee determine the topics to be covered in the volume. He also identified potential authors for many of the chapters that he proposed (Sturtevant 1972a, 1972d, 1972e). A year later, in June 1973, he compiled a revised version of this outline, a list of potential contributors, and invited authors for its 91 planned chapters (Peratino 1975:2–3; Sturtevant 1973b). Yet, ten years later, the *Handbook* office had received a manuscript for only one chapter: “Musical Instruments” by Richard J. Haeffer (Della-Loggia 1983; Sturtevant 1973b).

In 1975, a Smithsonian audit concluded that the demands of serving as the *Handbook*'s general editor left Sturtevant little time to work on the *Technology and Visual Arts* volume and recommended that a new editor be appointed (Peratino 1975:2; see “Production of the *Handbook*, 1970–2008,” this vol.). A replacement was not designated, however, until 1988, when Christian F. Feest from the Museum für Völkerkunde in Vienna agreed to assume the role (Feest 2005; Sturtevant 1988). Feest was one of the leading North Americanist anthropologists in Europe and a specialist in Native American material culture studies. He also contributed five chapters to other *Handbook* volumes (Feest 1978a, 1978b, 1978c, 1988; J.E. Feest and C.F. Feest 1978).

In 2004, Feest agreed to resume work on the volume. In April 2005, when the decision to terminate the

Handbook series was announced, the need to complete *Technology and Visual Arts* became urgent. In July 2005, Feest was contracted by the Smithsonian to coordinate the completion of the volume, overseeing the work of a team of researchers based in Frankfurt and Vienna who, along with him, would prepare chapters for the volume.

Feest created a new outline, which included 111 chapters, and began identifying authors. The volume was scheduled for completion by August 2007, but this deadline was not met. In 2006 and 2007, manuscripts for only 39 chapters were submitted to Feest, who compiled illustrations for 11 of these chapters as well as for 14 other chapters for which manuscripts were not submitted (Feest 2005). No additional work was completed, and the Smithsonian terminated the contract in December 2011 (Anonymous 2016; Arnoldi 2011).

Had it been published, the volume would have had a significant impact. By 2000, the once dominant anthropological focus on material culture had been largely superseded by an aesthetic approach fostered by collectors and art museums (cf. Berlo and Phillips 1998; Feest 1980, 1992; Penney 2004). There is relatively little ongoing research, at least by ethnologists, on functional Native American crafts and technologies. While it would have been complicated and expensive to produce, *Technology and Visual Arts* would likely have been, as its planners envisaged, one of the set's best-selling volumes, given its intrinsic appeal to a large and diverse international audience (Kelley 1999:3).

Biographical Dictionary

The two-volume *Biographical Dictionary* (vols. 18 and 19) was an expression of contemporary disciplinary trends during the time the *Handbook* was planned. During the 1960s and 1970s, following a tradition of Native life histories and autobiographies, cultural anthropologists began to compile longer biographies of Native Americans (see "Writing American Indian Histories in the Twenty-First Century," this vol.). Sturtevant himself played an important role in this trend with his published biography of his Seminole consultant Josie Billie (Sturtevant 1960b) and his collaboration with Margot Liberty in the collection of essays *American Indian Intellectuals* (Liberty 1978).

The two volumes to be devoted to brief biographies of Native American people were initially to contain 1,500 individual sketches; by 1973, the number had increased to 2,000 (Sturtevant 1971c:8, 1973a). The decision to produce this *Biographical Dictionary* was motivated in part by the fact that biographical sketches were included in the original BAE *Handbook* (Hodge

1907–1910), but also by the goal of representing Native Americans as individuals rather than simply as the members of "tribes." The biographies were intended to cover

an assortment of personalities, Indian people who engaged in a variety of activities, the infamous as well as the famous, both men and women from as many tribes as possible: artists, warriors, craftsmen, statesmen, politicians, actors, priests, curers, writers, travellers, sportsmen, prophets—in short, anyone from the recent or distant past who is likely to be looked up in a reference book in the future. (Sturtevant 1971f:8)

In the mid-1960s, when the *Handbook* project was launched, no comparable compilation of Native American biographies existed, except for a few popular accounts (Gridley 1936; Snodgrass 1968). Work on the *Biographical Dictionary* began in 1966, soon after the *Handbook* project was initiated. An index file of potential Native American individuals to be included was created, and people and organizations active in Indian research, politics, governance, and arts were contacted. In 1971, a preliminary list of names was mailed to about 2,000 people, including to many Native American tribes, requesting their input; contributors to the *Handbook* were also asked to provide suggestions of individuals to be considered (Stanley 1971b; Sturtevant 1967e, 1971a). All names were incorporated into the large index file to be developed into the final list of subjects (Smithsonian Institution 1972b:248).

By 1973, this process had been largely completed (Sturtevant 1973a). Plans were in place to invite authors to write the biographies of the selected Native individuals, but this stage of the project never took place because the *Handbook* staff focused on producing other volumes. Nonetheless, work on the *Biographical Dictionary* continued throughout the remainder of the *Handbook* project. Cesare Marino, who joined the *Handbook* editorial staff in 1983, incorporated the information from the original index file and other sources into a customized electronic database, identifying personal photographs, and compiling a basic bibliography of about 500 citations (Marino, personal communication, May 2017). In 2005, however, when the decision was made to terminate the *Handbook*, the *Biographical Dictionary* was not identified as a priority for completion. Completing it would have been a daunting task. By 2005, the number of Native individuals to be considered had increased to about 5,000, and the consolidated citations for their biographies would number between 20,000 and 24,000 entries, requiring a separate bibliographic volume (Marino, personal communication, April 2017).

The need for the *Biographical Dictionary* had also diminished because several similar compilations had been published since the 1970s (Bataille and Lisa 2001; Champagne 2001; Gridley 1972, 1974; Johansen and Grinde 1998; Lester 1995; Reno 1995; Waldman 1990). Nonetheless, within the framework of the *Handbook* series, the failure to produce the *Biographical Dictionary* was incongruous given the inclusion of biographical sketches of 294 non-Native individuals in volume 4 (Washburn 1988a:617–699).

Another quasi-biographical component proposed in the original plan for the *Handbook* but never realized was a section to be included in each culture area volume titled “The Human Sources of Ethnography.” It was to list the principal Native American experts consulted by ethnographers and linguists in research completed in the past, accompanied by basic biographical information about them. These sections were designed

to give credit to those authorities so often overlooked in the past; to give credit to key informants where the description is based on unpublished fieldwork; to allow the descendants of informants and other modern members of the societies described to identify the individual sources of the (often rather abstract) published data; [and] to give a better indication of the time depth of the first-hand experience recorded in the ethnographic literature (Sturtevant 1971a:14).

In the early 1970s, Robert F. Heizer (see “The Beginnings, 1965–1971,” this vol., fig. 9; *California* [Heizer, 1978b:fig. 1]), the editor of volume 8, *California*, cowrote a simplified version of such a section, based on data compiled in the 1950s to support legal claims of Native people to territory and resources in California (Heizer and Nissen 1973). When published, however, neither volume 8 nor any of the other *Handbook* volumes included such a section.

Index

Sturtevant was also the designated editor for the last of the planned volumes in the set, *Index* (vol. 20). In addition to providing a unified index to the entire series, volume 20 was to include a guide to the use of the *Handbook*, a glossary of technical terms unfamiliar to nonspecialists, and a list of errata that identified and corrected the errors encountered in the other volumes following their publication (Sturtevant 1971f:8; Sturtevant and Ortiz 1979:xiii).

Work on this last volume was anticipated to begin when the full series was completed, but this work evidently never started in earnest. When the termination of *Handbook* production was announced in 2005, no

effort was made to plan, much less to complete the *Index* volume.

The Impact and Legacy of the *Handbook*

Distribution

The *Handbook* was intended to reach a large and varied audience. As Sturtevant noted, “It is expected that this will be a Smithsonian publication so that distribution will be broader and prices lower than would be possible with commercial publication” (1971f:6). Although officially published by the Smithsonian Institution, not the Smithsonian Institution Press (succeeded by the Smithsonian Institution Scholarly Press), the latter has always distributed it, along with the Government Printing Office (GPO, now the Government Publishing Office), which supervised the actual printing (see “Production of the *Handbook*, 1970–2008,” this vol.).

Over a thousand copies of the *Handbook* were distributed to libraries, museums, governments, and other entities free of charge, as a government publication. The GPO Depository Library Program distributed a copy of each *Handbook* volume to some 1,190 selected federal depository libraries located throughout the United States. In fact, the GPO made the *Handbook* a “core” holding, recommending it as essential to every library (Kelley 1999). Numerous libraries outside the United States received free copies through the International Exchange Program of the Library of Congress. As of 2018, some or all of the published *Handbook* volumes were included in the collections of more than 2,100 libraries around the world (<https://www.worldcat.org/>; see “Introduction: A Gateway to the *Handbook* Series,” this vol.).

The *Handbook*’s editorial office also kept a stock of individual chapter offprints (up to 1996) for its own distribution to authors, reviewers, partner universities, and colleagues worldwide. For each *Handbook* volume, there was an extensive list of gift copies. Sturtevant was especially committed to sending free copies to Native American contributors, tribal offices, Native American studies programs at tribal colleges, and other institutions. This distribution continued through the Smithsonian Department of Anthropology after the *Handbook* office was closed.

In addition to serial acquisition by libraries, volumes were purchased separately. The purchase price set by the GPO has always been reasonable for such valuable books. By 1983, the GPO had sold almost 50,000 of the first four series volumes, including

17,665 copies of *California* (Heizer 1978b), 15,166 copies of *Northeast* (Trigger 1978a), and 11,312 copies of the first *Southwest* volume (Della-Loggia 1983). By 1993, the number of copies sold increased to 112,000, not counting those distributed as gifts (see “Production of the *Handbook*, 1970–2008,” this vol.). Although final sales figures are not available, it is reasonable to estimate that some 150,000 copies of the 15 printed volumes were sold or distributed free over the course of the *Handbook* project. Nothing like this would have been possible from commercial publishers. The GPO had committed to keeping all *Handbook* volumes in print (Kelley 1999). As stock was depleted, several volumes were reprinted, though without updates. Today, most of the volumes are still in print and available from either the GPO or the Smithsonian Institution Scholarly Press.

The *Handbook* attempted to appeal to a diverse, educated audience. In guidelines to the authors prepared in 1971, Sturtevant described this large and varied audience as follows:

[The *Handbook*] should become a standard reference encyclopedia, for university teachers and students and for research workers and writers in the social sciences and humanities, but also for the general public, including particularly Indian people and those whose jobs or interests relate them to some phase of Indian life and culture. The *Handbook* articles will be encyclopedic in content and style: concise, exhaustive, accurate, and written for the educated general reader as well as for specialists. (Sturtevant 1971f:5)

The vast majority of the chapters achieve this objective, although a familiarity with the concepts and terminology of anthropology and related disciplines is necessary to understand portions of certain chapters. To address this problem, a glossary of technical terms was to be included in the final volume of the series, the *Index*, which was never published.

Contributions to Scholarship

Like other scholarly publications, copies of the *Handbook* volumes were sent to journals for review. Perhaps the best way to gain an appreciation of the *Handbook*'s achievement and to assess its impact is to review its many reviews. Over the decades, more than 120 reviews of the *Handbook* appeared in print, most in scholarly journals (table 4) but some in library journals and the popular press. These ranged from general and more specialized anthropological journals (e.g., *American Anthropologist*, *Man*, *L'Homme*, *American Antiquity*, *Ethnohistory*, *Anthropological Linguistics*) and from regional publications (e.g., *Journal*

of California Anthropology, *BC Studies*, *Études/Inuit/Studies*) to periodicals outside of anthropology (*American Indian Culture and Research Journal*, *Journal of American History*, *Word*). These reviews also reveal the international impact of the *Handbook*, as many came from Austria, Czechoslovakia (now the Czech Republic), France, Germany, Russia, the United Kingdom, and other countries.

One of the first reviews, of the California volume, was written by French anthropologist Claude Lévi-Strauss (1979), who had been an inspiration for the entire *Handbook* project (see “The Beginnings, 1965–1971” and “Organization and Operation,” this vol.; see also “William Curtis Sturtevant, General Editor,” this vol., fig. 5). He later reviewed the *Plains* volume (Lévi-Strauss 2002). While most reviews were devoted to single volumes, a few combined reviews (e.g., Renner 1986) and several review essays (e.g., Albers 1988; Clemmer 1981; Krech 1984a; Merrell 1991; Ray and Roberts 1985) also appeared.

As individual volumes appeared, reviewers compared them, often systematically (Désveaux 1983, 1985, 1986, 1987, 1990, 1997, 2002, 2005) with those already published. On the whole, the reviews were positive. Even the most critical acknowledged the hard work and valuable information that went into the volumes. With few exceptions, reviews praised the illustrations and bibliographies.

In a publication of this scale, it was inevitable that the chapters would be uneven in coverage and quality (Goodfellow 1991/1992:185; Jennings 1979:492; Ray and Roberts 1985:271). While most reviewers found the *Handbook* style clear and accessible, occasionally they found the prose too esoteric and technical (Goodfellow 1991/1992:185; Levi 2003:84–85; Weslager 1979), particularly in the grammatical sketches included in *Languages* (vol. 17), which require a fairly advanced understanding of descriptive linguistics.

One of the most consistent critiques, especially in the earlier years, was that the scholarship was often out of date (e.g., Krech 1984a). As time went on, however, opportunities arose to update and revise the manuscripts. Volume editors decided not to publish the chapters as originally submitted but either to have them revised or to commission entirely new ones. The net effect was that the volumes gradually became representative of more recent trends in scholarship. If the entire set had been published in 1976, as originally envisioned, it would have remained locked into the anthropology of that moment. The two volumes that benefited the most from such delay were the last two published—*Environment, Origins, and Populations* (Ubelaker 2006a) and *Indians in Contemporary*

Table 4. Handbook Reviews per Volume

<i>Volume (publication year)</i>	<i>Total reviews</i>	<i>Citations</i>
<i>California</i> (1978)	12	Areni 1978; Sanders 1978; Rawls 1978; Costo 1979; Sheehy 1979; Glassow 1979; Lévi-Strauss 1979 (French); Moratto 1979; Phillips 1980; Clemmer 1981; Jackson 1981; Clemmer 1983
<i>Northeast</i> (1978)	10	Jennings 1979; Mathews 1979; Weslager 1979; Hamell 1980; Kawashima 1980; Kent 1980; McNab 1980; Vaughan 1980; Haan 1982; Dickinson 1983 (French)

<i>Indians in Contemporary Society</i> (2008)	3	Fixico 2009; Wanser 2009; Watkins 2009
Multiple volumes	5	Jelínek 1981 (<i>California</i> and <i>Northeast</i>); Morrison 1984 (<i>Southwest</i> , vols. 9–10); New 1986 (<i>Subarctic</i> , <i>Arctic</i> , and <i>Northeast</i>); Renner 1986 (<i>Subarctic</i> , <i>California</i> , <i>Southwest</i> [1983]); Renner 1998 (<i>Languages</i> and partial reviews of <i>History of Indian–White Relations</i> , <i>Arctic</i> , <i>Subarctic</i> , <i>Northwest Coast</i> , <i>California</i> , <i>Southwest</i> [1979], <i>Southwest</i> [1983], <i>Great Basin</i> , and <i>Northeast</i>)

Table compiled by William Merrill, Joanna Cohan Scherer, Hannah Toombs, and Emily Solomon with additions by Ira Jacknis, Igor Krupnik, and Cesare Marino.

Society (Bailey 2008a)—perhaps for different reasons. Despite their divergence in temporal focus—the former in the past and the latter in the present—each reflected substantial changes in contemporary scholarship.

As an expression of a social science discipline, the *Handbook* was evaluated by several reviewers for its theoretical approaches. Some reviewers were bothered by what they believed was cultural objectification (Miller 1991–1992; Wishart 2002), while others criticized the lack of cutting-edge anthropological theory (e.g., Clemmer 1981, 1983; Harkin 1992:175; Hunter-Anderson 1983; Wickwire 1999:86). They argued not that there was no theory in the *Handbook* but that the theory was outdated: a generalized descriptive functionalism, suitable to the discipline in the 1940s or 1950s. Yet Sturtevant, as general editor, was adamant that the *Handbook* needed to be somewhat conservative:

This is to be a reference encyclopedia, not a collection of professional essays. Thus while professional standards of theory and method, and of accuracy, should be maintained, extensive discussions of specialized intradisciplinary issues should be avoided. A particular effort should be made to provide a complete and well-balanced summary of one's topic, suitable for those with little or no prior knowledge of the subject (Sturtevant 1971a:2).

Coverage

The *Handbook* project made a continual effort to cover all of North America. Though some reviewers complained about the relative neglect of Canada in a few volumes that crossed borders, such as *Plateau* (Matsui and Ray 2000:681) and *Plains* (J.R. Miller 2003), or made similar points regarding northern Mexico in the *Southwest* volumes (Riley 1985; Schwerin 1985:605–606), all attempts were made to make the *Handbook* as inclusive and comprehensive as possible. This was particularly the case in the transnational volumes 5 (*Arctic*; Damas 1984), 6 (*Subarctic*; Helm 1981), 7 (*Northwest Coast*; Suttles 1990), and 15 (*Northeast*; Trigger 1978a).

For a publication series organized primarily by culture areas, an anthropological construct of the early twentieth century (see “Antecedents of the Smithsonian *Handbook* Project,” this vol.), it was perhaps not surprising that the culture area concept itself would come under criticism in the reviews (e.g., Albers 1988:281; Matsui and Ray 2000). Culture area definitions were felt to be inevitably arbitrary. Making matters worse, the relations between cultures, languages, and tribal identities change over time, and

the documentary material at hand might not always be comparable and up to date. However, as many volume editors pointed out, the culture area boundaries were a kind of classificatory heuristic that, while oversimplifying reality, were readily understandable for a general audience. Moreover, one of the *Handbook's* scholarly innovations was its historical perspective. Sturtevant announced that, in contrast to most Americanist anthropology up to that time, the series would have no fictive “ethnographic present” (1971a:5). This perspective reflected not only a discipline-wide shift (Burton 1988) but also Sturtevant's personal interest in ethnohistory (Sturtevant 1966a). His concern for the new field of the history of anthropology was evident in each volume's overview of previous scholarship (Sturtevant 1982).

An expression of this historicist stance was the series' approach to culture-contact and acculturation. Sturtevant insisted:

Authors should bear in mind the current tendency . . . to examine Indian societies in the larger context—not to isolate them artificially, for purposes of analysis, from the Euroamerican societies that overwhelmed and surround them. Thus in the culture-historical sections the methods and effects of this domination should be faced directly rather than avoided or skimmed. (Sturtevant 1971a:11)

Still, an operational use of the “ethnographic present” was employed for a range of cultural domains. Cultures were commonly described in a firmly dated past, based on the available ethnographic sources. As a consequence, most of these cultural descriptions were still in the past—that is, the late nineteenth and early twentieth centuries. Later developments, from the twentieth century, tended to come in a “history” section, and the most recent years got short shrift. Often culture and history were described as if they were two different things (Albers 1988:281), although this differed in different volumes depending on the data available.

Several reviews noted the general lack of a Native perspective, especially in the historical chapters (Harkin 1992; Jorgenson 1990; Merrell 1991). There was clearly an emphasis on the “White” side of Indian-White relations (Washburn 1988b:1). More attempts could have been made to emphasize Native actions and agency, as reflected in what has come to be called the New Indian history (Hoxie 2016; see “Writing American Indian Histories in the Twenty-First Century,” this vol.). The *Handbook* certainly could have done more to present a Native perspective.

One aim of the *Handbook* was to acknowledge gaps in knowledge and offer suggestions for future

research. As one volume editor wrote: “In some cases the gaps [in our understanding] appear irremediable, but it is hoped that the publication may encourage research along hitherto neglected lines” (Trigger 1978b:3). Lack of data was pointedly highlighted by the blank spaces in the *Handbook* language map (Goddard 1996e) and in several chapter and volume maps. The *Handbook* made the effort to be as comprehensive and definitive as possible, even when it sometimes fell short of its goals.

The Legacy of the Handbook

Although no one could have foreseen it when the *HNAI* series was planned in the 1960s and 1970s, it had the misfortune to appear during the transition between print and digital publication, which began in the mid-1990s. Many readers in the twenty-first century have little interest in making an effort to locate and consult a physically cumbersome set of 16 large-size books of five to six pounds each, invariably located in libraries, rather than access them online. Many reference works conceived at the same time as the *Handbook* are now available both in print and online (*The Journals of the Lewis and Clark Expedition*, for instance, are online; see Moulton 1983–2001; <https://lewisandclarkjournals.unl.edu>, active December 30, 2020).

Although there is no technical reason why the *Handbook* set could not be digitized, the main stumbling block is the lack of permissions to reproduce the thousands of illustrations from myriad repositories worldwide. In addition, digitizing all of this content would be a massive and expensive undertaking. Nevertheless, the *Handbook* volumes are cited in numerous online sources, including, perhaps most notably, Wikipedia, where it appears in more than 100 articles (see https://en.wikipedia.org/wiki/Handbook_of_North_American_Indians). The *Handbook* has also found its way, often uncredited, into numerous print and online publications, agency reports, legal and repatriation decisions, and educational materials.

If the *Handbook* were produced in today’s publishing world (as is this introductory volume), not only would its text and images be presented online, but it could include all kinds of multimedia files—such as moving images and sound files for language, music, and performance—all of which could be digitized and linked. A digital format would also have eased the process of making revisions and adding supplements. Several reviewers (Mathews 1979:76; Renner 1998:44) suggested the publication of periodic updates, on the model of the *Handbook of Middle American Indians* (Wauchope 1964–1976), with its several

580

Sabloff 1981; Spores 1986). While creating supplements was clearly beyond the vision of the Smithsonian, the present volume 1, *Introduction*, does serve as a kind of update.

The *Handbook*’s original purpose and goal were to “summarize scholarly knowledge of the history and the cultures of all North American Indians and Eskimos” (Sturtevant 1971f:5), but it is much more than a mere summary. In many cases, it presents the results of original research and analysis never previously published, and it provides new syntheses of data, detailed maps, synonymies of tribal and place names, illustrations, and summaries of research sources not available elsewhere.

No study has been done on how the *Handbook* has been and continues to be used. The common impression is that the *Handbook* has become what it set out to be: the principal reference work on Native North America for both specialists and nonspecialists. Anecdotal evidence suggests that scholars, students, educators, tribal and agency researchers, and museum and heritage professionals tend to use the volumes as a first step in familiarizing themselves with aspects of Native American cultures that lie beyond their personal expertise (fig. 11).

Conclusion

From the outset, William Sturtevant was conscious of the *Handbook*’s likely place in history: “This will probably be a standard reference work for many decades, perhaps half a century” (Sturtevant 1971a:2). Fittingly, the *Handbook* has become the culminating monument in the Americanist tradition of anthropology, going back at least to the founding of the Bureau of Ethnology in 1879. This tradition of scholarship privileged survey and mapping, history, language, and the Native point of view (Darnell 1998, 2001; Hinsley 1981; Valentine and Darnell 1998). More specifically, the *Handbook*’s maps can be traced back to John Wesley Powell’s famous map of American Indian languages (Powell 1891); the synonymies of tribal names to the efforts of James Mooney and his colleagues, embedded in the original *BAE Handbook* (Hodge 1907–1910); and the listing of sources and bibliographies to the early research of Bureau clerk James C. Pilling (1881, 1895). The emphasis on historical photographs goes back to the original Smithsonian explorations in Native American imagery that started in the mid- to late 1800s (Fleming 2003; Jackson 1877; Shindler 1869).

The *Handbook* was conceived at a time when anthropology and history were building new bridges, and

Fig. 11. Nick Estes (Lower Brule Sioux) using a *Handbook* volume in his research as a doctoral candidate in American Studies, University of New Mexico. He received his PhD in December 2017. Estes writes: “To my research and teaching on the twentieth century American Indian history, the set of the *Handbook of North American Indians* and, particularly, its Volume 2, *Indians in Contemporary Society*, has proven especially salient. It has served as a primer for further lines of inquiry. These volumes cover in detail the dynamic political, social, and cultural transformations that have come to define and redefine the American Indian experience. The volume bibliographies are rich in primary and secondary sources. And, the collection’s lengthy publication history documents changes in attitude and thought, making it a historical source in its own right.”

most of the set was planned and executed when the study of American Indians was conducted largely by anthropologists, most of them non-Native. By the time the series’ last volume, *Indians in Contemporary Society* (Bailey 2008a), was published, the situation had changed dramatically, and the new reality was perhaps symbolized best by the 2004 opening of the Smithsonian’s National Museum of the American Indian. As one reviewer characterized these shifts in disciplinary paradigms: “It can even be argued that the *Handbook* stands as a monument to a bygone anthropology and a summary of the efforts to reconstruct aboriginal culture. In this sense, the *Handbook*, which perhaps is intended as a starting point for understanding a particular people or issue, is also an ending point” (Miller 1991–1992:174). Another reviewer wondered: “The greatest question that arises in my mind . . . is whether or not anthropology has much to contribute to the discussion of contemporary Native North American issues” (Watkins 2009:679).

While Native American peoples and cultures have survived and thrived in the twentieth and into the twenty-first centuries, there have been significant losses and changes. Scholarship itself will inevitably change, and no cultural summary may be free of the shortcomings of the era in which it is produced. Yet future students of Native American cultures and societies will continue to rely on the materials brought together during the production of the *Handbook of North American Indians* series, now in its fifth decade.

Acknowledgments

For valuable assistance in the preparation of this chapter, the authors would like to thank Dan Cole, Ives Goddard, Corey Heyward, Igor Krupnik, Cesare Marino, Ginger Strader Minkiewicz, Dave Rosenthal, and Carolyn Smith. Many of the illustrations in this chapter were enhanced by Noel P. Elliott.

Contributors

This list gives the academic affiliations of authors and contributors at the time this volume went to press. Dates indicate when each manuscript was (1) first received by volume editor; (2) revised and submitted by author/s after peer review; and (3) accepted for publication, except for minor later updates. Asterisks indicate that the author is affiliated with the Smithsonian Institution.

Tributes

In September 2021, when this volume was already in copy editing, we lost a cherished member of our editorial team, Dr. Ira Jacknis (b. 1952, d. 2021). Remembering Ira's contribution to the inception and preparation of this volume inspired us to add this "Tributes" section to honor him and other partners to the *Handbook of North American Indians* series who passed away between 2018 and 2021.

Contributors: Gwyneira Isaac (GI), Igor Krupnik (IK), Joanna Cohan Scherer (JCS), Joe Watkins (JW), Larry Nesper (LN), Sebastian Braun (SB), and Sergei A. Kan (SK)

DIANE DELLA-LOGGIA (b. 1946, d. 2020)

Diane was born in West Chester, Pennsylvania. She attended Brown University, where she earned an AB in American history in 1968. In 1972, she received her MA from the College of William and Mary, writing a thesis titled "Baltimore 1783–1797: A Study in Urban Maturity." Hired by William Sturtevant in 1972 as the manuscript and copy editor for the 20-volume *Handbook of North American Indians* series, Diane ushered 15 volumes into print between 1972 and 2008. For more than 35 years, she was responsible for the style, format and English usage for 863 *Handbook* chapters, or 13,527 pages. Her editorial approach was meticulous, and she worked attentively with the authors on recommended revisions.

In 1978, she was made production manager of the *Handbook* office, responsible for developing production schedules for chapters from submission through publication. She was responsible also for reviewing galleys and page proofs, and for ensuring that the final bound volumes conformed to *Handbook* standards. Diane prepared quarterly reports from 1976 through 1983 on the *Handbook* volumes that are invaluable for following the history of the project during those years. These quarterly reports and her papers are now in the Smithsonian's National Anthropological Archives with the *Handbook* Papers (Della-Loggia 1976–1983). After the *Handbook* office was closed in December 2007, Diane was one of two staffers who volunteered their time to finalize volume 2, *Indians*

in *Contemporary Society* (2008). This volume would not have been published in complete *Handbook* style without her dedication and perseverance. She retired from the Smithsonian in 2007, when the *Handbook* office was closed. JCS

RAYMOND ("RAY") J. DEMALLIE, JR. (b. 1946, d. 2021)
Ray was born in Rochester, New York. While in high school, he spent summers in Washington, D.C., at the Smithsonian Bureau of American Ethnology Archive, where Margaret Blaker, William Sturtevant, and John Ewers nurtured his interest in Native American cultures. He graduated with a BA, MA, and PhD in anthropology from the University of Chicago, writing his thesis on Teton Dakota kinship and social organization.

Ray joined the Department of Anthropology at Indiana University in 1973, remaining there until he retired in 2017. In 1984, he cofounded the American Indian Studies Research Institute with linguist Doug Parks and, through their programs, mentored students and consulted with Native communities on language-revival projects. His numerous contributions were in the areas of Plains ethnohistory, folklore studies, cultural history, museums, and material culture, including his seminal *Sioux Indian Religion: Tradition and Innovation* (University of Oklahoma Press, 1987), coedited with Douglas Parks, and *The Sixth Grandfather: Black Elk's Teachings Given to John G. Neihardt* (University of Nebraska Press, 1984). Together with Vine Deloria, Jr., Ray was instrumental in promoting applied legal history by assisting cases for Sioux treaty rights, helping tribes to reestablish their national sovereignty. He returned to the Smithsonian frequently, and in 1983, he was recruited as editor of the volume 13, *Plains*. Published in 2001, the volume required two bound books because of its size. Besides serving as its editor, Ray authored or coauthored several chapters in the volume: "Introduction," "History of Ethnological and Ethnohistorical Research" (with John Ewers), "Assiniboine" (with David Miller), "Sioux until 1850," "Yankton and Yanktonai," "Teton," and "Tribal Traditions and Records." He also contributed several biographical sketches—on James Owen

Dorsey, Alice C. Fletcher, Alfred L. Riggs, Stephen R. Riggs, and James R. Walker—to the “Non-Indian Biographies” section in volume 4, *History of Indian–White Relations* (1988). *JCS*

RAYMOND (“RAY”) D. FOGELSON (b. 1933, d. 2020)

Ray Fogelson was born in Redbank, New Jersey. As an undergraduate at Wesleyan University, he majored in psychology but eventually shifted to anthropology and developed a life-long interest in Native American cultures and history. He maintained a strong interest in psychological anthropology and American Indian ethnology during his graduate work in anthropology at the University of Pennsylvania under the mentorship of A.I. Hallowell and Anthony F.C. Wallace. Fogelson conducted ethnographic field research among the Eastern Cherokee, writing his PhD dissertation (1962) that combined ethnographic and ethnohistorical data with anthropological theory, psychological and symbolic anthropology. In later years, he also conducted field research among the Oklahoma Cherokee and Creek people as well as the Shuswap (Secwépemc) of British Columbia.

After obtaining his PhD, Fogelson taught anthropology at the University of Washington in Seattle, and in 1965, he moved to the University of Chicago, where he remained until his retirement in 2011. He edited several books and published numerous articles on Cherokee culture and history, psychological anthropology, history of anthropology, anthropology of religion, and ethnohistory. His ideas about ethnohistory and “ethnoethnohistory” (an indigenous people’s ideas about their own history) have had a particularly strong influence on numerous anthropologists and (ethno)historians. A man of great personal warmth, he mentored several generations of students who specialized in American Indian ethnology and ethnohistory; many of them contributed to the various volumes of the *Handbook of North American Indians* series, including volume 1. Ray served as volume editor for volume 14, *Southeast* (2004), for which he also authored/coauthored three chapters: “Introduction” (with Jason B. Jackson), “History of Ethnological and Linguistic Research,” and “Cherokee in the East.” *SK*

JANE H. HILL (b. 1939, d. 2018)

Jane Hill (née Hassler) was born in Berkeley, California. She received a BA in anthropology from the University of California, Berkeley (1960) and her PhD in anthropology from the University of California, Los Angeles (1966). She worked closely with linguistic anthropologist William Bright and wrote her dissertation on the grammar of Cupeño. She was on the fac-

ulty of the Anthropology Department at the University of Arizona Tucson from 1983 to 2009 and a Regents Professor from 1999 to 2009. She served as the president of the American Anthropological Association (1997–1999), the Society for Linguistic Anthropology (1993–1995), and the Society for the Study of the Indigenous Languages of the Americas (2001).

Hill’s prime research was on the Uto-Aztecan languages, their grammar and phonology, sociolinguistic status, and history. She conducted fieldwork on three of them: Cupeño, Nahuatl, and Tohono O’odham, and published the reference work *A Grammar of Cupeño* (University of California Press, 2005), as well as numerous contributions on the Uto-Aztecan prehistory and the linguistic prehistory of the Southwest. Her research illustrated how language structures are shaped by economic and ideological processes in multilingual situations. Her study on variation and change in the Nahuatl (Mexicano) language as a consequence of Spanish colonialism culminated in a seminal volume, *Speaking Mexicano: The Dynamics of Syncretic Language in Central Mexico* (University of Arizona Press, 1986), produced jointly with Kenneth C. Hill. Her chapter, “The Voices of Don Gabriel” (Tedlock and Mannheim 1995), which illustrates the “mixing” of Spanish and Nahuatl, was followed by her later analysis of the relation of language and racism, including in the book *The Everyday Language of White Racism* (Wiley-Blackwell, 2008). Hill contributed the section “Language in Southwest” (with Ofelia Zepeda) to the overview chapter “Southwest-1” in this volume. *GI, IK*

IRA JACKNIS (b. 1952, d. 2021)

Ira Stuart Jacknis was born in New York City. He received his BA in anthropology and art history at Yale in 1974. While still an undergraduate, he worked as an intern at the Smithsonian Institution under William C. Sturtevant, including on the preparation for the *Handbook of North American Indians* series. It was at the Smithsonian that his interest deepened in Native American ethnology and art history as well as history of anthropology.

He began his graduate studies in anthropology at the University of Chicago in 1976, under the mentorship of Nancy Munn, George W. Stocking, Jr., and Raymond D. Fogelson, and received his PhD in 1989. His thesis, “The Storage Box of Tradition: Museums, Anthropologists, and Kwakiutl Art, 1881–1981,” was published as a book by Smithsonian Institution Press in 2002. In the 1980s, he worked at the Brooklyn Museum as an assistant curator for research on African, Oceanic, and New World art. In 1991, he moved to the Phoebe Hearst Museum of Anthropology at the Uni-

versity of California, serving as its curator until the time of his death.

Besides his seminal book on the history of Kwakwaka'wakw art, Jacknis published several other books—*Objects of Myth and Memory: American Indian Art at the Brooklyn Museum* (University of Washington Press, 1991), *Carving Traditions of Northwest California* (University of California, Berkeley, 1995), and *Food in California Indian Culture* (University of California, Berkeley, 2004)—and numerous articles on the history of anthropology, museum anthropology, Native American ethnology, and art. He was an outstanding scholar, museum curator, and mentor. He joined the editorial team for volume 1 of the *Handbook* at the very beginning; served on the volume advisory board responsible for the history of the *Handbook* section; and was first author of two chapters, “California” and “Handbook: A Retrospective.” SK

FRANK RAYMOND LAPENA (b. 1937, d. 2019)

Frank LaPeña (Wintu name: Tauhindauli) was a Nomtipom-Wintu American Indian painter, printmaker, ethnographer, professor, ceremonial dancer, poet, and writer. LaPeña helped define a generation of Native artists in a revival movement to share their experiences, traditions, culture, and ancestry. Born in San Francisco, he was sent to federal boarding school at Chemawa Indian School in Salem, Oregon, and later to the Stewart Indian School in Carson City, Nevada. He received a BA in 1965 from California State University, Chico, and his MA in 1978 in anthropology from California State University, Sacramento. He taught at Shasta College at California State University, Sacramento within the Art Department and Ethnic Studies Department from 1969 to 1971 and was director of the Native American Studies Department from 1975 to 2002.

LaPeña was a founding member of the Maidu Dancers and Traditionalists, dedicated to the revival and preservation of California Native arts. He worked in multiple media and began exhibiting artwork in 1960, with his art shown nationally and internationally. In 1999, he was the featured artist at the 48th Venice Biennale in the exhibition *Rendezvoused*; he was part of the seminal art exhibition curated by artist Carlos Villa, *Other Sources: An American Essay* (1976), an alternative celebration of the United States Bicentennial focused on people of color and women. His book *Dream Songs and Ceremony: Reflections on Traditional California Indian Dance* (Heyday, 2004) concentrated on dance traditions of the Upper Sacramento Valley and Sierra foothills. In his writings and talks, he discussed how being an Indian dancer influenced him physically, spiritually, and socially, and he complements his vibrant paintings with an

introduction and commentary. He contributed the chapter on Wintu culture for the first published volume of the *Handbook* series, volume 8, *California* (1978). JW

DOUGLAS R. PARKS (b. 1942, d. 2021)

Douglas (“Doug”) Richard Parks was born in Long Beach, California. He earned a BA in anthropology and a PhD in linguistics (1972) at University of California, Berkeley. Doug’s dissertation was on Pawnee, under Wallace Chafe, and Mary Haas was an important influence. While teaching at Idaho State University, he was a post-doctoral fellow at the Smithsonian Institution in 1973, where he edited a manuscript by James Murie (or Sa-Ku-Ru-Ta, 1862–1920), a Pawnee who worked for the Bureau of American Ethnology on an account of Pawnee religious ceremonies, published as Smithsonian Contributions to Anthropology No. 27, *Ceremonies of the Pawnee Part I: The Skiri* and *Part II: The South Bands* (Smithsonian Institution Press, 1981).

In 1970, Doug began a lifelong study of Arikara language, culture, and history. He moved to the University of Mary in Bismarck, North Dakota (1974) to direct a program developing education materials for Native languages. He worked with Lakota/Dakota and, in 1978, started his Sioux-Assiniboine-Stoney dialect survey with A. Wesley Jones. With Raymond DeMallie, he published a seminal paper reclassifying the Sioux-Assiniboine-Stoney dialect continuum (in *Anthropological Linguistics*, 1992). In 1983, he moved to Indiana University, where he and DeMallie founded the American Indian Studies Research Institute (AISRI). Through AISRI, they worked together on various Siouan and Caddoan languages and cultures.

Doug produced a trove of publications on Pawnee and Arikara, including *Traditional Narratives of the Arikara Indians*, with Lula Nora Pratt (University of Nebraska Press, 1991), *A Dictionary of Skiri Pawnee* (University of Nebraska Press, 2008), and a coedited book series; developed pedagogical materials for Native languages; and taught Lakota language classes. Before he became too ill, he had hoped to finish a Yanktonai dictionary. Together with Ray DeMallie, he took over volume 13, *Plains*, and served as its associate editor. He also authored/coauthored seven chapters: “Caddoan Languages,” “Siouan Languages” (with Robert L. Rankin), “Arikara,” “Pawnee,” “Kit-sai,” “Enigmatic Groups,” and “Tribal Traditions and Records” (with Raymond J. DeMallie), as well as “Synonymies” sections in all tribal chapters. SB

ROBERT PETERSEN (b. 1928, d. 2021)

Robert Karl Frederik Petersen—Greenlandic Inuit scholar, dialectologist, anthropologist, and university

professor—was born in Maniitsoq, West Greenland (Kitaa). He received training as a schoolteacher at the Greenland seminary in Nuuk (Ilinnarfissuaq, 1948) and then in Denmark. In 1954–1956, he taught at the same seminary in Nuuk, and in 1967, he received the MA degree at the University of Copenhagen, where he continued teaching Eskimo/Inuit language, history, and literature. In 1975, he became professor of Eskimology at the University of Copenhagen, the first Greenlander to hold a professorship. With the establishment of Ilisimatusarfik (University of Greenland), originally as the Inuit Institute, Petersen moved to Nuuk to become its first Director (1983) and then its first Rector (1987), until his retirement in 1995.

Petersen published numerous papers and several books, including *Ilisimatusarfik: The University of Greenland* (Nuuk, 1988) and *Settlements, Kinship and Hunting Grounds in Traditional Greenland: A Comparative Study of Local Experiences from Upernavik and Ammassalik* (Danish Polar Center, 2003). He conducted research in many areas across Greenland, also in Arctic Canada and in Denmark, and he was an internationally recognized authority on Greenlandic Inuit (Kalallit) history, literacy, orthography of the Greenlandic language (Kalallisut), cultural development, and Indigenous education. He received numerous awards, including an honorary doctorate from the Université Laval (1992) and the Ilisimatusarfik (2010), the Greenland Culture Award (1993), and the International Arctic Social Science Association award (2008), and was elected to the Royal Gustavus Adolphus Academy for Swedish Folk Culture. Petersen was the only Greenlandic Inuit participant of the *Handbook* project. He contributed four chapters to volume 5, *Arctic* (1984): “East Greenland before 1950,” “East Greenland after 1950,” “Greenlandic Written Literature,” and “The Pan-Eskimo Movement.” *IK*

MARK ANTHONY ROLO (b. 1963, d. 2020)

Mark was a Bad River Band of Lake Superior Chippewa tribal member, journalist, playwright, and educator. He grew up in Milwaukee and northern Wisconsin. He received a BA in journalism from the University of Minnesota, and MFA in creative writing from Chatham University. He wrote a column for Native newspaper *The Circle* in Minneapolis as well as the magazine column “Going Native” for *The Progressive*. Active in the Native American Journalists Association, he served as its executive director in 2008–2010. He was also the Washington D.C. bureau chief for *Indian Country Today*. His work appeared in the *Milwaukee Journal-Sentinel*, the *Philadelphia Inquirer* and the *Denver Post*. For an educational film in the Native American Public Telecommunications

series *Indian Country Diaries: A Seat at the Drum* (2006), Rolo journeyed to Los Angeles to interview a number of Native people in the largest urban Native American community in the nation. In addition to a play titled “Mother Earth Loves Lace,” he is the author of a memoir, *My Mother Is Now Earth*, (Borealis Press, 2012), which earned the 2013 Northeastern Minnesota Book Award. He taught news and creative writing at the University of Wisconsin-Madison School of Human Ecology, at the Lac Courte Oreilles Ojibwe Community College, the White Earth Tribal and Community College, and at the University of Minnesota. He cocreated and taught Project Phoenix, a journalism workshop for Native high school students sponsored by the Native American Journalism Association. Rolo contributed the chapter “Film” to volume 2, *Indians in Contemporary Society* (2008). *LN*

DENNIS J. STANFORD (b. 1943, d. 2019)

Dennis Stanford, Paleo-Indian archaeologist, was born in Cherokee, Iowa, and grew up in New Mexico and Wyoming. He was trained in North American archaeology, earning a BA from the University of Wyoming (1965) and a PhD from the University of New Mexico (1972). He did his PhD study excavating ancient sites at Utqiagvik (then Barrow) in North Alaska. In 1972, he joined the Department of Anthropology at the Smithsonian National Museum of Natural History, launching a 47-year career as museum curator, field archaeologist, and expert in Paleo-Indian ecology, early peopling of the New World, and circumpolar Paleolithic archaeology. He founded and directed the Smithsonian’s Paleo-Indian Program, which became one of the world’s prime centers in research and collecting on the origins of the first inhabitants of North America. He conducted fieldwork across the Rocky Mountains and the U.S. Southwest, as well as in Alaska, Siberia, northern China, and lately along the U.S. East Coast and in the Chesapeake Bay region, searching for traces of early Paleo-Indian cultures.

Stanford authored and coauthored numerous papers and several books on Paleo-Indian archaeology and early cultural origins in North America. In his later career, he was specially known for his hypothesis, based on his north Alaskan experience, that European Late Paleolithic Solutrean people may have reached North America by moving across the southern edge of the North Atlantic pack ice more than 16,000 years ago. This proposal was introduced in many papers and a book, *Across Atlantic Ice: The Origin of America’s Clovis Culture* (University of California Press, 2012), with Bruce A. Bradley. Stanford served as one of three associate editors for volume 3, *Environment, Origins, and Population* (2006), in charge of

its section on Paleo-Indian history of North America, for which he also contributed an introductory chapter, "Paleo-Indian." *IK*

RENNARD STRICKLAND (b. 1940, d. 2021)

Rennard Strickland, a pioneer in the movement for Native rights and a legal historian of Indigenous law, was born in Muskogee, Oklahoma, of Osage and Cherokee heritage. He was the Founding Director of the Center for the Study of American Law and Policy at the University of Oklahoma in Norman and the only person to have been a tenured professor of law at all three State of Oklahoma Law Schools (in Norman, Oklahoma City, and Tulsa). He graduated from the Northeastern State College (1962) and received his law degrees (JD, 1965; SJD, 1970) at the University of Virginia School of Law. He was the first and only person to serve as both the president of the Association of American Law Schools and as the chair of the Law School Admissions Council. He was elected to the American Law Institute (1997) and received the American Bar Association's Robert Kutakes' Award (2012). In 1992, he was appointed chair of the Osage Constitutional Commission by Judge James Ellison, the federal district judge for the Northern District of Oklahoma.

Strickland was widely recognized as the primary expert on matters pertaining to Indian Law; he was involved in the resolution of numerous Indian legal cases, including testifying against the State of Oklahoma in the case that established the rights of American Indian tribes to engage in gaming. He was frequently cited by courts and by scholars as revision editor-in-chief of *Cohen's Handbook of Federal Indian Law* (LexisNexis, 1982). He had authored, coauthored, edited, and coedited 47 books, including *Sam Houston with the Cherokees, 1829–1833* (University of Texas Press, 1967) with Jack Gregory, *Fire and the Spirits: Cherokee Law from Clan to Court* (University of Oklahoma Press, 1975), and *The Indians in Oklahoma* (University of Oklahoma Press, 1980); and 208 essays, book chapters, and articles. He contributed the chapter "Lawyers and Law Programs" (with M. Sharon Blackwell) to volume 2, *Indians in Contemporary Society* (2008). *JW*

W. RAYMOND WOOD (b. 1931, d. 2020)

W. Raymond Wood was born in Gordon, Nebraska. He earned a BA and an MA from the University of Nebraska, and a PhD from the University of Oregon (1961). By that time, Wood had already worked with the Missouri River Basin Survey and the State Historical Society of North Dakota; he also supervised archaeological fieldwork in Missouri. After two years with the Museum of Anthropology at the University of Arkansas, he joined the University of Missouri's anthropology department, where he taught until 2001.

Wood wrote a seminal study of the Huff Site, *An Interpretation of Mandan Cultural History* (1967), published as the Smithsonian Bureau of American Ethnology's River Basin Surveys Papers No. 39. His research was always embedded in rich historical and cultural studies—*Anthropology on the Great Plains* (University of Nebraska Press, 1980), edited with Margot Liberty, and *Archaeology on the Great Plains* (University Press of Kansas, 1998). His great interest was especially the fur trade on the Missouri River, contributing to *The Fur Trade in North Dakota*, edited by Virginia L. Heidenreich (State Historical Society of North Dakota 1990), and coauthoring *Early Fur Trade on the Northern Plains: Canadian Traders among the Mandan and Hidatsa Indians, 1738–1818*, with Thomas D. Thiessen (University of Oklahoma Press, 1985). Many of his publications came out after his retirement: *Karl Bodmer's Studio Art*, with Joseph C. Porter and David C. Hunt (University of Illinois Press, 2002); *Prologue to Lewis and Clark: The Mackay and Evans Expedition*, with a foreword by James P. Ronda (University of Oklahoma Press, 2003); and *Karl Bodmer's America Revisited: Landscape Views across Time* (University of Oklahoma Press, 2013). Wood was an exemplary scholar with wide-ranging interests in archaeology, ethnohistory, and ethnology, and a deep knowledge of the Missouri River and its Native peoples. He authored/coauthored three chapters for volume 13, *Plains* (2001): "Plains Village Tradition: Middle Missouri," "Mandan," and "Omaha" (with Margo P. Liberty and Lee Irwin). *SB*

Appendix 1: Smithsonian *Handbook* Project Timeline, 1964–2014

IGOR KRUPNIK AND JOANNA COHAN SCHERER,
WITH ADDITIONS BY JAN DANEK AND WILLIAM L. MERRILL

1964

February 1, 1964: Smithsonian Board of Regents elects S. Dillon Ripley to serve as the eighth secretary of the Smithsonian Institution.

1965

February 1, 1965: Ripley abolishes the Smithsonian Bureau of American Ethnology (BAE). The BAE merges with the Department of Anthropology of the Museum of Natural History under one umbrella unit, the Smithsonian Office of Anthropology (SOA).

Spring 1965: Ripley invites Professor Sol Tax, renowned anthropologist from the University of Chicago, to become the first head of the SOA. Tax eventually declines to take the job but agrees to serve as Ripley's special advisor on Anthropology (starting on January 1, 1966).

April–May 1965: Sol Tax solicits short personal statements from the SOA staff members (via SOA chair Richard B. Woodbury) asking SOA curators and researchers to indicate their professional areas and interests.

September 16–18, 1965: Smithsonian organizes a major three-day celebration of James Smithson's birthday (1765–1965) featuring public events, honorary talks, and the unveiling of a new Smithsonian logo. Anthropologist Claude Lévi-Strauss gives a speech praising the esteemed legacy of Smithsonian American Indian studies.

November 1965: Secretary Ripley, in his talk at the annual meeting of the American Anthropological Association, offers the Smithsonian as prospective institutional base for international programs in contemporary anthropology. (Ripley 1966a)

December 27, 1965: Sol Tax meets with the SOA staff and solicits another set of personal statements on indi-

vidual research plans. These statements were eventually submitted during January–February 1966.

December 28, 1965: John C. Ewers submits his personal statement, titled “My Research Interests and Program” to Tax, in which he mentions “a complete revision and up-dating of BAE Bulletin 30, *Handbook of American Indians North of Mexico*.” It takes just one paragraph of the five-page outline of Ewers' activities, under the heading of “SOA projects I should like to see in the future.” (Ewers 1965)

1966

January 4, 1966: (document erroneously dated January 4, 1965) John Ewers produces 16 copies of his memo to Tax from December 28, 1965, for distribution among the SOA staff. Smithsonian anthropologists become aware of the idea of the new “revision” of the *Handbook*. (Ewers 1966a)

January 1966: In response to Ewers' memo, Waldo R. Wedel strongly endorses the idea of “updating and expansion of the Handbook of Indians North of Mexico.” While borrowing some of Ewers' wording, he offers a much stronger justification of the new project (Wedel 1966); Margaret Blaker, SOA (former BAE) archivist, supports the idea of the “revision of the ‘Handbook of American Indians North of Mexico.’” (Blaker 1966)

January 26, 1966: In a meeting with Sol Tax, SOA staff discuss future SOA activities in the field of American Indian research, including the production of the new *Handbook of North American Indians*. (Smithsonian Office of Anthropology 1966a)

February 14, 1966: John Ewers sends a memo to Richard Woodbury, SOA chair, that significantly expands his vision on the revised *Handbook of Indians North of Mexico* and specifically addresses the issue of the prospective *Handbook* editors, with a few candidates proposed for consideration.

February 24, 1966: William Sturtevant submits his ideas regarding the proposed *Handbook* (1 typed page). (Sturtevant 1966f)

February–March 1966: South American archaeology curator Clifford Evans takes the lead in the SOA planning for the new revision of the *Handbook* by volunteering to prepare and mail a questionnaire and to analyze the results.

March 1966: SOA colleagues send memos to Evans: Waldo Wedel on the “proposed revision of Handbook of North American Indians” (Wedel 1966b); John Ewers: “Some Suggestions Regarding a New Handbook of North American Indians” (Ewers 1966d); William Sturtevant: Suggestions for new Handbook of North American Indians (six pages), with the first outline for the structure of the series (Sturtevant 1966d); Henry Collins, on the new *Handbook* project and its prospective leader (editor). (Collins 1966)

April 1, 1966: Richard Woodbury sends a four-page memo to Clifford Evans with a detailed outline of the prospective tasks associated with the *Handbook*, its budget, and its staffing. The outline of a 12-volume series is presented for the first time. (HNAI Ed. Asst. Series, 9). In his second memo (April 4, 1966), Woodbury suggests names of people to send preliminary plans for the new *Handbook* for comments (one page). (Woodbury 1966)

April 4, 1966: Clifford Evans, on behalf of the “group interested in Handbook of North American Indians” prepares the first draft for “special supplemental appropriation for 1967 budget” for the *Handbook* program in the amount of \$23,631. The editor of the future *Handbook* is listed as “not yet chosen.”

April 7, 1966: John Ewers sends a memo to Evans regarding the new *Handbook*, with the first outline of potential “groups of users.”

April 15, 1966: Clifford Evans circulates some 440+ copies of an eight-page “Questionnaire” on the future structure and focus of the new *Handbook of North American Indians*, with a request to return the questionnaire no later than May 6, 1966. (Evans 1966b)

May 4, 1966: At the SOA staff meeting, the *Handbook* project is discussed among other proposed SOA activities for 1966–1967.

May 5, 1966: First (unsuccessful) effort to solicit \$50,000 for the new *Handbook* program through special

Congressional Appropriation Memo from Mr. Bradley, SI acting secretary through Woodbury and Cowan (Exploration of possibility of adding \$50,000 to the SI appropriation for FY 1967, earmarked for the North American Indian Studies):

to support during FY 1967 the initiation of two coordinated anthropology programs, (1) a new edition of the Handbook of North American Indians, and (2) a major research project on American Indians in American society, at \$25,000 each. (Evans 1966c)

May 17, 1966: At the SOA staff meeting, William Sturtevant is nominated by his colleagues, and he agrees to become the *Handbook* series editor (after several prospective candidates had been discussed in his absence). The leadership of the SOA *Handbook* planning passes from Evans to Sturtevant (SOA 1966c).

May 19, 1966: John Ewers sends a four-page memo to Clifford Evans summarizing 200+ filled questionnaires on the structure and focus of the proposed new *Handbook* series. (Ewers 1966c)

May 23, 1966: Evans sends a letter to his SOA colleagues regarding the tabulation of responses to the Handbook of North American Indians Questionnaire (one page).

May 30–31, 1966: Sturtevant meets with Robert Wauchope, the editor of the *Handbook of Middle American Indians* at Tulane University, New Orleans, to discuss the planning and editorial procedures used by the Middle American handbook. (Sturtevant 1966d)

May 31, 1966: Clifford Evans’ report on the 250 questionnaire responses is completed, at which point he relinquishes direct involvement in the project.

May 1966: Sturtevant discusses the production of the *Handbook of South American Indians* with Gordon Willey at Harvard University, Cambridge, Massachusetts.

June 15, 1966: Draft statement for Smithsonian Institution Annual Report: “Towards the end of the fiscal year, the Office of Anthropology decided to begin work towards a new Handbook of North American Indians” to “replace and bring up to date the encyclopedic Handbook of American Indians North of Mexico.” It announces that “Dr. Sturtevant agreed to serve as editor of this new Handbook and, planning as to its content and format began.” Furthermore, its “aim is to produce a reference work for scholars and the

interested public, which will summarize and systematize anthropological and historical knowledge of the cultures, languages, and physical form of the Indians north of Mexico, and outline the course and results of their relationships with the later European and African settlers of the continent.” (Smithsonian 1966)

June 19, 1966: At the SOA staff meeting, Sturtevant suggests convening a planning meeting of six to seven persons and writing about 100 letters “to determine what field studies will be needed for the [new] Handbook.”

July 1966: A draft Smithsonian contract sent to Sam Stanley specifies his expected tasks, including “consult and assist on planning Smithsonian Handbook of the Indians of North America (revised edition) [wording of the original].” Stanley is hired to join the SOA staff (on September 1, 1966) as official “coordinator” of the *Handbook* project.

September 1966: Sturtevant drafts a public announcement on the Smithsonian plan for a “thoroughly revised and updated edition of the *Handbook of American Indians North of Mexico*” to be published by Smithsonian Institution Press (SI Press) (Sturtevant 1966g). It states that the proposed *Handbook* might include 15 or more volumes and lists an editorial board consisting of SOA staff with strong research interests in North American Indians (Collins, Ewers, Stanley, Stewart, Sturtevant, Tax, Wedel, and Woodbury) and Sturtevant as general editor.

October 18, 1966: The first meeting of the “Committee for the revised ‘Handbook of North American Indians’” is held at the Museum of Natural History (participants: Collins, Ewers, Stanley, T. Dale Stewart, Sturtevant, Tax, Wedel, and Woodbury). Stanley circulates a nine-page “Tentative Contents for new N.A. Indian Handbook” for volumes 1–17 prepared jointly by Sturtevant and Stanley (Anonymous 1966). The structure from the fall of 1966 generally survived for the next 50 years of the *Handbook* history, with some modifications.

November 17, 1966: SOA issues its first public statement on its plans to produce “a thoroughly revised and updated edition of the *Handbook of American Indians North of Mexico*.” The statement is aimed at soliciting (recruiting) future authors for the *Handbook* volumes and is to be circulated at the annual meeting of the American Anthropological Association and other forthcoming professional meetings (Sturtevant 1966e). The same announcement is mailed to about 1,000 specialists on North American Indians, according to a list compiled from various sources.

Late fall 1966: First report on the *Handbook of North American Indians* is circulated by Stanley. It summarizes activities associated with the project, from spring to late fall of 1966, and offers the first outline of the origin of the *Handbook* and the first year of its history.

1967

May 26, 1967: Sturtevant produces the first annual report on the activities related to the planning for the *Handbook* series for 1966–1967. (Sturtevant 1967a)

July 1967: Sturtevant produces the first summary on the origination of the Smithsonian *Handbook* series. (Sturtevant 1967e)

Summer 1967: Sturtevant leaves on a year-long sabbatical as a Fulbright scholar and lecturer at the University of Oxford. Stanley carries out daily activities associated with the *Handbook* project.

July 18, 1967: Tax sends a progress report for SOA activities, including ongoing work on the *Handbook* planning. (Tax 1967a)

Late 1967: Upon Tax’s suggestion, Secretary Ripley summons an external advisory committee to review the work of the Smithsonian Office of Anthropology.

December 19, 1967: Tax sends a memo to Secretary Ripley with the first proposal to redivide SOA and establish a new Center for the Study of Man. (Tax 1967b)

December 19, 1967: Stanley sends a one-page memo to Drs. Riesenberg, SOA chair, and Richard C. Cowan, director of Museum of Natural History, about his consultation with Sturtevant on HNAI. (Stanley 1967)

1968

January 1, 1968: Sturtevant submits typewritten notes on the search for illustrations for the *Handbook* series “based largely on Wauchope’s experience with Handbook of Middle American Indians” and instructions about how to organize the files for the future production of the *Handbook*. (Sturtevant 1968b)

March 12, 1968: Secretary Ripley argues for congressional appropriation in FY 1969 to start the production of the *Handbook* series. His request is denied.

July 1, 1968: Center for the Study of Man is established with Tax as acting director and Stanley as program coordinator. The new center is put in charge of the Smithsonian *Handbook* project, along with the Smithsonian “Urgent Anthropology” program.

September 1968: Sturtevant returns from his year-long sabbatical; active work on the *Handbook* planning resumes.

September 16, 1968: Center for the Study of Man Budget Justification identifies the CSM as “the only center for the discovery and dispersion of knowledge which can organize and direct the efforts of hundreds of experts in the field of American Indian studies so that a new and long overdue Handbook of North American Indians can be produced.”

September 1968: Smithsonian *Torch* (no. 9) article, “Center Formed for Study of Man”:

One of the most tangible of the center’s programs is the revision of the Handbook of North American Indians, a major project mobilizing hundreds of anthropologists, historians, etc. It will require years to complete and may run to fifteen volumes.

1969

January 21, 1969: In his report at the Department of Anthropology staff meeting, Sturtevant lists the following accomplishments in the *Handbook* planning: extensive file of suggestions for coverage of topics and table of contents received from 2,000 Americanists; extensive file of potential contributors; analysis of the old *Handbook* (1907–1910) gaps and coverage; the beginning of a file on biographical dictionary. (Sturtevant 1969c)

March 1969: Secretary Ripley once again tries to secure congressional funding for the production of the *Handbook* series; funds (\$20,000) granted for one position for the new Center for the Study of Man.

May 1969: Sturtevant gives a 10-minute presentation on the *Handbook* for the SI council meeting at Belmont

June 25, 1969: At the CSM executive meeting, Sturtevant presents a progress report on the *Handbook* with sections: Material presently in the working file, Preliminary Table of Contents, and Immediate Problems and Decisions.

July 30, 1969: Sturtevant sends a letter (and copy to Tax) to Ladd Hamilton (assistant director, Smithsonian Office of Personnel and Management Resources), on the subject proposal for “USA 200” Project: Hastening and Improving Publication of Encyclopedia of North American Cultures and History. It was the first indication of a plan to tie the *Handbook* production to the bicentennial celebration of the United States independence in 1976. (Sturtevant 1969d)

1969: First staff, Marianna Koskouras (secretary) and Carol Blew (editorial assistant), are hired for the *Handbook* production team.

1970

January 27, 1970: Tax sends a memo to Ripley on the status of the Center for the Study of Man for 1969 (*Handbook* mentioned on p. 1). (Tax 1970)

March 13, 1970: Stanley sends a letter to John Slocum, special assistant to the SI Secretary for American Bicentennial Planning, with the subject “CSM Bicentennial contributions”:

More specifically, we would like very much to produce the forthcoming completely revised Handbook of North American Indians in time for the Bi-Centennial. Though we may not be able to produce all 16 or more volumes by that date, we should still be able to get a portion of that number by the target date. (Stanley 1970c)

March 23, 1970: Sturtevant produces a detailed blueprint for the production of the *Handbook* series, including its general outline, search for volume editors, organization of planning meetings for individual volumes, and advertising the date of “summer 1976” for the production of at least some volumes in the series. (Sturtevant 1970b)

March 1970: Smithsonian request for a special appropriation (\$45,000 for three positions) for the *Handbook* is approved by the U.S. Congress for Fiscal Year 1971.

May 16–19, 1970: Center for the Study of Man meeting is held in Washington, D.C. (see “The Beginnings, 1965–1971,” this vol., fig. 7). From handwritten notes from May 16: at a dinner report presentation, Sturtevant outlines recent progress; there is a new request for \$50,000 and 3 positions in the 1971 fiscal year; and search has started for *Handbook* volume editors. Among the documents is a one-page handwritten or-

ganizational chart for the CSM that includes staff of the *Handbook*. (Sturtevant 1970b)

1970 (date unknown): General Advisory Board for the *Handbook* project is established made of five members: Fred Eggan (University of Chicago), Mary R. Haas (University of California Berkeley), D'Arcy McNickle (Salish/Flathead, emeritus at the University of Saskatchewan), T. Dale Stewart (Smithsonian Institution), and Gordon R. Willey (Harvard University).

June 17–18, 1970: *Handbook* Editorial Conference is held at the Smithsonian (Sturtevant, Goddard, Helm, Ortiz, Washburn, Ewers, and Stanley). (Anonymous 1970)

September 1970: Revised outline of the *Handbook* series of 16 volumes is released, with short (one-page) outlines of individual volumes and some names of the prospective volume editors added for the first time. The outline lacks volumes on the contemporary situation (future vol. 2) and “technology and visual arts” (future vol. 16) and features combined volumes for “Biographical dictionary” (later split in vols. 18 and 19) and Basin-Plateau area (later split in vols. 11 and 12). In another shorter outline from that time, Sturtevant is named as lead editor for *four* volumes: Introduction (1), Southeast (12), General Culture (13), and Analytical index (16).

October 1970: Joanna Cohan Scherer is transferred from the SOA Archives to the CSM/Handbook as illustrations researcher. *Handbook* editorial staff occupies its first dedicated space in the Smithsonian National Museum of Natural History (NMNH) building.

October 29, 1970: Sturtevant receives a letter from Anders Richter, SI Press, summarizing the promises and problems in publishing the *Handbook*. Richter understands that the series consists of “20 volumes of average 500 printed pages, presumably well illustrated with photographs and diagrams in black and white.” He estimates the cost of the production of the series at “half a million dollars, at today’s costs for composition, printing, paper and binding.” (Richter 1970)

October 16–18, 1970: First *Handbook* planning meeting for vol. 6 (*Subarctic*) is held in Iowa City, Iowa.

November 1970: A two-page “Notes on Editorial Organization and Procedures,” an informational document, discusses funding, staff, duties of the general editor (Sturtevant) and the volume editors, and num-

ber of volumes along with a schedule for completing the volumes. (Stanley 1970d)

November 5–8, 1970: A new five-member *Handbook* Advisory Board (“panel”) meets in Chicago. The meeting organized by Tax and chaired by Sturtevant also includes Stanley and six newly appointed editors of individual volumes: Wilcomb E. Washburn (*History*, vol. 4), David Damas (vol. 5, *Arctic*), June Helm (vol. 6, *Subarctic*), Alfonso Ortiz (vols. 9–10, *Southwest*), Bruce Trigger (vol. 15, *Northeast*), and Ives Goddard (vol. 17, *Languages*). Ray Fogelson joins the meeting as a prospective editor for vol. 14 (*Southeast*). The series’ Advisory Board recommends adding a new volume on recent and contemporary Indian affairs (to be edited by D’Arcy McNickle, vol. 2). Names of five more volume editors are suggested at the meeting.

November–December 1970: Planning meetings are held for individual *Handbook* volumes: vol. 17 (*Languages*) in Chicago (November 8); vol. 15 (*Northeast*) in Montreal, Canada (November 13–15); vol. 4 (*History of Indian–White Relations*) in Boston, Massachusetts (December 30–31).

December 16, 1970: Sturtevant sends a memo to Ripley titled “Progress Report on *Handbook of North American Indians*.” (Sturtevant 1970d)

1971

January 1971: Planning meetings are held for *Handbook* volumes: vol. 14 (*Southeast*) in Washington, D.C. (January 5–10); vols. 9 and 10 (*Southwest*) in Albuquerque, New Mexico (January 7–9); vol. 5 (*Arctic*) in Hamilton, Ontario, Canada (January 15–16).

Winter 1971: Sturtevant publishes the first (and the only) detailed update on the Smithsonian *Handbook* project (Sturtevant 1971f) with the full list of the prospective *Handbook* volumes and brief description of each individual volume, including a detailed coverage of vol. 1, *Introduction*. The release date for most of the volumes is set for June 25, 1976.

February–March 1971: Planning meetings are held for *Handbook* volumes: vol. 2 (*Indians in Contemporary Society*) in Albuquerque, New Mexico (February 18–22); vol. 7 (*Northwest Coast*) in Portland, Oregon (February 26–29); vol. 8 (*California*) in Berkeley, California (March 4–7); second planning meeting for

vol. 6 (*Subarctic*) in Ottawa, Canada (March 17–21); vol. 11 (*Basin-Plateau*) in Reno, Nevada (March 19–20), with the decision to split it into two separate volumes (vol. 11, *Great Basin* and vol. 12, *Plateau*) approved at the meeting; vol. 13 (*Plains*) in Norman, Oklahoma (March 21–23).

February 1971: Major package of documents for the *Handbook* series is prepared by Sturtevant and the Handbook office for sharing with future authors. It includes: (1) revised outline for the entire series of 18 volumes (with the *Southwest* and *Biographical Dictionary* volumes proposed as two volumes each), with all named volume editors; (2) preliminary note to contributors; and (3) draft table of contents for each of the proposed 18 volumes. An attached table lists 924 chapters planned for the entire series, not counting the *Biographical Dictionary*.

April 1971: Secretary Ripley presents an update on the production of the *Handbook* in his testimony to the congressional Budget Committee and requests new funding for the project in Fiscal Year 1972. The new funds (\$48,000) allow for hiring three more staff members.

Spring 1971: Invitation letters are sent from the Handbook office to individual scholars inviting them to serve as contributors to the respective *Handbook* volumes.

May 2–3, 1971: Planning meeting for volume 3 (*Environment, Origins, and Population*) is held in Tucson, Arizona.

June 4, 1971: In a letter to Gordon Hubel, director of the SI Press, Stanley provides the first estimates for future *Handbook* distribution, including “a minimum of 500 sets to Indian tribes, Indian schools, Indian Studies programs and various Indian organizations.” The letter also provides the following dates for the *Handbook* production: manuscripts to editorial office, June 1972; manuscripts ready for printer, May 1, 1974; deadline for appearance of all 20 volumes, June 25, 1976. (Stanley 1971b)

June 25–28, 1971: Second planning meeting is held for volume 2 (*Indians in Contemporary Society*), in Albuquerque, New Mexico.

November 1971: Final 17-page *Guide for Contributors to the Handbook of North American Indians* is produced and circulated to specify chapter style requirements and major steps in the *Handbook* writing,

editing, and production process. Partial drafts of this documents have been disseminated by Sturtevant as early as February 1971 for criticisms and suggestions.

December 1971: First draft chapters for individual volumes arrive at the Smithsonian Handbook office in Washington, D.C.

1971: Preliminary list of names of prominent Native Americans for the inclusion to volumes 18–19 (*Biographical Dictionary*) is mailed to over 2,000 people, including many Native American tribal offices and tribal leaders.

1972

New *Handbook* staff members are hired: Lorraine Jacoby, bibliographer (February), Jo Moore, scientific illustrator (August), and Diane Della-Loggia, copy editor (September).

March 4–5, 1972: *Handbook* Editors’ meeting is held at the National Museum of Natural History in Washington D.C., to discuss the structure and content of volume 1 (*Introduction*). (Anonymous 1972a)

Spring 1972: Detailed outlines and guidelines to authors (with prospective word count for each individual section) are circulated to contributors of individual *Handbook* volumes.

July 29–30, 1972: Planning meeting is held for volume 16 (*Technology and Visual Arts*) in Washington, D.C.

September 7, 1972: Volume 8 (*California*) is internally selected to be the first volume to be worked on “to set standards for illustrations for the whole *Handbook*.” (Sturtevant 1972f)

September 1972: Smithsonian Institution makes a request for \$180,000 for the preparation of the *Handbook* in FY 1974, under its special “Bicentennial” appropriation.

October 13, 1972: Hubel of SI Press writes to Challinor, Stanley, Sturtevant, and Kraft regarding proposed meeting on October 19, to lay out responsibilities and plans for publishing the *Handbook* series.

Fall 1972: Handbook office moves to its permanent headquarters on the ground floor of the Smithsonian Natural History Museum building (where it remained until its closure in December 2007).

1973

June 1973: Sturtevant produces revised version of the outline for volume 16 (*Technology and Visual Arts*) but refrains from soliciting prospective volume contributors.

June 25, 1973: Meeting is held with the SI Press regarding specs for *Handbook* publication.

Summer 1973: U.S. Congress obligates \$39,540 in FY 1974 and \$300,000 in FY 1975 for the production and printing of the “Encyclopedia of North American Indians.” The bulk of the funds were to be transferred to the Government Printing Office for *Handbook* publication by 1976.

Late 1973: The Handbook office staff makes internal decision to concentrate on the production of two volumes, *California* (vol. 8) and *Northeast* (vol. 15), as having the highest chance to be completed and published by 1976.

November 27, 1973: A meeting is held with the representatives of the SI Press and the congressional Joint Committee on Printing to discuss the future production and distribution of the *Handbook* series. Government Printing Office (GPO) is recommended as an “ideal partner” for the *Handbook* venture to meet the U.S. bicentennial production deadline of June 25, 1976. (Hubel 1973)

1974

Spring 1974: Secretary Ripley secures a total of \$930,000 in congressional appropriation to support the production of the *Handbook* series and for printing its volumes as a part of the Smithsonian bicentennial program.

May 9, 1974: Stanley requests money from bicentennial funds for *Handbook* production.

May 16, 1974: Stanley requests additional funds from bicentennial budget in support for Handbook office personnel.

December 4, 1974: Memo from T. Ames Wheeler (treasurer of SI) regarding FY 1976 budget recognizes that CSM is overseeing “20 volume Encyclopedia of North American Indians to be published by the Bicentennial. . . . Funds for printing of the Encyclopedia are contained in the Bicentennial budget request.”

1975

April 1975: Sturtevant sends an updated outline to the bicentennial office pledging to produce all 20 volumes of the *Handbook* by July 1978, with 7 volumes to be released by June 25, 1976. (Sturtevant 1975b; see “Production of the *Handbook*, 1970–2008,” this vol., table 2).

June 1975: The first internal Smithsonian audit of the Handbook operations by the SI Office of Audits is requested by David Challinor, under secretary for science, and Charles Blitzer, assistant secretary for history and arts, as a result of the March 12, 1975, Equal Employment Opportunity Commission’s (EEOC) favorable ruling of Scherer’s sex discrimination case. Findings of the audit are released August 22, 1975.

September 23, 1975: In a joint memo to Smithsonian secretary Ripley, Under Secretaries Challinor and Blitzer recommend intensifying the search for full-time *Handbook* project manager, so that “Sturtevant no longer has any managerial responsibility over the staff.” (Challinor and Blitzer 1975).

December 1975: Sturtevant compiles two official statements for release at the annual meeting of the American Anthropological Association on December 2–6, 1975, with an update on the production of the *Handbook*. The first memo provides the names of 10 Handbook office staff members (Betty T. Arens, Diane Della-Loggia, Jo Moore, Brigid Melton, Judy Wojick, Joanna C. Scherer, Lorraine Jacoby, Mark Passen, Lydia Ratliff, and Alice Nance). The second memo provides the schedule for the release of the *Handbook* volumes:

The first volume to be published will be volume 8, *California*, due to appear on June 25, 1976. Volume 15, *Northeast*, will also be published during 1976. The schedule for the rest is less certain: some additional volumes may be issued in 1976, and several more will appear in 1977. Those most nearly completed are (in approximate order of probable publication): 6, *Subarctic*; 5, *Arctic*; 9–10, *Southwest*; 4, *History of Indian–White Relations*; 17, *Languages*; 13, *Plains*; 7, *Northwest Coast*; 11, *Basin*; 3, *Environment, Origins, and Population*; 12, *Plateau*; 14, *Southeast*; 1, *Introduction*; 2, *Indians in Contemporary Society*. The only volumes that are lagging so far as to make 1977 publication absolutely impossible are 16, *Technology and Visual Arts*; 18–19, *Biographical Dictionary*; and 20, *General Index*. (Sturtevant 1975a)

December 8, 1975: Chris Peratino submits his report on the audit of the “Encyclopedia of North American Indians Project.” The report argues for realistic 601

printing schedule and for the hiring of a Handbook office manager, removing overall managerial responsibility from the general editor. (Peratino 1975)

1976

Winter 1976: Beginning in 1976, programs of the Center for the Study of Man are gradually phased out. Stanley is transferred from the CSM to the staff of the director of the National Museum of Natural History and Tax's service as the center's director is discontinued. Porter M. Kier, director of the National Museum of Natural History and National Museum of Man, becomes CSM administrator (October 1976). The *Handbook* is administratively transferred to NMNH.

April 2, 1976: John F. Jameson, Smithsonian assistant secretary for administration, informs Under Secretaries Blitzer and Challinor that the *Handbook* production is grossly behind the schedule and that a large portion of the funding appropriated for the printing of the *Handbook* (\$330,000 in FY 1975, \$300,000 in FY 1976, and \$300,000 in the postbicentennial transition) should be redirected to other Smithsonian bicentennial programs.

May 1976: Laura Greenberg is contracted as *Handbook* illustrations researcher.

June 25, 1976: By the promised date of the official release of the *Handbook* series, volumes 8, 15, and 9 (*California*, *Northeast*, and *Southwest*) are in active preparation for eventual release in 1978–1979, with additional work on volumes 6 (*Subarctic*) and 10 (*Southwest*).

July 13, 1976: James Mello, assistant director of the NMNH, becomes the first program manager for the production of the *Handbook* series and daily operations of the Handbook office. Diane Della-Loggia is appointed series “production manager,” in addition to her other duties.

August 1976: Ives Goddard is hired as assistant curator in the Department of Anthropology and joins the *Handbook* staff as linguistic editor.

December 1976: Diane Della-Loggia produces the first in the series of *Handbook Quarterly Reports* (continued through the spring of 1983), upon suggestion of James Mello, *Handbook* project manager. (Della-Loggia 1976)

1977

May 26, 1977: Sherrill Berger, CSM, sends a memo to Frances Rooney, Office of Programming and Budget, stating that according to current production scheduling *Handbook* volumes will be completed by 1983; the attached budget is to be inserted into Senate Hearings Transcript FY 1978.

July 1977: Nikki Lanza hired as first assistant illustrations researcher

September 1977: Cathe Brock, *Handbook* artifact researcher, is hired.

August–December 1977: Volumes 8 and 15 manuscripts are completely accepted; typesetting, printing, and binding contracts are in progress.

1978

March–April 1978: Vine Deloria, Jr., assumes responsibility for volume 2 (*Indians in Contemporary Society*) after the passing of its former editor, D'Arcy McNickle in October 1977.

April 1978: Volume 8 (*California*), the first volume in the *Handbook* series, is published by the Government Printing Office; a celebration party is held on April 27.

July 1978: Center for the Study of Man is officially eliminated; Handbook office is transferred from CSM to NMNH Department of Anthropology.

November 1978: Volume 15 (*Northeast*) is published; a celebration party is held on November 7. The volume is released in early 1979, with the 1978 publication date.

1979

July 1979: Stanley retires from the CSM, terminating his engagement with the *Handbook* project.

August 1979: Gayle Barsamian, *Handbook* artifacts researcher, is hired.

Dec. 6, 1979: A memo from William Fitzhugh, Anthropology chair, to James Mello, NMNH assistant director, recommends that the Handbook office be transferred to the Department of Anthropology to speed

up production and reduce Sturtevant's responsibilities by bringing in three "sub-editors" from the department for physical anthropology (Douglas Ubelaker), archaeology (Bruce Smith), and ethnology (Ives Goddard).

1980

April 1980: Volume 9 (*Southwest*), the first of the two *Southwest* volumes in the *Handbook* series covering the Pueblo groups is released, with the 1979 publication date.

June 1980: A third printing of 10,000 copies is ordered for both *California* and *Northeast* volumes as almost 15,000 copies of each have sold, in addition to the 1,500 copies distributed to universities, libraries, and other scholarly institutions

June 1980: A new version of the *Guide for Contributors to the Handbook of North American Indians* is produced for the forthcoming *Handbook* series volumes.

September 1980: Vine Deloria, Jr., editor of volume 2, visits Handbook office, revises volume outline, and, together with Sturtevant, decides to postpone production of the volume.

1981

March 17, 1981: Richard Fiske, NMNH director, sends a memo to Ripley about delays in publishing the *Handbook* series and the decision to allow authors to "publish their information in a modified version, different enough in substance and format so as not to undermine the integrity of their Handbook articles" (Fiske 1981)

May 1981: Production of the second *Southwest* volume (vol. 10) begins.

July 27, 1981: A second Smithsonian audit of Handbook office was done earlier in 1981; records and release date are not known. Findings critical to the production rate of the *Handbook* are sent to Richard Fiske, NMNH director, on July 27, 1981 (Peratino 1981a).

August 1981: The recently released first *Southwest* volume (vol. 9) has sold about 7,500 copies.

November 5, 1981: Sturtevant and Della-Loggia produce a revised production schedule for the remaining

volumes of the *Handbook* series that extends the completion of the series to 1992 (Mello 1981b).

December 1981: Vol. 6 (*Subarctic*) released; a celebration party is held on January 11, 1982. A revised flyer for promotion of the *Handbook* has been printed in 6,000 copies for booksellers that includes all four published *Handbook* volumes (vols. 6, 8, 9, and 15).

1982

Fall 1982: Colin Busby is hired as full-time managing editor and supervisor of *Handbook* staff.

December 1982: Sturtevant publishes a short update on the *Handbook* production in the *History of Anthropology Newsletter* (Sturtevant 1982) that covers sections on the history of the Americanist studies in the published and forthcoming *Handbook* volumes.

1983

March 1983: Frederick S. Hulse resigns as editor of volume 3 (*Environment, Origins, and Population*), and Richard I. Ford accepts editorship; William E. Bittle resigns as editor of volume 13 (*Plains*), and Raymond J. DeMallie accepts editorship.

May 4, 1983: Sturtevant informs James Mello and the Smithsonian administration that he plans to reduce his role as the general editor of the *Handbook* series (Sturtevant 1983a).

June 1983: The last of the quarterly reports for the *Handbook of North American Indians* (no. 26) is produced (Della-Loggia 1983).

August 15–16, 1983: Meeting of the *Handbook* volume editors to discuss the status of the production process and set the priorities for the series. Sturtevant proposes to step down from the position of the general editor and suggests Raymond DeMallie as his successor. The volume editors agree to leave Sturtevant as the general editor.

Summer 1983: Cesare Marino joins the *Handbook* staff as assistant bibliographer; work begins on volumes 18 and 19 (*Biographical Dictionary*).

September 1983: Vol. 10 (*Southwest*), the second of the *Southwest Handbook* volumes covering the non-Pueblo

groups is released by the Government Printing Office; a celebration party is held on September 6.

October–November 1983: There is a major reorganization of the Handbook office and production process, following the 1981 audit; Colin Busby resigns from the position of *Handbook* managing editor; Handbook office staff join the NMNH Department of Anthropology; the chairman of Anthropology (Ubelaker) becomes the official supervisor of the *Handbook* production.

1984

January 1984: Earnest Lohse, artifacts researcher, is hired.

April 4, 1984: Sturtevant sends letter to editors and contributors to volumes 4 (*History of Indian–White Relations*) and 7 (*Northwest Coast*) outlining the current publication schedule (vols. 5, *Arctic* due in 1984, and 11, *Great Basin* in 1985) and urging them to restart their work on chapters for the next two volumes.

May 1984: Paula Cardwell transfers from the Department of Anthropology to the Handbook office to serve as editorial assistant to the general editor.

December 1984: Volume 5 (*Arctic*) is released.

1985

January 1985: Ives Goddard assumes responsibility of the managing editor of the *Handbook* series and is made supervisor of the *Handbook* staff.

January 24, 1985: Celebration of the recently released *Arctic* volume is held.

June 1985: Intensive work on volume 7 (*Northwest Coast*) begins; a new planning committee for volume 13 (*Plains*) meets in Washington, D.C.

December 1985: *Great Basin* volume is typeset and in final stage of production.

1986

March 1986: Dan Cole is hired part-time as *Handbook* cartographer.

August 1986: Volume 11 (*Great Basin*) is printed; a celebration party is held on October 30.

September 1986: Ives Goddard takes over many of the duties of Sturtevant during the general editor's absence abroad.

1987

March 1987: Richard Ford informs all authors of volume 3 (*Environment, Origins, and Population*) that work on the volume is imminent.

April–May 1987: *Handbook* staff work on volumes 4 (*History of Indian–White Relations*) and 7 (*Northwest Coast*); artifact researcher Skip Lohse is working on volume 13 (*Plains*).

July 1987: Volume 4 (*History of Indian–White Relations*) is sent to GPO for printing.

September 1987: Karen Ackoff, illustrator, is hired.

1988

February 1988: Richard Ford states that 75 percent of volume 3 chapters are completed, and he has given his authors October 1988 as the deadline for final submission.

April 1988: Sturtevant produces a new iteration of the “Guide for Contributors to the Handbook of North American Indians” (Sturtevant 1988).

December 1988: Volume 4 (*History of Indian–White Relations*) is released. Karla Billups arrives to the Handbook office on temporary appointment

1989

January 1989: Karla Billups is hired as the full-time *Handbook* managing editor; Ives Goddard becomes the series technical editor; Sturtevant distances himself from the daily oversight of the project.

February 16, 1989: A celebration party is held on February 16 for Volume 4 (*History of Indian–White Relations*), released in December 1988.

August 1989: Alice Burnette, SI assistant secretary for Institutional Advancement, informs Secretary Adams that effort to secure private funding for the *Handbook*

would conflict with the National Museum of American Indian fundraising.

1990

August 1990: Volume 7 (*Northwest Coast*) is released; a celebration party is held on November 16.

November 1990: Intense work resumes on volume 12 (*Plateau*), under the editorship of Deward Walker.

1991

April 1991: Intense work resumes on the production of volume 17 (*Languages*) under the leadership of Ives Goddard; Marianne Mithun is invited to serve as associate editor.

April 1991: Across the board change in government funding regulations causes *Handbook* to lose \$520,000 of federal funds (printing funds and financial obligations to authors and volume editors).

June 1991: Richard Ford resigns from the position of editor of volume 3 (*Environment, Origins, and Population*), due to “low progress” and the need to change the production schedule.

October 1991: Christian Feest visits *Handbook* office; the contract for Feest as editor of volume 16 (*Technology and Visual Arts*) and outline of contents of volume is given to *Handbook* staff.

1992

February 1992: Budget received for *Handbook* office is the lowest ever; staff production of volume 13 (*Plains*) continues.

July 1992: \$75,000 from Legacy program is given to the *Handbook* office to aid reduction in budget. The decision to concentrate on volume 17 (*Languages*) production is proposed.

1993

January–August 1993: Christian Carstensen joins the *Handbook* office as intern for Joanna Cohan Scherer and conducts his research on the *Handbook* production for which he received his PhD in Germany.

May–June 1993: Mary Kaye Hale, member of Colville Confederated Tribes, Arrow Lakes Band, is hired as a contractor with Joanna Cohan Scherer to work on Plateau historical photographs.

September 1993: All federal funds obligated but not used and held over from year to year (“M” funds) are canceled by the federal government. This causes the *Handbook* project to lose much funding the staff counted on for publishing volumes and paying authors.

1994

January–September 1994: Third audit of the *Handbook* office is conducted by the SI Office of Inspector General (report released in January 1995).

November–December 1994: *Handbook* staff concentrates on the production of volume 17 (*Languages*) and volume 12 (*Plateau*) instead of volume 13 (*Plains*).

December 1994: Lorraine Jacoby, bibliographer, retires.

1995

January 1995: Report of the third audit of the *Handbook* is released; the Inspector General recommends terminating the production of the series, after the completion of the three remaining area volumes (vols. 12, 13, and 14, *Plateau*, *Plains*, and *Southeast*).

June 1995: William Merrill, Anthropology acting chair, meets with *Handbook* staff to discuss best strategy for completing remaining *Handbook* volumes.

July 29, 1995: The staff of the *Handbook* office produces a detailed memorandum on the production schedule for volumes 12 (*Plateau*), 13 (*Plains*), 14 (*Southeast*), and 17 (*Languages*) and requests to self-manage the preparation of the remaining volumes.

September 1995: Smithsonian Department of Anthropology explores the possibilities of outsourcing the production of remaining *Handbook* volumes to private publishers.

September 1995: Carolyn Rose, Anthropology deputy chair, is assigned to work with the *Handbook* staff; Karla Billups, managing editor, resigns.

November 1995: The Inspector General recommends to the Smithsonian Board of Regents that the *Hand-*

book series be terminated in three or four years for the saving of \$500,000 annually. (Inspector General 1995)

1996

May 13, 1996: The *Handbook* staff members make another proposal to self-manage the series by committee with a rotating liaison with the chair of the Department of Anthropology; Carolyn Rose, Department of Anthropology deputy chair, becomes de facto managing editor and program manager.

Spring and Summer 1996: *Handbook* staff works on volume 12 (*Plateau*) as volume 17 (*Languages*) nears completion.

November 1996: Volume 17 (*Languages*) is published. Cartographic work starts on volume 12 (*Plateau*).

December 1996: University of Nebraska Press agrees to distribute Ives Goddard's "Native Languages and Language Families of North America" map prepared for volume 17. NMNH reallocates half of *Handbook* office space to the museum registrar's office.

1997

Intensive work on Volume 12 (*Plateau*) continues.

March 13, 1997: A celebration party is held for the recently released volume 17 (*Languages*).

1998

June 1998: Volume 12 (*Plateau*) is released; no publication party is scheduled because of pending cuts in the production budget.

1998: A new planning committee for volume 14 (*Southeast*) meets in Washington, D.C.

1998: Work resumes on the production of volume 13 (*Plains*).

October 1998: The Smithsonian announces proposed 66 percent cut in the *Handbook* production budget, incurring pending cuts to the remaining editorial staff.

1999

January 1999: Final version of the "Guide for Contributors" is produced for the *Handbook* series.

January 1999: Ross Simons, NMNH associate director for Research and Collections, contracts Wayne Kelley, Jr., to conduct the fourth audit of the *Handbook* project.

March 1999: Jason B. Jackson assumes the position of associated editor for volume 14 (*Southeast*); new chapters are solicited starting in May 1999.

April 1999: The fourth internal review of the *Handbook* office recommends downsizing and joint-venture publishing for volumes 2, 3, and 16 (Kelley 1999).

May 1999: Roger Roop is hired as *Handbook* illustrator.

October 1999: The University of Nebraska Press republishes the volume 17 map "Native Languages and Language Families of North America," produced by Ives Goddard.

2000

February 2000: Melvina Jackson, *Handbook* office administrator, dies suddenly.

April 2000: *Handbook* staff is informed that Douglas Ubelaker and Dennis Stanford will take lead on the production of volume 3 (*Environment, Origins, and Population*).

July 2000: Jason Jackson and Ray Fogelson meet in Oklahoma to work out volume 14 (*Southeast*) editing procedures; work on editing individual chapters starts.

December 2000: GPO sends page proofs for part of volume 13 (*Plains*); staff realizes the volume will be 1,073 pages, too big for one bound book.

2001

June 2001: Volume 13 (*Plains*) is released as a two-volume set.

September 2001: Ruth Trocolli, artifacts researcher for volume 14 (*Southeast*), begins work.

2002

March 2002: A celebration for the newly published volume 13 (*Plains*) is postponed because *Handbook*

supervisor, Carolyn Rose, is very sick; no reception is held.

March 2002: Douglas Ubelaker assumes responsibility as lead editor to resume work on volume 3 (*Environment, Origins, and Population*), since its previous editor, Richard Ford resigned a decade earlier. A new volume planning committee is selected, and the work on the volume starts.

April 2002: Carolyn Rose steps down as Department of Anthropology chair and supervisor of *Handbook* staff; William Fitzhugh becomes chair and supervisor of *Handbook* staff.

2003

Throughout the year, *Handbook* staff works primarily on volume 14 (*Southeast*) and secondarily on volume 3 (*Environment, Origins, and Population*).

January 2003: Jason B. Jackson visits *Handbook* office to discuss restarting work on volume 14 (*Southeast*) production.

March–April 2003: GPO sells 2,496 copies of volume 13 (*Plains*) in 18 months, sales show decrease in popularity; NMNH bookstore is losing money on the *Handbook* sales and raises price of individual volumes.

December 2003: Most of volume 14 (*Southeast*) is ready for GPO.

2004

April 2004: Cristián Samper, NMNH director, and Hans-Dieter Sues, assistant director for science, tour the *Handbook* office as the staff struggles to get NMNH support. At the request of William Fitzhugh, chair of Anthropology and *Handbook* supervisor, the staff produces a four-page analysis of “Projected *Handbook* Production” issues for the museum director.

Summer 2004: Christian Feest, director of the Museum für Völkerkunde in Vienna, confirms his readiness to resume the work on volume 16 (*Technology and Visual Arts*), visits *Handbook* office (in June and September 2004).

September 2004: Volume 14 (*Southeast*), the last of the regional volumes in the *Handbook* series, is released.

November 2004: Feest submits to Fitzhugh a revised outline for volume 16 and gets positive support for its production from Samper and Sues.

2005

February–March 2005: The option of electronic version of the *Handbook* series is explored in partnership with the Alexander Street Press of Alexandria, Virginia; the proposal receives no support from the *Handbook* office staff, NMNH, or Smithsonian management. (Fitzhugh 2005)

April 22, 2005: A reception is held for the publication of volume 14 (*Southeast*).

April 2005: The NMNH Department of Anthropology is warned by the office of the SI Undersecretary for Science that the *Handbook* staff will be downsized by the end of FY 2007 and all federal positions in the *Handbook* office will be terminated. (Evans 2005)

June 2005: Vine Deloria, Jr., resigns as volume editor for volume 2 (*Indians in Contemporary Society*) and dies November 13, 2005; Garrick Bailey becomes volume editor and work resumes on volume 2.

July–November 2005: Christian Feest is contracted to complete the work on volume 16 (*Technology and Visual Arts*), with team in Vienna and Frankfurt and a production (completion) date set by August 2007 (Feest 2005); Feest visits the *Handbook* office in October and November, to examine volume materials and work with staff.

2006

April 2006: The staff of the *Handbook* office are awarded NMNH Science Achievement Award for 2005 for publication of volume 14 (*Southeast*).

May 2006: Joanna Cohan Scherer, *Handbook* illustrations researcher, retires after 36 years.

June 2006: Volume 3 (*Environment, Origins, and Population*), the largest in the series, is sent for printing.

2007

January 2007: William Sturtevant, the *Handbook* general editor, retires from his position at the Smithsonian 607

Department of Anthropology; attrition of the Handbook office staff continues.

March 2007: Ives Goddard, linguistic editor, retires from the Handbook office after 31 years, becomes linguistic curator emeritus in the Department of Anthropology.

March 3, 2007: William Sturtevant, *Handbook* general editor for more than forty years (1966–2007), dies in Washington, D.C.

March–April 2007: Volume 3 (*Environment, Origins, and Population*) is released with 2006 publication date; last celebration party is held on April 17, 2007.

August 2007: Work is completed on volume 2 (*Indians in Contemporary Society*), but the printing and release of the volume is delayed until July 2008. The production deadline for volume 16 (*Technology and Visual Arts*) is not met.

October 4, 2007: Dan Rogers, chair of Anthropology, announces closing of Handbook office on December 8, 2007.

December 8, 2007: The Handbook office officially closes; production of volume 2 continues with staff members Diane Della-Loggia and Cesare Marino working as volunteers. No more work is envisioned on the remaining unpublished volumes of the series (vols. 1, 18, 19, 20) except volume 16 (*Technology and Visual Arts*).

2008

Winter–Spring 2008: After official closure of the Handbook office, all production files are transferred to the Smithsonian National Anthropological Archives (NAA).

July 2008: Volume 2, *Indians in Contemporary Society*, is released as officially the “last” volume of the *Handbook* series; work on volume 16 (*Technology and Visual Arts*) continues under the leadership of Christian Feest in Vienna.

September 2008: 504 linear feet of *Handbook* files are accessioned into the NAA. Some files remain with staff who continue to work at the Smithsonian.

2009

July 2009: Benjamin Brown of the NAA completes a register of the papers of the *Handbook* project. His inventory records 513 linear feet with 11 boxes of oversized material and 4 boxes of rolled maps.

2011

May 2011: Due to limited storage space at the NAA in Suitland, Maryland, a major portion of *Handbook* records (including 91.5 linear feet of unpublished photographs) are sent to offsite storage. Researchers must request ahead to access these materials.

2013

February–March 2013: Mary Jo Arnoldi, Anthropology chair, raises the issue of the “unfinished” *Handbook* series, particularly of the “missing” volume 1 (*Introduction*). Igor Krupnik, Arctic ethnology curator, visits NAA and explores archival files from the early production of volume 1. Following his visit, he submits a memo to Arnoldi (March 7) on the status of volume 1 and the options to revitalize its production. A small group in the Department of Anthropology (Krupnik, Ives Goddard, and William Merrill) starts informal discussion on resuming work on volume 1. In another memo to Arnoldi (March 22), Krupnik outlines steps needed to restart volume 1.

April 2, 2013: In an executive meeting, the Department of Anthropology approves Krupnik’s proposal to resume work on volume 1 to be supervised by a small “exploratory team” of Krupnik, Goddard, and Merrill. The team’s tasks are identified as “exploring various opportunities and reaching out to prospective contributors to whatever version [of the volume] we finally recommend, including a special issue of the *Smithsonian Contributions to Anthropology* series that would require inviting several external authors.”

April–June 2013: The NMNH “exploratory team” continues discussion on the content and structure of volume 1. Several new members join the group: Daniel Rogers (NMNH), Sergei A. Kan (Dartmouth College), and Ira Jacknis (Phoebe A. Hearst Museum of Anthropology, UC-Berkeley). The idea of producing a

regular *Handbook* series volume (other than a separate stand-alone publication) takes shape.

August 2013: The volume 1 “exploratory team” starts reaching out to prospective contributors and prepares the first outline for the new volume 1, then of 31 chapters in 3 large sections.

November 2013: A group led by Krupnik, and including Merrill, Candace Greene (both at the Department of Anthropology, NMNH), Tim Johnson and David Penney (both at National Museum of the American Indian [NMAI]), Gina Rappaport (NAA), and Ginger Strader (Smithsonian Institution Scholarly Press), submits a proposal to the Smithsonian “Grand Challenges” Consortia program seeking funds to organize a planning workshop for the new *Handbook* volume and to bring together prospective contributors.

December 2013: The Smithsonian Consortia awards \$20,000 to a one-year project aimed at organizing a volume 1 planning workshop, under the title “Emerging Themes in Native North American Research: Planning the Smithsonian Agenda for the 21st Century.”

2014

March 2014: William Merrill submits the first draft chapter titled “William Curtis Sturtevant, General Editor” for the new volume 1.

March–June 2014: The planning teams produces several amended versions of the volume 1 outline;

prospective chapter contributors are invited to attend a volume planning workshop in Washington, D.C., in December 2014.

Summer 2014: Ann McMullen and Gabi Tayac (both at NMAI) and Joe Watkins (Department of Interior, Office of Tribal Relations and American Cultures) agree to join the volume 1 planning team.

September–October 2014: Krupnik presents the outline of the new volume at open meetings at NMAI (September 11) and NMNH Department of Anthropology (October 7).

December 7–8, 2014: A two-day planning meeting for new volume 1 (*Introduction*), with 30+ prospective contributors, is held successively at NMAI and NMNH in Washington, D.C. More than 30 proposals for individual chapters are presented with prospective chapter titles and short (200-word) chapter abstracts. Authors approve a nine-member planning team to serve as volume editorial board, with Krupnik as volume editor to supervise the production of volume 1.

December 12, 2014: Krupnik submits a proposal to the Smithsonian Scholarly Studies Awards Program in the Arts and Humanities titled “The Smithsonian Handbook Pledge: Producing Volume 1 (*Introduction*) to the Smithsonian Handbook of North American Indians series.” The award of \$45,890 is granted in March 2015; work on the new volume chapters starts in earnest.

Appendix 2: *Handbook* Series Production and Editorial Staff, 1969–2022

The purpose of this appendix is to fulfill the promise made in the prefaces to all previously published *Handbook* volumes, from 1978 to 2008, that “a listing of the entire editorial staff involved in the *Handbook* production” would be presented in volume 1 (Bailey 2008c:xi; Sturtevant and Heizer 1978:xii). Compiling the full list of the *Handbook* series team members over almost 40 years was challenged by the absence of organized data, particularly on the precise periods of service for several *Handbook* editorial staff, even more so, for interns and volunteers. We estimate that altogether over 1,500 people took part in the production of the *Handbook* series (including this volume)—as contributors/authors, editors, editorial and support staff, reviewers, administrators, publishers, and so on. Many of them are named in the chapters in this volume (see “Preface,” “The Beginnings, 1965–1971,” “Production of the *Handbook*, 1970–2008,” “Organization and Operation,” and “The *Handbook*: A Retrospective,” and “Appendix 1”). Listing *all* participants in the *Handbook* series may be a goal for future effort.

The majority of names listed in this appendix were extracted by William L. Merrill from the prefaces to 15 published *Handbook* volumes (1978–2008) and supplemented for the period from 1976 to 1983 by data found in the *Handbook* quarterly reports (Della-Loggia 1976–1983). Several former *Handbook* office staff, particularly Joanna Cohan Scherer, Ives Goddard, and Cesare Marino, provided additional input. The list is organized by position, with dates of service for each individual, when available. An “ellipsis” (. . .) is applied when the exact date of service remains undefined. Due to gaps in the temporal coverage of available sources, some *Handbook* staff members who served for short periods of time might not appear in the list. All chapter contributors (authors) to the *Handbook* volumes, as well as members of the volume planning committees, are named in the front and back matter of individual volumes.

In addition, many short-term interns and volunteers were involved in the production of the *Handbook* over 50 years. We could not have produced our volumes with such a high degree of detail without the

work of these individuals. Our effort to list these individuals was substantially hampered for the last two years of the production of this volume by the closing of Smithsonian offices, including the valuable archival depositories, since March 2020, due to the covid-19 pandemic. We apologize to these volunteers and interns whom we missed acknowledging.

This is only the beginning of paying a full tribute to the many people who worked on the *Handbook* project over the 50+ years since its inception. We express our deepest gratitude to everyone who contributed, in one way or the other, to the realization of this monumental effort.

Igor Krupnik

Handbook Office Editorial and Production Staff

General Editor: William C. Sturtevant (1966–2007)

Linguistic Editor: Ives Goddard (1976–2007)

Technical Editor: Ives Goddard (1989–2007)

Managing Editor: Colin I. Busby (1982–1983), Ives Goddard (1985–1989), Karla Billups (1989–1995)

Production Manager [*Handbook* Coordinator, 1976–1978]: Diane Della-Loggia (1976–2007)

Staff Coordinator: Paula Cardwell (1996–2007)

Editorial Assistant (to the general editor) [Editorial Liaison, 1990–2007]: Carol H. Blew (1969–1972), Betty T. Arens (1972–1979), Nikki L. Lanza (1980–1984), Paula Cardwell (1984–2007)

Manuscript Editor [also Manuscript and Copy Editor, 1972–1978]: Diane Della-Loggia (1972–2007)

Bibliographer: Lorraine H. Jacoby (1972–1995), Cesare Marino (2001–2007; acting bibliographer, 1995–2000)

Bibliographic Assistant: Mark Passen (1974–1976), Caroline Ladeira (1976–1981), Estella Bryans-Munson . . . , vol. 4; Peter Yiotis . . . vols. 12 and 17; Alexander Young . . . , vol. 12; Patricia O. Aflable (1991–1995), vol. 17; Michael McGinnes . . . , vols. 9–10; Douglas Hinkle . . . , vols. 3 and 14

Illustrations Researcher: Joanna Cohan Scherer (1970–2006), Laura J. Greenberg (1976–1982),

Donna Longo DiMichele (1986–1988), Elizabeth M. Hartjens (2006–2007)

Assistant Illustrations Researcher: Nikki L. Lanza (1977–1979), Anne Morgan (1979–1982), Frances Galindo [aka Frances Sundt] (. . . –1988), Rebecca Dobkins (1996), Carin Cobb (1996–1997), Brenda McLain (1998), Vicki Simon (1998–2004), Aleithea Williams (2004–2005), Erica Davis [aka Erica Paige Choucroun] (2005–2006)

Rights and Reproduction Coordinator: Erica Paige Choucroun [aka Erica Davis] (2006–2007)

Artifact Researcher: Cathe Brock (1977–1978), Cathy Wallace (1978–1979), Gayle Barsamian (1979–1985), Ernest S. Lohse (1985–1989), Thomas Kavanagh (1990–1992), Christine A. Jirikowic (1994–1997), Barbara Watanabe (1997), Brenda McLain (1998), Candace Greene (1999–2001), Ruth Trocolli (2001–2004), Dawn Mulhern (2004–2006; called “Specimen Researcher”), Shane Lutz (2004–2006; called “Specimen Researcher”)

Scientific Illustrator: Jo Ann Moore (1972–1986), Brigid Melton Sullivan (1975–1976), Karen Ackoff (1987–1997), Catherine Spencer (1998–1999), Roger Thor Roop (1999–2006)

Cartographer [Research Assistant (cartography), 1975–1978]: Judith Crawley Wojcik (1975–1986), Daniel G. Cole (1986–2007), Terence Arundel (1993–1995)

Cartographic Technician: Kimberly Rydel (1988), vol. 4; Amy Ahner . . . , vol. 7.

Graphic Arts Technician: Tuleda Yvonne Poole . . . , vol. 5; Barbara Frey . . . , vol. 5.

Researcher: Cesare Marino (1983–2007)

Administrative Assistant: Melvina Jackson (1980–2000)

Secretary: Marianna Koskouras (1969–1973), Rosemary De Rosa (1973–1974), Gloria Harman (1974–1975), Filomena Chau (1975), Alice N. Boarman (1975–1978), Jacquelyn F. Menefee (1978–1980), Valerie Smith (1981–1982), Nancy Schultz (1982–. . .), Nancy Mottershaw . . . , Justine Ickes . . . , Tujuanna L. Evans . . . , Lorretta Williams . . . , Vivian Cobb . . . , Janna Marchione.

Research Assistant: Patricia O. Afable (1991–1995) to the Linguistic Editor, Christian Carstensen (1993), to illustration researcher Joanna Cohan Scherer

One-Year Research Assistant (to the general editor): William L. Merrill (1972–1973), Susan Golla (1973–1974), Nancy Stasulis (1973–1974), Laura Conkey (1974–1975), Paula Rabkin (1975–1976)

Summer Research Assistant (to the general editor): Ira Jacknis (1973–1975)

Fellows: Jessica Cattellino (2001; Smithsonian Institution predoctoral fellow, worked with the general editor on vol. 14)

Non-Handbook Staff

Editorial, production, and logistical functions:

Samuel Stanley (Smithsonian Office of Anthropology/Center for the Study of Man, *Handbook* co-lead, 1966–1972); Marcia Bakry (NMNH Department of Anthropology, scientific illustrator); Hazel Bobb (NMNH Department of Anthropology, data entry specialist); Candace Greene (NMNH Department of Anthropology, artifact researcher); Phillip E. Minthorn, Jr. (NMNH Office of Repatriation, documented illustrations, vol. 12); Lydia Ratliff (Center for the Study of Man, devoted considerable time to *Handbook*-related activities, 1969–1972)

Other key functions (non-editorial): James F. Mello (1976–1983, project manager while assistant director of the Museum of Natural History and Museum of Man); Victor Krantz (NMNH, photographed many artifacts included in *Handbook* volumes)

Department of Anthropology chairs, 1983–2008

(Handbook project oversight): Douglas H. Ubelaker (1983–1984), Adrienne L. Kaeppler (1985–1988), Donald J. Ortner (1988–1992), Dennis J. Stanford (1992–1999), Carolyn L. Rose (1999–2002), William W. Fitzhugh (2002–2005), J. Daniel Rogers (2005–2008)

Department of Anthropology deputy chairs (involved in Handbook activities): Carolyn Rose (1992–1999), Laura Burgess (2005–2008)

Volume 1 Editorial and Production Team

Volume editor: Igor Krupnik (2013–2022)

Volume editorial board (“planning committee” 2013–2015): Ives Goddard (2013–2022), Ira Jacknis (2013–2021), Sergei A. Kan (2013–2022), William L. Merrill (2013–2022), Ann McMullen (2014–2020), J. Daniel Rogers (2013–2022), Gabrielle Tayac (2014–2016), Joe Watkins (2013–2022)

Advisory/production team: JoAllyn Archambault (2014–2018), Joanna Cohan Scherer (2014–2022), Daniel G. Cole (2016–2022), Candace Greene (2014), Cesare Marino (2014–2022), Ginger Strader Minkiewicz (2014–2022), Corey Sattes (Heyward) (2015–2022).

Production manager (assistant to editor, 2015–2017):

Corey Sattes (Heyward) (2017–2022).

Copy editor: Heidi Fritschel (2016–2018), Susan G. Harris (2021–2022)

Cartographer: Daniel G. Cole (2016–2022)

Illustration editor: Joanna Cohan Scherer (2015–2022, for the *Handbook* history section)

Graphic editor: Igor Chechushkov (2020–2022)

Permission assistance: Dawn Biddison (2019–2021)

Research/archival assistance: Janet Daneck (2015–2016), Carolyn Smith (2016–2018)

Bibliographic assistance: Kelly Lindberg (2015)

Volume planning assistance: Laura Sharp (Fleming) (2014)

Illustration assistants (interns/volunteers): Kerrie Monahan (2014–2015), Sarah Dressel (2015), Emily Solomon (2016), Hannah Toombs (2016–2017), Elizabeth Gibbons (2017), Meagan Shirley (2017), and Etta Zajic (2018–2021).

Appendix 3: Conventions on Tribal and Ethnic Names in Volume 1

IGOR KRUPNIK, WITH ADDITIONS BY DANIEL G. COLE, IVES GODDARD, CESARE MARINO, LARRY NESPER, AND JOE WATKINS

After the appearance of the *Handbook* area volumes 5–15, between 1978 and 2004, many conventional names for Indigenous Native American and First Nations groups across North America have been replaced by new ones. The new names are now commonly used as self-designations, in tribal documentation, cultural materials, and websites, in government agency lists, and in general and scholarly contexts (see “Preface,” this vol.). It is a rapidly changing political reality, as North American Indigenous groups strive to represent themselves—and to be called by others—using the names of their choice, not by designations bestowed on them by explorers, settlers, government agencies, and outside researchers. Generations of students of Native American cultures and history tried to address this multiplicity in Indigenous naming by compiling lists of “tribal synonymies” (see “Antecedents of the Smithsonian *Handbook* Project” and “The Beginnings, 1965–1971,” this vol.), including the “Synonymy” sections added to each tribal/group chapter in the *Handbook* area volumes 5–15, which readers should consult for specific detail.

Yet, unlike in the 1970s and 1980s, when volumes of the *Handbook* series went to print, no single source today may claim to be a decisive authority on Indigenous/Native ethnic naming across the entire North American continent. Each of its three nation states, the United States, Canada, and Mexico, maintains regularly updated lists of their “officially recognized” Indigenous groups, like the list of Federal and State Recognized Tribes in the United States, the First Nations/Inuit/Métis communities in Canada; and the Pueblos Indígenas (Indigenous Peoples) in Mexico (see “Sources,” this section). Similar but often quite divergent lists of North American Indigenous nations have been adopted by many international groups, like

the Survival International, International Work Group for Indigenous Affairs (IWGIA), UNESCO, UN Inter-Agency Support Group for Indigenous Peoples, online encyclopedias, databases, and interactive maps, Indigenous Peoples’ organizations and tribal portals, and myriad other web-based sources.

The prime goal of this appendix is to help volume readers navigate through the changes in Native American/First Nations names within the *Handbook* series itself, between 1978 and 2020. It includes about 140 Indigenous groups listed in the chapters and on area maps in this volume that are currently known under different names (or different spellings) than those assigned to them in other *Handbook* volumes. This list is aimed as a guide to the *Handbook* series only; it does not include all of the many hundreds of names currently in use (as of 2020), and the process of Indigenous name replacement is certain to continue. In compiling the list, we based our decisions on various sources, chapter authors’ and reviewers’ advice, and established practice, to show the ongoing shifts in Native North American political and cultural naming practices during the first decades of the twenty-first century.

Bibliography

The list includes all references cited in the volume, arranged in alphabetical order according to the names of the authors as they appear in the citations in the text and in the “Additional Readings” sections in some chapters. Multiple works by the same author are arranged chronologically; second and subsequent titles by the same author in the same year are differentiated by letters added to the dates. Where more than one author with the same surname is cited, one has been selected for text citation by surname alone throughout the volume, while the others are cited with added initials; the combination of surname with date in text citations should avoid confusion. Where a publication date is different from the series date (as in some annual reports and the like) the former is used. Dates, authors, and titles that do not appear on the original works are enclosed by brackets. Original publication, reprint, and revision details follow full bibliographic entries where relevant. Web locations for online resources were current at time of submission.

Italic page numbers indicate material in a figure caption; roman numbers, material in the text and tables. Specific reservations and reserves are indexed under their respective individual names. All variant names of ethnic and tribal groups listed in the text are indexed, providing the most common contemporary equivalent. All variants of group names that differ from those cited only in their capitalization, hyphenation, or accentuation have generally been omitted and have been collapsed into a single entry.
